

CABLE SPLICING - GENERAL

BONDING ACROSS SHEATH OPENINGS

NOTES CONCERNING THIS ADDENDUM

This addendum supplements Section G50.610.1 with instructions for placing a temporary bond to an adjacent cable as well as across the sheath opening in underground construction, and instructions for placing temporary bonds when working on dead cable.

"See Addendum" should be marked in Section G50.610.1 to indicate the following.

- Paragraph 2.01 - Replaced.
- Paragraph 2.04 - Added.

2. RULES

- 2.01 All sheath or splice openings including openings in working cable, dead cable and terminal stubs should be bonded except at an insulated joint.
- 2.04 In addition to the bond across the sheath opening, in underground construction a temporary bond shall be placed between the cable in which the electrical continuity of the sheath has been broken and another telephone cable in the manhole.
