

PRESSURE TESTING TOOLS

B GAS REGULATORS

NOTES CONCERNING THIS ADDENDUM

This addendum supplements Section G85.142.2 and provides precautions that are to be taken when B Regulators are likely to become submerged in water.

The cross reference "See Addendum" should be written following Paragraph 3.04 to indicate the addition of new information.

3. OPERATING INSTRUCTIONS

3.05 At locations where B Regulators are likely to become submerged, the supply of gas in the nitrogen tanks must be carefully watched to ensure a normal gas discharge through the bleeding vent of the regulator. If tanks are permitted to empty and the regulator becomes submerged, it is possible for water to enter the instrument as well as the cable through the vent opening.
