

SPLICER'S HANDLINES

NOTES CONCERNING THIS ADDENDUM

This Addendum contains information relative to the use of Splicer's Aerial and Underground handlines for raising and lowering Soldering Coppers.

The cross-reference "See Addendum" should be marked in Section G82.380.1 after Paragraph 1.01 to indicate the addition of new information.

1. GENERAL

1.02 The standard soldering copper may be raised and lowered with the Aerial or U.G. handline by placing the copper in the open hook, point down. The hook is so designed that the handle of the soldering copper will wedge itself against the throat of the hook.
