Carrier Voice over IP Fault Management Logs Reference (volume 1)

> **ATTENTION**
> The Carrier Voice over IP Fault Management Logs Reference document uses six volumes to describe logs that Succession Portfolio components can generate. Not all components apply to every solution.

A log report is a message about an important conditions or events related to Succession portfolio component(s) performance. Log reports include, but are not restricted to, the following information:

- state and activity reports

- changes in state

- hardware or software errors

- test results

- other events or conditions that affect performance

  Note: Both system actions and manual overrides can generate log reports.

Log formats

The log formats shown in this volume display in either NT or SCC2 standard formats. Not every format that generates from the core appears in a log report. Consult the latest software load that accompanies your product for a complete list of log formats.

In this volume

Volume 1 contains the Succession Audio Provisioning Server logs. The table in this volume identifies and briefly describes the logs they use. Double-click on the log identifier to see the log details.

Audio Provisioning Server

The following table lists the individual logs that the Audio Provisioning Server (APS) generates.

APS logs (Sheet 1 of 7)

Log ID	Description
26625	Software exception
26626	SQL exception
26627	Error while accessing the DB
26628	Null value for: %s
26629	Error creating user: %s
26630	Error creating directory: %s
26631	Error creating node: %s
26632	Error removing node: %s
26633	Error updating host file: %s
26634	Node not enabled: %s
26635	Invalid program group: %s
26636	Invalid segment id: %s
26637	Invalid package id: %s
26638	Invalid PE Type: %s
26639	Invalid selector type: %s
26640	Invalid selector value: %s
26641	Invalid provisionable set: %s
26642	Invalid node id: %s
26643	Invalid user id: %s
26644	Invalid sys parm value: %s
26645	Invalid entity: %s of entity type: %s

APS logs (Sheet 2 of 7)

Log ID	Description
26646	Invalid old password for user: s%
26647	Callp Selector value: %s is not unique
26648	Program group: %s is not unique
26649	Provision set: %s is not unique
26650	Selector type display value: %s is not unique
26651	User: %s has no access to program group: %s
26652	Selector type: %s already exists
26653	Selector value: %s already exists
26654	Association already exists between %s and %s
26655	Exit code: % while changing permission on: %s
26656	Exit code: % while removing node: % from %s
26657	Exit code: % while removing userdir for user: %s
26658	Inconsistent array sizes between %s and %s
26659	CallP value: %s is not unique
26660	Selector value: %s is not unique
26661	Selector type display value: %s is not unique
26662	Invalid AE Type: %s
28673	Software exception: %s
28674	SQL exception: %s
28675	Error while accessing the DB
28676	User: %s, Group: %s - is beginning a session at: %s
28677	User: %s, Group: %s - is ending a session
28678	User: %s, Group: %s - status is not active

APS logs (Sheet 3 of 7)

Log ID	Description
28679	User: %s, is uploading files
28680	Error while reading from: %s
28681	Error while writing to file: %s
28682	Error while deleting: %s
28683	Invalid file or directory: %s
28684	Directory created: %s
28685	New generated seg id: %s
28686	Seg id released: %s
28687	New generated package id: %s
28688	Package id released: %s
28689	Max number of versions reached for physseg id: %s
28690	Max version number exceeded for physseg id: %s
28691	Max number of versions reached for pkg id: %s
28692	Max version number reached for pkg id: %s
28693	Max set depth reached for set id: %s
28694	Max sequence depth reached for seq id: %s
28695	No segments in the database
28696	Invalid segment id: %s
28697	Invalid phys segment id: %s, ver: %s
28698	Invalid package id: %s, ver: %s
28699	Invalid PE Type: %s
28700	Invalid program group: %s
28701	Invalid selector type: %s

APS logs (Sheet 4 of 7)

Log ID	Description
28702	Invalid selector value: %s
28703	Zip archive extracted: %s
28704	Infinite loop in set id: %s
28705	Infinite loop in sequence id: %s
28706	Seg id: %s is not unique
28707	Alias: %s is not unique
28708	Selector value: %s is not unique
28709	Seg id %s and alias %s are not unique
28710	No permission to set cache for user: %s
28711	No permission to change lock status for user: %s
28712	Seg id: %s cannot be added to locked package: %s
28713	Invalid package format, segment id: %s cannot be added to package: %s
43009	Software exception:
43010	SQL exception: %s
43011	IO file error: %s
43012	Connected to host IP: %s
43013	Could not connect to host IP: %s
43014	Could not change directory to: %s
43015	File %s could be not transferred
43016	ZIP archive extracted: %s
45058	Session timer expired: %s
45059	Software exception: %s

APS logs (Sheet 5 of 7)

Log ID	Description
45060	RMI exception: %s
45061	Error while accessing the DB
45062	Invalid OpCode: %s
47105	The langver.dat file was not able to be provisioned
47106	The provisioner experienced early termination
47107	A specified node was not provisioned
47135	A file cannot be accessed
47203	A segment was not able to be provisioned
The provisioner cannot run on $(hostname) because it is not the primary server	The provisioner cannot run on $(hostname)
The specified node ($NODE_ID) is not a configured node on $(hostname)	The specified node ($NODE_ID) is not a configured node
Problems on $(hostname) transferring files for node $NODE	Problems on $(hostname) transferring files
The last prov date for the node $NODE cannot be updated on $(hostname) because the database is not accessible	The last prov date for the node $NODE cannot be updated

APS logs (Sheet 6 of 7)

Log ID	Description
A full provisioner process cannot be run when another full provision is already in progress on $(hostname)	A full provisioner process cannot be run
A full provisioner process has timed out waiting for a node-specific provisioner process to complete on $(hostname)	A full provisioner process has timed out
A node-specific provisioner process cannot be run on $(hostname) because a full provision is already in progress	A full provisioner process in progress
A node-specific provisioner process cannot be run on $(hostname) because another provision process is already running for that node	Another provisioner process is already running on a node

APS logs (Sheet 7 of 7)

Log ID	Description
The provisioner cannot run on $(hostname) because the file system ($IpsProvPath) is full	The provisioner cannot run because the file system is full
The $IpsProvPath file system on $(hostname) is almost full. The provisioner will not be able to run if corrective action isn't taken	The $IpsProvPath file system on $(hostname) is almost full
The provisioner cannot run on $(hostname) because the database is inaccessible	The provisioner cannot run on $(hostname) because the database is inaccessible
The specified node ($NODE_ID) either does not have provisioning enabled or else does not have a provision set assigned to it on $(hostname)	The specified node ($NODE_ID) does not have provisioning enabled

Supplementary logs

The following documents reference logs and/or alarms that do not appear in this volume:

Note: The terms Passport, PVG and MDM have been re-branded in conjunction with the new Nortel Networks' brand simplified naming format. Passport is now referred to as the Nortel Networks Multiservice Switch, PVG is now the Nortel Networks Media Gateway 7480/15000, and MDM is now the Nortel Networks Multiservice Data Manager.

- For USP logs, refer to the *Log and Operational Measurement Descriptions for Universal Signaling Point (USP),* version 3.0.3. These logs also appear on the Graphical User Interface (GUI).

- For XA-CORE logs, refer to the *XA-Core Reference Manual*, 297-8991-810.

- For information about Multiservice Switch alarms associated with your component, refer to *Nortel Networks Multiservice Switch 7400/15000/20000 Alarms Reference*, NN10600-500 and *Nortel Networks Multiservice Switch 15000, Media Gateway 15000 and Preside MDM in Succession Networks Fault Management Overview PT-AAL1/UA-AAL1/UA-IP*, NN10092-911.

For information about Passport 8600 logs and traps, refer to the following documents:

- *Preside Passport 8600 Device Integration Cartridge User Guide*, 241-6003-110.

- *Configuring Network Management- Passport 8000 Series Software Release 3.5, 314723-B.*

- *System Messaging Platform Reference Guide- Passport 8000 Series Software Release 3.5, 315015-B*.
