Functional Groups and Functionalities marked as INACTIVE are not Generally Available to the Meridian Supernode Market due to reasons 1 and/or 2.

1.  Only  the base functionality of this feature is present in the load but is required in the load for software interdependencies.
2.  The functionality has previously  not been offered to the MSL market and has not been verified for MSL specific hardware interactions. e.g. DLM and IPE.

Shaded sections indicate new functionalities or ordering options that are introduced with the MSLI0015 release.
