                         NAV CONTROLLER BAY

PEC CODE: NTZZ51AB

CPC CODE: B0242317

RATING: Standard

REPLACES: Not Applicable

REPLACED BY: Not Applicable

ABBREVIATION NAME: CONT

ENGINEERING DESCRIPTION: The NAV Controller Bay is a C28 cabinet with
                           doors front and rear for EMI compliance.
                           Cables may enter either at the top for cable
                           trough configurations or from the bottom for
                           raised floor configurations.   The NAV Con-
                           troller Bay can be configured with two (2)
                           different controller types: Operations and
                           Service.   Modem Shelves can also be mounted
                           in the NAV Controller Bay.

NTZZ51AB EMB19-04-003 CHANGE HISTORY

Engineering Manual Section Change History		
DATE	DOCUMENT	REASON
95 12 07	ECM 699 01	Initial Release.
96 06 05	ECM 699 02	PER EC 018-48057 - INTEGRATED SERVICE CONTROLLER Removed Integrated Service Controller as a valid product offering. - OPERATIONS CONTROLLER MD NTZZ51DB. Replaced by NTZZ51DE. SCSI Terminator and Disk/DAT now AP SCSI Cable now always required. Removed NTFX75BA and NTFX76BA as valid OC MSP Processors. NTFX76BA MD. Removed SCSI-II Terminator. Changed MSP rule to show it as always required. Reduced number of possible VME SCSI from 3 to 1. Removed FDDI Routing Kit Hardware, NTFX5505 and added to NTZZ51PA as AP. Changed Filler CP and TM locations. Removed NTFX30DA, NTFX61EA and NTFX61FA SCSI disk options. Changed SCSI Terminator rules. Expanded IOC RS232 rule. - UNIX-BASED SERVICE CONTROLLER Renamed by adding UNIX-Based. MD NTZZ51EB. Replaced by NTZZ51EC. Serv. Proc. TM MSP, NTFX91BA is now AP Added AS and NVAS application labels. Changed SP, TM RSP, SCSI Jumper Cable, & SCSI Cable locations. MD NTFX76BA. MD NTFX30DA and NTFX61DA SCSIs. Changed VME Disk TM Kit locations. Added FDDI slot location 7. Changed IOC V.35 locations from 3-16 to 3-5,7,9,11,13,15. Changed SCSI-II Terminator location rule from 10 to 11R. Expanded IOC RS232 and DTL rules. Changed number of BRI provisionable from 12 to 6 and expanded BRI rule. Changed BRI, OSP, and NME CP locations

Engineering Manual Section Change History		
DATE	DOCUMENT	REASON
		Changed Filler CP and TM locations.
		– MODEM SHELF
		Removed Modem Shelf Side Cover from NTZZ51GA and made it provisionable.
		– PERIPHERAL EQUIPMENT
		Added NTFY10AA, NTFY10AD, NTFY10AE, and NTFY10AF kits and MD Peripheral Building Blocks.
		Added rule for provisioning Modem 9600 Dial-Up independently from a Remote Dialup X.11 Term. Kit due to application requirements.
		Added VT320 Terminal and Iso. Kit.
		Removed Local X.11 Terminal rule as it connects directly to LAN Bay HUB.
		– OTHER
		Removed NTRX2567, NTRX2568, NTRX55BA, and NTRX2523 since they are provisioned on NTRX25AA EMS.
		Added Notes 2 – 4.
		Added NTRX40BA as AP-02 item.
		Added requirement for Modem Shelf to always be provisioned in the same bay as the OC.
96 12 03	ECM 699 04	PER EC 018-49303
		– NAV Bay changes:
		Change Blank Bulkhead Plate locations in equipment list and Rul 2.6.
		– Operation Controller Shelf changes:
		Add PEC codes in rules per request from manufacturing.
		Flag 9 Pin Cover Plate and Mounting Screws as non-provisioned.
		Add reference to Note 6 in rule 4.
		– Service Controller Shelf changes:
		Add PEC codes in rules per request from manufacturing. Flag NT0X98AC cable in equipment list. This cable shall be provided per information in the CAFX50BA cable drawing.
		Add NTFX82CA IOC V.35 TM to UNIX base Controller equipment list.
		Flag 9 and 25 Pin Cover Plates and

Engineering Manual Section Change History		
DATE	DOCUMENT	REASON
		Mounting Screws as non-provisioned. Correct SCSI Jumper Cable terminations to CP POS 2R, 3R, 6R, 7R, 8R and 12R. Add VT320 Terminal and Isolation kit to equipment list as referenced in rule 6. Add reference to Note 6 in rule 5. - Per EC 018-48646 MD SC shelf Generic labels. - Modem Shelf changes: Add PEC codes in rules per request from manufacturing. Flag NT0X98AJ cable in equipment list. This cable shall be provided per information in the CAFX50BA cable drawing. Flag 25 Pin Cover Plate and Mounting Screws as non-provisioned.
97 03 23	ECM 699 05	Changes to this issue include: - Update EMS for NAVB005 hardware per EC 06-29644: - OC Shelf changes: Add NTZZ51DG OC Building Block. Add 5.0GB SCSI PEC to equipment list. Added note D regarding the OC shelf building blocks. - SC Shelf changes: Add ADAS Plus SC labels. Add AIX SC shelf equipment list. Re-assigned RUL 2.X numbers to add AIX info. - Modem Shelf changes: Added Universal 64k modem to equipment list. Flagged A0609601 Universal modem. Added NTFY01AA Universal 64k modem equipment list and updated RUL 7 with provisioning info. Added note G. - Peripheral Eqpt. changes: Updated notes A and C regarding stand-alone modems. Added Added A0376839 VT520 Terminal to equip. list and MD'ed A0345171 VT320 Terminal. Other changes:

Engineering Manual Section Change History		
DATE	DOCUMENT	REASON
		Added BIX panel information to notes. – OC Shelf changes: Corrected NTFX30FA PEC description. Added configuration ID #'s to OC rules. – SC Shelf changes: Removed all equipment references to NTFX75BA processors. Added configuration ID #'s to SC rules. Corrected NTFX30FA PEC description. Corrected NTFX76DA and NTFX91RA slot locations. Changed NTFX29AA TM slot locations. – Peripheral Eqpt. changes: Updated note F regarding interbay cabling.
97 06 20	ECM 699 06	Changes to this issue include: – OC Shelf changes: Clarified SCSI notes. – SC Shelf changes: Corrected label name for ADAS Plus. Clarified SCSI notes. Updated Rules to include VME SCSI positioning and cabling. Changed max. OSP quantity. Updated UNIX based SC shelf and AIX based SC shelf abbreviations to reflect USC and ASC respectively. – Modem Shelf changes: Added abbreviation (DSM) to modem shelf as requested by Can. SAE group. – Peripheral Eqpt. changes: Added new information regarding the rollup terminal and cabling. – Other changes: Added note 7 to list the new hardware that is introduced as part of NAVB005

Engineering Manual Section Change History		
DATE	DOCUMENT	REASON
		to help users distinguish between NAVB003 and NAVB005 hardware. Added new NAV shelf power redundancy information to include modem shelves and updated existing information for OC and SC shelf power redundancy.
97 08 15	ECM 699 07	Changes to this issue include: - OC Shelf changes: Removed reference to NTFX67AA filler TM in Rul4.5. This item is supported by Rul4.8. - UNIX SC Shelf changes: Per EC 018-51232, MD'ed NTZZ51MA. Removed reference to NTFX67AA filler TM in Rul5.4, Rul5.5, and Rul5.6. This item is supported by Rul5.18. Add NAV Base 002 SC shelf equipment and rules to EMS to allow NAV Base 002 SC shelf extensions. ECM 697 and EMSs NTFX55BA and NTZZ51AA have been MD'ed. ECM 699, EMS NTFX55BB and NTZZ51AB will support NAV Base 002 SCs for shelf extensions only. - AIX SC Shelf changes: Removed reference to NTFX67AA filler TM in Rul6.3, Rul6.4, and Rul6.5. This item is supported by Rul6.9. - Other changes Removed reference to the NTFX77DA PowerPlus Processor. This processor will NOT be introduced with NAVB005.
97 09 22	ECM 699 08	Changes to this issue include:

Engineering Manual Section Change History		
DATE	DOCUMENT	REASON
97 10 03	ECM 699 09	Per EC 018-51480, the NTFX75BA and the NTFX75CA processor cards have been manufactured discontinued. The NTFX76CA processor card replaces the NTFX75BA and the NTFX75CA for NAV Base 003 and up. - Other changes Clarified slot reference in Rule 6 for the NTFX77UA and NTFX77VA PowerPC processors. Changes to this issue include: - Per EC 018-51518, the NTFX86AA SS7 CP, NTFX89AA SS7 TM and associated cables NTFX8990/91 are being removed as orderable items from the controller bay NTFX55BB. These items will be orderable as part of the NTFX55CA NAV SS7 Server Bay. - Removed reference to SS7 equipment in Rules 6 and 7. - Added WVAD labels to equipment list. - Removed NTFX76CA as an orderable processor for the NAV Base 2 SC shelf. This processor is not supported by the NAV Base design team for use with NAV Base 2.

The NAV Controller Bay is comprised of the following:

DEV – DEVELOPMENT. These products are in the development phase. Please contact NPPM prior to ordering.

A&M – ADDITIONS & MAINTENANCE. These products can only be ordered if they are already in use in that office.

MD – MANUFACTURED DISCONTINUED. These products are no longer manufactured and cannot be ordered.

NOTE A) The NTZZ42KB IOC V.35 building block has been replaced with the NTZZ42KD IOC V.35 building block for NAV Base 003 applications. The NTZZ42KB is still valid for NAV Base 002 applications.

NOTE B) The NTZZ42KB and NTZZ42KD building blocks contain the NTFX82BA IOC V.35 transition module. The NTFX82BA will be manufactured discontinued once existing stock has been depleted. It will be replaced with the NTFX82CA. The NTZZ42KB and NTZZ42KD will be replaced with the NTZZ42KC building block at that time.

NOTE C) The A0609601, Universal rack-mounted modem will be replaced by the NTFY01AA 64kbit/s rack-mounted modem once existing stock has been exhausted. In cases where modems are required for SS7 applications, the NTFY01AA modems must be ordered. Do not order the NTZZ51NA Building Block for use with SS7 applications.

NOTE D) The NTZZ51DE Building Block contains the NTFX61BA SCSI DISK/DAT. The NAVB005 introduces the optional NTFX61GA SCSI Disk/DAT. This makes the SCSI Disk/DAT an option for the OC shelf. The NTZZ51DG Building Block provides the OC shelf without a SCSI Disk/DAT. Both Building Blocks are available; however, the NTZZ51DE will be MD'ed once NAVB005 reaches a Gate 2A status.

NOTE E) The NTZZ51QA Building Block will be MD'ed once NAVB005 reaches a Gate 2A status. For VME SCSI Disk Kit ordering, order the NTZZ51QB Functional Block.

NOTE F) The NTFX75BA and NTFX75CA processors have been manufactured discontinued. The NTFX76CA replaces these processors for NAV Base 3 applications and above. This means that for NAV Base 2 SC shelf extensions there is no qualified processor available. NAV Base 2 sites should be upgraded to NAV Base 5 to align with the latest NAV Base hardware baseline.

NOTES:

1) The NTZZ51AB has system level provisionable items covering the following.

   * Seismic Zone provisioning

   * Grounding options provisioning

   * Cable routing options provisioning

   * Cabinet door provisioning

   For details of the above refer to the Modular Structure Document MSRX25AA, C28 Cabinet Mechanical Assembly.

2) If the lineup has an OC shelf, then the size and configuration of the lineup is limited by the following three factors:

   * The total number of controller and LAN bays plus SC shelves should not exceed 32.

   * The maximum RS-232 cable length from OC to termination is 9.1 m (30 ft).

   * The maximum number of shelves is 24 service controller shelves and 1 operations controller shelf.

3) RS-232 IOC notes:

   * Every bay requires one RS-232 link for its RSL link.

   * Every shelf requires one RS-232 link for its console port.

   * Printers and dial-up terminals require one RS-232 link for each port.

4) 9 and 25 pin Cover Plates are to be installed by manufacturing to fill any empty positions in the Bulkhead Connector Plates and do not need to be job engineered.

5) A BIX panel (A0321335) and at least two df blocks (customer's preference) are required for each NAV office. Reference cable drawing CAFX50BA for termination information.

6) Some NAV circuit packs require specific configurations depending on the slot location. Circuit pack ID #'s are pro-

vided in the NAV provisioning rules where applicable. Engineering shall reference these circuit pack configuration ID #'s in the COEO documentation that is forwarded to the Installation group. Installation will use this information for NAV software commissioning.

7) The following hardware items have been added to this EMS as part of NAVB005 (NAV Base):

* NTFX61GA - 5.0/2.0 GB disk/DAT module

* NTFX77UA - PowerPC service processor

* NTFX77VA - PowerPC service processor

All other items listed in the EMS equipment list are part of the NAVB003 hardware unless otherwise noted (ie. NAVB002 SC shelf). NAVB003 and NAVB005 hardware are used together to provide NAVB005 functions. The rules provided in this EMS will allow the user to determine when to use items specific to NAVB002 and NAVB005.

RULES:

AP   1) When PEC NTZZ51AB is ordered, these items are provided.

AP-01 1) When a NTFX55BB NAV Controller Bay is ordered these items are Always Provided.

AP-02 1) When a NTFX5510 Modular Supervisory Panel is ordered these items are Always Provided.

RUL1   1) Provide two (2) each Door Labels, either Center-Latch (P0725505) or Top-Latch (P0800785) for each NAV Controller Bay. Center-Latch Doors and Labels should be used for bays in new line-ups. Top-Latch Doors and Labels should only be used on bays installed in existing line-ups that already have top-latch doors. The Doors themselves are provisioned per NTRX25AA Eng. Manual Section.

For Grey Doors, provide two (2) each of the following labels:

        Cabinet Door Label (Left) (P0725507)
        Bay Number Label (P0739060)
        Shelf Designation Label (P0800786)

Brown Doors on the NAV Controller Bay are presently not available as an option.

RUL2   1)   Provide a maximum of four (4) shelves in each NAV Control-
            ler Bay. Provide the appropriate amount of shelves and la-
            bels based on the valid shelf positions shown below:

       *   Operations Controller (SH POS. 50)

       *   Service Controller, UNIX or AIX based, (SH POS.
            50,37,15,02)

       *   Service Controller (NAVB002) EXTENSIONS ONLY (SH POS.
            50,37,15,02)

       *   Modem Shelf (SH POS. 05,18,40)

If two redundant Service Controller shelves are in the same bay, they must be in either shelf positions 1 and 4 or 2 and 3. In this way, each shelf of the redundant pair will use a different power feed and a different breaker. If redundant Service Control- ler shelves are in more than one bay, they must be provisioned evenly across power feed A and power feed B. This rule does not apply to NAV Base 2 configurations.

To ensure power redundancy, controller shelves and modem shelves must be assigned in the following sequence in each NAV cabinet equipped with an OC shelf:

*   OC shelf = shelf 1 (50 inches from floor)

*   modem shelf #1 = shelf 4 (2 inches from floor)

*   modem shelf #2 = shelf 3 (15 inches from floor)

*   modem shelf #3 = shelf 2 (37 inches from floor)

*   NAV SC shelf #1 = shelf 2 (37 inches from floor)

*   NAV SC shelf #2 = shelf 3 (15 inches from floor)

*   NAV SC shelf #3 = shelf 4 (2 inches from floor)

Unused shelf positions must be filled with NAV air plenums.

This power redundancy rule does not apply to NAV Base 2 config- urations.

Note: The OC shelf is always located in position 50" of first controller bay.

For NAV cabinets that are not equipped with an OC shelf, contoller shelves and modem shelves must be assigned in the following sequence:

*   NAV SC shelf #1 = shelf 1 (50 inches from floor)

*   NAV SC shelf #2 = shelf 4 (2 inches from floor)

*   NAV SC shelf #3 = shelf 2 (37 inches from floor)

*   NAV SC shelf #4 = shelf 3 (15 inches from floor)

*   modem shelf #1 = shelf 4 (2 inches from floor)

*   modem shelf #2 = shelf 3 (15 inches from floor)

*   modem shelf #3 = shelf 2 (37 inches from floor)

Unused shelf positions must be filled with NAV air plenums.

This power redundancy rule does not apply to NAV Base 2 configurations.

2) The Integrated Controller is no longer a valid offering; DO NOT ORDER.

3) An Operations Controller (OC) shelf is always required in a single- or multi-application lineup. Provide the following items for each Operations Controller:

        QTY (1) Operations Controller Shelf Building Block
                (NTZZ51DG)

4) Provide the following items for each UNIX Based Service Controller:

        QTY (1) NAV Service Controller Shelf Building Block
                (NTZZ51EC)

    Provide the following labels for each Service Controller based on its application:

        QTY (1) AS Shelf Front Label   (P0840178)

```
                    -for AS Shelf
                    QTY (1) AS Shelf Rear Label        (P0814666)
                    -for AS Shelf
                    QTY (1) ADAS Plus SC Front Label   (P0867862)
                    -for ADAS Plus Shelf
                    QTY (1) ADAS Plus SC Rear Label    (P0867863)
                    -for ADAS Plus Shelf
                    QTY (1) ADAS Plus Backup Shelf
                    Front Label                        (P0867864)
                    -for ADAS Plus Backup Shelf
                    QTY (1) ADAS Plus Backup Shelf
                    Rear Label                         (P0867873)
                    -for ADAS Plus Backup Shelf
                    QTY (1) ADS Msg. Contr. Front Label (P0818357)
                    -for ADS Shelf
                    QTY (1) ADS Msg. Contr. Rear Label  (P0818358)
                    -for ADS Shelf
                    QTY (1) ADS Att. Contr. Front Label (P0818359)
                    -for ADS Shelf
                    QTY (1) ADS Att. Contr. Rear Label  (P0818360)
                    -for ADS Shelf
                    QTY (1) ADS Database Front Label   (P0818361)
                    -for ADS Shelf
                    QTY (1) ADS Database Rear Label    (P0818362)
                    -for ADS Shelf
                    QTY (1) NVAS SC Front Label        (P0834745)
                    -for NVAS Shelf
                    QTY (1) NVAS SC Rear Label         (P0834746)
                    -for NVAS Shelf
                    QTY (1) NVAS App. Front Label      (P0804147)
                    -for NVAS Shelf
                    QTY (1) NVAS App. Rear Label       (P0804148)
                    -for NVAS Shelf
                    QTY (1) WVAD SC Front Label        (P0874791)
                    -for WVAD Shelf
                    QTY (1) WVAD SC Rear Label         (P0874792)
                    QTY  WVAD Shelf
```

5) Provide the following items for each AIX Based Service Con-
    troller:

        QTY (1) NAV Service Controller Shelf Building Block
               (NTZZ51EC)

6) NAVB002 Service Controllers can be configured as Standard,
    Redundant, or Backup. A Backup Service Controller must be
    mounted directly beneath the Redundant Service Controller
    it is paired with. Provide the following items for each
    NAVB002 Service Controller:

QTY (1) NAV Shelf Assembly
QTY (1) Serv. Contr. SH ID Label
QTY (1) Serv. Contr. Cable Kit
QTY (1) Shelf Mounting Hardware Kit
QTY (1) Service Proc. TM MSP (Slot 01R)
QTY (1) SCSI Terminator at Connector P4
         of PWR SCSI Backpanel on SC Shelf.
QTY (2) SCSI Terminator Screws
QTY (1) Time Slot Interchange (Slot 21)
QTY (1) Power Converter (Slot 23)

Provide the following labels for each Service Controller
based on its application:

QTY (1) ACMS Shelf Front Label   (for ACMS Shelf)
QTY (1) ACMS Shelf Rear Label   (for ACMS Shelf)
QTY (1) ADAS+ Database Front Label (for ADAS+ Shelf)
QTY (1) ADAS+ Database Rear Label   (for ADAS+ Shelf)
QTY (1) ADAS+ Redundancy Fr Sh Lbl (for ADAS+ Shelf)
QTY (1) ADAS+ Redundancy Rr Sh Lbl (for ADAS+ Shelf)
QTY (1) ADAS+ Backup Fr Shelf Label (for ADAS+ Shelf)
QTY (1) ADAS+ Backup Rr Shelf Label (for ADAS+ Shelf)
QTY (1) ADS Msg. Contr. Front Label (for ADS Shelf)
QTY (1) ADS Msg. Contr. Rear Label (for ADS Shelf)
QTY (1) ADS Att. Contr. Front Label (for ADS Shelf)
QTY (1) ADS Att. Contr. Rear Label (for ADS Shelf)
QTY (1) ADS Database Front Label   (for ADS Shelf)
QTY (1) ADS Database Front Label   (for ADS Shelf)
QTY (1) ADS Database Rear Label   (for ADS Shelf)
QTY (1) AS Shelf Front Label   (for AS Shelf)
QTY (1) AS Shelf Rear Label   (for AS Shelf)
QTY (1) NVAS SC Front Label   (for NVAS Shelf)
QTY (1) NVAS SC Rear Label   (for NVAS Shelf)
QTY (1) NVAS App. Front Label   (for NVAS Shelf)
QTY (1) NVAS App. Rear Label   (for NVAS Shelf)

Note. A NAVB002 Service Controller Shelf can ONLY be or-
dered as an EXTENSION to an existing NAV Base 002 Control-
ler Bay (NTFX55BA). DO NOT order an NAVB002 SC shelf as
part of a NAV Base 003 or 005 Controller Bay (NTFX55BB).
The power redundancy rules listed above may not be applica-
ble to the NAVB002 SC or the NAV Base 002 Controller Bay.
However, whenever possible, the extension shelf or shelves
should be provisioned evenly across the power feeds.

7) Provide the following items for each Modem Shelf:

QTY (1) Modem Shelf Building Block (NTZZ51GA)

QTY (2) Modem Shelf Side Cover (P0806648)
QTY (2) Modem Shelf Air Plenums (NTFX5511)
QTY (2) Shelf Mounting Hardware Kit (NTFX5501)

8) Provide a Blank Bulkhead Plate (P0725637) for each shelf
    position not occupied by a NAV shelf or a modem shelf.
    Bulkhead locations are specified as 50LE, 37LE, 15LE, and
    02LE.

RUL3   1) The Integrated Controller is no longer a valid offering. Do
           not provision.

RUL4   1) Always provision one Operations Controller Shelf (NTZZ51DG)
           for each single- or multi-application lineup.   The Oper-
           ations Controller Shelf has (21) slots in front for cards
           and (17) slots in rear for transition modules. These cards
           and transition modules shall be assigned in the following
           priority order: MSP, SCSI, VME SCSI, FDDI, IOC RS232,
           Filler.

           Fill each slot (front and rear if applicable) in priority
           order.   If a slot is already provisioned use the next
           available slot for that item.

       2) The MSP is the Master Service Processor for the shelf. Al-
           ways provide one (1) per shelf in Slot 01.   Provide the
           following items for each MSP required:

               QTY (1) Service Proc. 50MHz/64MB (NTFX76CA) or
                                     50MHz/128MB (NTFX76DA)
                            (slot 1 for 1-slot MSP)
                             (slot 1-2 for 2-slot MSP)
           The Service Proc. 50MHz/128MByte (NTFX76DA) requires two
           card slots (01 and 02), all other Service Processors re-
           quire only one.

           The MSP for the OC shelf shall use configuration ID #1.

3) The SCSI Disk/DAT unit provides storage for the OC shelf.
    Always provide one (1) SCSI per OC shelf in slot 22.

        QTY (1) SCSI Disk/DAT   2.4GB Disk/DAT (NTFX61BA)
                                  or
                                  5.0GB/2.0GB Disk/DAT (NTFX61GA)
                                        (slot 22)

4) Always provide one (1) SCSI Cable (NTFX8586) since a SCSI
    Disk is always required for the OC shelf. One end connects
    to Connector P5 of the PWR SCSI Backpanel on the OC Shelf.
    To minimize the length of the SCSI bus, the other ends ter-
    minates on whichever of the following devices is closest:
    MSP or VME SCSI.   The possible terminations of the other
    end of the SCSI Cable are:

    *   Slot 1R (bottom connector) on the TM MSP, if either a
        single-slot or double-slot MSP is provisioned and no
        VME SCSI Disk is provisioned.

    *   Slot 6R (bottom connector) on the VME SCSI TM, if a VME
        SCSI Disk is provisioned.

5) The VME SCSI gets its power from the NAV backplane.   If
    needed, provide a maximum of one (1) VME SCSI per OC shelf
    in slot 4. A VME SCSI Disk occupies three (3) consecutive
    slots.   The VME SCSI TM occupies two (2) consecutive rear
    slots. A Filler TM card occupies slot 4R.   Provide the
    following items for each VME SCSI required:

        QTY (1) VME SCSI Disk   2.4GB Dual Disk (NTFX30EA)
                                  or
                                  4.0GB Dual Disk (NTFX30FA)
                                        (slot 4-6)
        QTY (1) VME Disk TM Kit (NTZZ51QB)

    When the VME Disk TM Kit is used on the OC Shelf:

    *   The VME SCSI TM (NTFX29AA) occupies slots 6R-5R.

    *   The SCSI Jumper Cable (NTFX8587) goes from slot 6R to
        1R.

6) The FDDI supports fiber digital distribution interface. If
    needed, provide a maximum of one (1) per shelf in Slot 3.
    Provide the following items for each FDDI required:

        QTY (1) FDDI Kit (NTZZ51PA)

The FDDI for the OC shelf shall use configuration ID #1.

When FDDI CP in slot position 3 is not ordered, provide (2) FDDI Filler Plate (P0806649), (4) Tapping Screw (P0556309), (4) Lock Washer (P0567201), and (4) Nut (P0298849). These items shall be mounted in the the associated OC shelf FDDI bulkhead locations by manufacturing per instructions in the ADFX55BB assembly drawing.

7) The IOC RS232 supports eight (8) RS232 interfaces at up to 19.2 Kbit/s. One IOC (RS-232) kit is always provided on the OC shelf, slot 17, for maintenance links, controller shelf console ports, and modem links. Additional IOC RS232 may be provisioned, up to a maximum of four (4) per shelf in Slots 10, 15, 13, and 11. The always provided IOC RS232 (slot 17) and the IOC RS232 provisionable in slots 15, 13, and 11 have their associated cables terminate on the bulkhead. The IOC RS232 that is provisionable in slot 10 must be terminated to a modem shelf in the same bay.

When provisioning an IOC (RS-232) kit in an Operations Controller for printers and terminals, determine where the modem shelf will reside. If the modem shelf resides in the same bay as the OC shelf, then install the IOC card and IOC TM card in slot 10 and provision eight (8) 9-25 Pin Adapter Cables (NTFX8550). Otherwise, install the IOC card and IOC TM cards in slot 15. The IOC (RS232) card in slot 17 then becomes the printers and terminals controller. Provide the following items for each IOC RS232 required:

    QTY (1) I/O Controller RS232 Building Block (NTZZ42LA)

The configuration ID #'s for IOC RS-232 located in the OC shelf are:

    Slot 10 shall use ID #1
    Slot 17 shall use ID #2
    Slot 15 shall use ID #3
    Slot 13 shall use ID #4
    Slot 11 shall use ID #5

Note. If slot 10 is not populated with an IOC card, then slot 17 shall use ID #1, slot 15 shall use ID #2, slot 13 shall use ID #3 and slot 11 shall use slot ID #4.

The IOC kits that are wired to the bulkhead can perform all functions: shelf console links, bay RSL links, and printer/terminal functionality. However, doing so requires interbay cabling for the modem shelf (cabling for a shelf

in a different bay). In addition, the total capacity of
shelf console links and RSL links is reduced to 8 - n,
where n is the number of ports required for printers and
terminals. This means that only two more IOC (RS-232) kits
can be provisioned for these links (installed in slots 13
and 11) for a total of 3 instead of 4. Nothing can be in-
stalled in slot 10 in this case, only filler cards. This
configuration should only be used for small lineups (1 or 2
bays) and if there is no anticipated lineup growth for the
application in question.

If an IOC RS-232 kit is provisioned in slot 10 of the OC,
then at least one modem shelf must be provisioned in the
same controller bay equipped with the OC and eight (8) 9-25
Pin Adapter Cables (NTFX8550) must be provisioned. If no
IOC RS-232 kit is installed in slot 10, then the modem
shelf can reside in any LAN bay or controller bay.

8)   Provide one (1) Filler CP (NTFX66AA) for every Slot 02-21
      of the Operations Controller Shelf not filled by cards, and
      provide one (1) Filler TM (NTFX67AA) for every Slot 01R-16R
      of the Operations Controller Shelf not filled by transition
      modules.

RUL5 1)   The UNIX-Based Service Controller Shelf, NTZZ51EC, (soft-
            ware name = General Controller (GC) or Media Controller
            (MC)) has (21) slots in front for cards and (17) slots in
            rear for transition modules. These cards and transition
            modules shall be assigned in the following priority order:
            MSP, RSP (2-slot), SCSI, VME SCSI, External IOC RS-232 (ca-
            bled to bulkhead), RSP (1-slot), FDDI, IOC V.35, IOC RS-232
            (to modem in same bay), DTL, MTL, OSP, NME, SRP, TSI,
            Fillers.

            Fill each slot (front and rear if applicable) in priority
            order.   If a slot is already provisioned use the next
            available slot for that item.

      2)   The MSP is the Master Service Processor for the shelf. Al-
            ways provide one (1) per SC shelf in Slot 01. Provide the
            following items for each MSP required:

                  QTY (1) Service Proc. 50MHz/64MB (NTFX76CA) or
                                        50MHz/128MB (NTFX76DA)
                                              (slot 1 for 1-slot MSP)
                                              (slot 1-2 for 2-slot MSP)

            The Service Proc. 50MHz/128MByte (NTFX76DA) requires two
            card slots, all other Service Processors require only one.

The MSP for the UNIX SC shelf shall use configuration ID #1.

3) The RSP is the Real-Time Service Processor for the shelf. Provide zero, one or two double-slot RSPs per shelf in Slots 2-3 and 7-8. A combination of single-slot and double-slot RSPs can be used; however, double-slot RSPs have a higher provisioning priority. Reference RUL5.1. The maximum number of RSPs (single-slot, double-slot or a combination of single and double slot) allowed is two (2). Rules for provisioning single-slot RSPs are provided in RUL5.9.

    If a double-slot MSP is provisioned in slots 1 & 2, a RSP can NOT be provisioned in slot 2.

    Provide the following items for each double-slot RSP required:

        QTY (1) Service Proc. 50MHz/128MB (NTFX76DA)
                                (slot 2-3, 7-8 for 2-slot RSP)

        QTY (1) Service Proc. TM RSP (NTFX91RA)
                                (Slot 2R,7R for 2-slot RSP)

    The Service Proc. 50MHz/128MByte (NTFX76DA) requires two card slots, all other Service Processors require only one.

    The first RSP provisioned for the SC shelf shall use configuration ID #2. The second RSP shall use configuration ID #3.

    Also, provide one (1) SCSI Jumper Cable (NTFX8587) for the first RSP provisioned. Multiple RSPs do not require additional SCSI Jumper Cables. This is provided for Fast File System (FFS) Functionality. The possible terminations of this cable are:

    *   1R (bottom connector) to 2R (top connector) if a RSP is provisioned in slot 2.

    *   6R (bottom connector) to 7R (top connector) if the first RSP is provisioned in slot 7 and a VME SCSI Disk is provisioned.

4) If 3 SCSI units are needed, provide the following:

        QTY (1) Filler Disk Module (NTFX61ZA)
                                        (slot 22)

          QTY (3) VME SCSI Disk   2.4GB Dual (NTFX30EA)
                                     or
                                     4.0GB Dual Disk (NTFX30FA)
                                         (slots 4-6, 7-9, 10-12)

          QTY (3) VME Disk TM Kits   (NTZZ51QB)
                                     (See below for locations)

          QTY (1) SCSI-II Terminator (A0634485)
                                         (at Connector SCSI/A of
                                          Slot 12R on SC Shelf)

The VME SCSI gets its power from the NAV backplane. A VME
SCSI Disk (NTFX30EA or NTFX30FA) occupies three (3) consec-
utive slots. The VME SCSI TM (NTFX29AA) occupies two (2)
consecutive slots.

When used in this application on the SC shelf the contents
of the VME Disk TM Kit are located as follows:

*   The VME SCSI TM (NTFX29AA) occupies slots 6R-5R, 9R-8R,
    12R-11R.

The possible terminations of the SCSI Jumper   Cables
(NTFX8587) are:

*   One of the cables will connect from 12R (top connector)
    to 9R (bottom connector).

*   A second cable will connect from 9R (top connector) to
    6R (bottom connector).

*   One end of the third cable connects to 6R (top connec-
    tor).   The possible terminations of the other end of
    this SCSI Jumper Cable are:

    —   Slot 1R if a RSP is NOT provisioned in slot 2 or 3.
    —   Slot 2R if a RSP is provisioned in slot 2.
    —   Slot 3R if the first single-slot RSP (NTFX76CA)
        provisioned is in slot 3.

 5) If 2 SCSI units are needed and one of the SCSIs must be a
     NTFX61 SCSI, provide the following:

          QTY (1) SCSI Disk   2.4GB/2.4GB Dual Disk (NTFX61EA)
                               or
                               5.0GB/5.0GB Dual Disk (NTFX61FA)
                                        (slot 22)

         QTY (1) SCSI Cable   (NTFX8586)
                                     (See below for terminations)

         QTY (1) VME SCSI Disk   2.4GB Dual Disk (NTFX30EA)
                                   or
                                   4.0GB Dual Disk (NTFX30FA)
                                       (slots 4-6)

         QTY (1) VME Disk TM Kit (NTZZ51QB)
                                     (See below for locations)
         QTY (1) SCSI Terminator   (A0664610)
                                       (at Connector P4 of the
                                        PWR SCSI Backpanel
                                        on the SC shelf)

         QTY (2) SCSI Terminator   (P0667972)
                 Screws   (at Connector P4)

The VME SCSI gets its power from the NAV backplane. A VME
SCSI Disk occupies three (3) consecutive slots.   The VME
SCSI TM occupies two (2) consecutive slots.

One end of the SCSI Cable (NTFX8586) connects to Connector
P5 of the PWR SCSI Backpanel on the SC Shelf. To minimize
the length of the SCSI bus, the other end terminates on
whichever of the following devices is closest to the P5
Connector: RSP   (NTFX76CA,   NTFX76DA),   or   VME SCSI
(NTFX30EA/FA). The possible terminations of the SCSI Cable
are:

*   Slot 6R (VME SCSI TM bottom connector) if a RSP is not
     in slot 7.

*   Slot 7R (bottom connector) if the first RSP is provi-
     sioned in slot 7.

When used in this application on the SC shelf the contents
of the VME Disk TM Kit are located as follows:

*   The VME SCSI TM (NTFX29AA) occupies slots 6R-5R.

The terminations of the SCSI Jumper Cables (NTFX8587) are
dependent upon the VME SCSI and the RSP slot locations.
(Remember that a NTFX8587 may have been ordered as part of
a previous provisioning rule regarding RSPs). The possible
jumper cable terminations are:

* If no RSPs are provisioned in the shelf then: The FIRST SCSI Jumper Cable (NTFX8587) connects from 6R (top connector) to 1R (bottom connector).

* If the first and only RSP is provisioned in slot 7 of the shelf then: The FIRST SCSI Jumper Cable (NTFX8587) connects from 7R (top connector) to 6R (bottom connector). The SECOND SCSI Jumper Cable (NTFX8587) connects from 6R (top connector) to 1R (bottom connector).

* If a RSP is not provisioned in slot 7 of the shelf, then: The FIRST SCSI Jumper Cable (NTFX8587) connects from 6R (top connector) to 2R (bottom connector) when the first RSP is in slot 2. Or, the FIRST SCSI Jumper Cable (NTFX8587) connects from 6R (top connector) to 3R (bottom connector) when the first RSP is in slot 3.

6) If 2 SCSI units are needed and all of the SCSIs must be VME SCSIs, provide the following:

   QTY (1) Filler Disk Module (NTFX61ZA)
                              (Slot 22)

   QTY (2) VME SCSI Disk   2.4GB Dual Disk (NTFX30EA)
                             or
                             4.0GB Dual Disk (NTFX30FA)
                              (Slots 4-6, 7-9 or 10-12)

   QTY (2) VME Disk TM Kit (NTZZ51QB)
                              (See below for locations)

   QTY (1) SCSI-II Terminator (A0634485)
                                (at Connector SCSI/A of
                              Slot 9R or 12R on SC Shelf)

If slot positions 7-8 are occupied by a two slot RSP (NTFX76DA) provide the second VME SCSI in slots 10-12. The VME SCSI gets its power from the NAV backplane. A VME SCSI Disk (NTFX30EA or NTFX30FA) occupies three (3) consecutive slots. The VME SCSI TM (NTFX29AA) occupies two (2) consecutive slots.

When used in this application on the SC shelf the contents of the VME Disk TM Kit are located as follows:

* The VME SCSI TMs (NTFX29AA) occupy slots 6R-5R, 9R-8R or 12R-11R.

The terminations of the SCSI Jumper Cables (NTFX8587) are
dependent upon the VME SCSI slot locations. The possible
jumper cable terminations are:

*   The FIRST jumper cable may connect from 12R (top con-
     nector) to 7R (bottom connector) if the first RSP is
     provisioned in slot 7 and the second VME SCSI is provi-
     sioned in slots 10-12.

*   OR, the FIRST jumper cable may connect from 9R (top
     connector) to 6R (bottom connector) if VME SCSIs are
     provisioned in slots 7-9 and 4-6.

*   The SECOND jumper cable will connect from 7R (top con-
     nector) to 6R (bottom connector) if a RSP is provi-
     sioned in slot 7.

*   One end of the LAST jumper cable will connect to 6R
     (top connector). The possible terminations of the
     other end of this SCSI Jumper cable are:

     —   Slot 1R if the first RSP is provisioned in slot 7
          and not in slots 2 or 3.
     —   Slot 2R if the first RSP is provisioned in slot 2.
     —   Slot 3R if the first RSP provisioned is in slot 3.

7)   If 1 SCSI unit is needed, provide the following:

     QTY (1) SCSI Disk   2.4GB/2.4GB Dual Disk (NTFX61EA)
                           or
                           5.0GB/5.0GB Dual Disk (NTFX61FA)
                                   (slot 22)

     QTY (1) SCSI Cable   (NTFX8586)
                                (See below for terminations)

     QTY (1) SCSI Terminator   (A0644610)
                                   (at Connector P4 of the
                                    PWR SCSI Backpanel
                                    on the SC shelf)

     QTY (2) SCSI Terminator   (P0667972)
             Screws   (at Connector P4)

One end of the SCSI Cable (NTFX8586) connects to Connector
P5 of the PWR SCSI Backpanel on the SC Shelf. To minimize
the length of the SCSI bus, the other ends terminates on
whichever of the following devices is closest to the P5
Connector: MSP (NTFX76CA or NTFX76DA) or RSP (NTFX76CA or

NTFX76DA).   The possible terminations of the SCSI Cable
are:

*   Slot 1R if a RSP is NOT provisioned.

*   Slot 2R if a RSP is provisioned in slot 2.

*   Slot 3R if the first single-slot RSP (NTFX76CA or
     NTFX76DA) is provisioned in slot 3.

*   Slot 7R if the first RSP is provisioned in slot 7.

8)   IOC RS-232s CABLED TO BULKHEAD (EXTERNAL RS-232) - For Ex-
     ternal RS-232 interface, provide zero or one I/O Controller
     (IOC) RS232 in slots 3 or 5. Provide the following items
     when an External IOC RS232 required:

         QTY (1) I/O Controller RS232 Building Block (NTZZ42LA)

     The External RS-232 interface card in slot 3 or 5 shall al-
     ways use configuration ID #1.

     An External IOC RS232 provisioned in slot 3 or 5 has its
     eight cable ends terminated on the bulkhead plate.

9)   If single-slot RSPs are needed, Provide zero, one or two
     single-slot RSPs per shelf in Slots 2, 3, or 7. A combina-
     tion of single-slot and double-slot RSPs can be used; how-
     ever, double-slot RSPs have a higher provisioning priority.
     Reference RUL5.1. The maximum number of RSPs (single-slot,
     double-slot or a combination of single and double slot) al-
     lowed is two (2). Rules for provisioning double-slot RSPs
     are provided in RUL5.3.

     If a double-slot MSP is provisioned in slots 1 & 2, a RSP
     can NOT be provisioned in slot 2.

     Provide the following items for each single-slot RSP re-
     quired:

         QTY (1) Service Proc. 50MHz/64MB (NTFX76CA)
                                 (slot 2,3, 7 for 1-slot RSP)

         QTY (1) Service Proc. TM RSP (NTFX91RA)
                                 (Slot 2R,3R,7R for 1-slot RSP)

The first RSP provisioned for the SC shelf shall use configuration ID #2. The second RSP shall use configuration ID #3.

Also, provide one (1) SCSI Jumper Cable (NTFX8587) for the FIRST RSP provisioned. Multiple RSPs do not require additional SCSI Jumper Cables. A SCSI Jumper Cable may have already been provided if a double- slot RSP (NTFX76DA) was previously provided. This cable is provided for Fast File System (FFS) Functionality. The possible terminations of this cable are:

*   1R (bottom connector) to 2R (top connector) if a RSP is provisioned in slot 2.

*   1R (bottom connector) to 3R (top connector) if the first single-slot RSP (NTFX76CA) is provisioned in slot 3.

*   1R (bottom connector) to 7R (top connector) if the first RSP is provisioned in slot 7 and a VME SCSI Disk is NOT provisioned.

*   6R (bottom connector) to 7R (top connector) if the first RSP is provisioned in slot 7 and a VME SCSI Disk is provisioned.

10) The FDDI supports fiber digital distribution interface. If needed, provide a maximum of one (1) per shelf in Slot 3, 4, 7 or 13. Provide the following items for each FDDI required:

QTY (1) FDDI Kit (NTZZ51PA)
QTY (2) FDDI Adapter Plate (P0806647)
QTY (4) FDDI Screws #4 (P0670923)

The FDDI shall use configuration ID #1.

If an IOC RS-232 is required to go to the bulkhead, it must be provisioned in slot 3, and if a FDDI is to be provisioned, it must be mounted in slot 4, 7 or 13.

11) The IOC V.35 supports two (2) external V.35 ports. If needed, provide a maximum of eight (8) per shelf in Slots 3,4,5,7,9,11,13 and 15. When the IOC V.35 is assigned to slots 5,7,9,11,13 or 15 the next even-numbered slot is unavailable for DTL provisioning. Provide the following items for each IOC V.35 required:

QTY (1) I/O Controller V.35 Building Block (NTZZ42KD
        or NTZZ42KC)

The configuration ID #'s for IOC V.35 cards located in the
SC shelf should be set as follows:

*   the card with the lowest slot number shall use ID #1

*   the next card in ascending order of slot number shall
     use ID #2

*   the next card shall use ID #3 and so on until all IOC
     V.35 cards have been configured.

If an IOC RS-232 has been previously provisioned in slot 3
then an IOC V.35 cannot be provisioned in slot 3. If an IOC
RS-232 has been previously provisioned in slot 5 then an
IOC V.35 cannot be provisioned in slot 5.

If a FDDI card is provisioned in slot 3 or 7, then no IOC
V.35 can be provisioned in slot 3. If a FDDI card is provi-
sioned in slot 4 or 13, then no IOC V.35 can be provisioned
in slot 4.

The NTZZ42KB is replaced with the NTZZ42KD for NAV Base 003
applications. The NTZZ42KD building block will be replaced
by the NTZZ42KC building block at a future date. The
NTFX82CA (provided in the NTZZ42KC building block) is used
only in NAV controller shelves running the SRV4 UNIX oper-
ating system. The NTFX82CA detects when the cable connected
to it is damaged or unplugged. The NTFX82CA is the prefered
I/O Controller TM for UNIX base Controller shelves and will
replace the NTFX82BA (provided in the NTZZ42KD building
block). The NTFX82BA will be manufactured discontinued in
1997.

12) IOC RS-232 CABLED TO MODEM (INTERNAL RS-232) - The I/O Con-
    troller (IOC) RS232 supports eight (8) RS232 interfaces at
    up to 19.2 Kbit/s. If needed, provide a maximum of six (6)
    IOC RS-232 per shelf in Slots 4, 17-13. Provide the fol-
    lowing items for each IOC RS232 required:

        QTY (1) I/O Controller RS232 Building Block (NTZZ42LA)

    The configuration IDs for these cards shall be set as fol-
    lows:

    *   The card with the lowest provisioning order (slot 4)
         shall use ID #1 (unless an External IOC RS-232 was pro-

visioned in slots 3 or 5, then the IOC RS-232 card
shall use ID #2.)

* the next card in ascending order (slot 17) shall use ID
  #2 (or #3)

* the next card in ascending order (slot 16) shall use ID
  #3 (or #4) and so on until all provisioned IOC RS-232
  cards have been configured.

IOC RS232s in slots 4, 17-13 have their eight cable ends
terminated on modems in the same bay. One modem shelf sup-
ports up to two IOC RS-232s in a cabinet.

Provide eight (8) 9-25 Pin Adapter Cables (NTFX8550) for
EACH IOC RS232 mounted in Slots 4, 17-13. (One is con-
nected to each of the 9-pin ends of the OA&M Telemetry Ca-
ble (NTFX8514). Each of these 8 cable ends will then be
connected to one 25-pin connector on the modem shelf back-
panel, 4 on the left side and 4 on the right side.)

13) The Standard DTL supports one (1) T1 to voice-bus inter-
    face. If needed, provide a maximum of twelve (12) per
    shelf in Slots 5-16. Provide the following items for each
    Standard DTL required:

    QTY (1) Standard DTL Kit (NTZZ51HA)

    If an IOC V.35 card was provisioned in slots 5, 7, 9, 11,
    13, or 15 then a DTL can not be provisioned in slots 6, 8,
    10, 12, 14, or 16 respectively.

14) Reserved for future use. This item originally contained in-
    formation pertaining to the NAV BRI circuit pack. The BRI
    was manufactured discontinued per EC 018-51232.

15) The MTL (NTFX64BA) supports connectivity to thirty-two (32)
    voice bus channels. If needed, provide a maximum of six-
    teen (16) per shelf in Slots 20-5.

16) The OSP (NTFX88AA) supports open signal processing. If
    needed, provide zero or one per shelf. The OSP can be pro-
    visioned in Slots 19-5.

17) The NME (NTFX92AA) supports network media. If needed, pro-
    vide a maximum of fifteen (15) per shelf in Slots 19-5.

18) The SRP (NTFX78AA) supports speech recognition processing.
    If needed, provide a maximum of sixteen (16) per shelf in
    Slots 3-20.

    The configuration ID #'s for SRP cards located in the SC
    shelf should be set as follows:

    *   the card with the lowest slot number shall use ID #1

    *   the next card in ascending order of slot number shall
         use ID #2

    *   the next card shall use ID #3 and so on until all SRP
         cards have been configured.

19) Provide one (1) Time Slot Interchange (TSI) (NTFX65AA) in
    Slot 21 of the Service Controller Shelf when any of the
    following is selected for the configuration: DTL, MTL, OSP,
    NME.

20) Provide one (1) Filler CP (NTFX66AA) for every Slot 02-21
    of the UNIX Service Controller Shelf not filled by cards,
    and provide one (1) Filler TM (NTFX67AA) for every Slot
    02R-17R of the Service Controller Shelf not filled by tran-
    sition modules.

21) Reserved for future use.   This item originally contained
    information pertaining to the cover plates and mounting
    screws used to fill empty bulkhead positions. Manufacturing
    now provides this material for all empty bulkhead positions
    on NAV bays.

RUL6 1) The AIX-Based Service Controller Shelf, NTZZ51EC, (software
          name = General Controller (GC)) has (21) slots in front for
          cards and (17) slots in rear for transition modules. These
          cards and transition modules shall be assigned in the fol-
          lowing priority order: MSP, SCSI, VME SCSI, FDDI, Filler.

      2) The MSP is the Master Service Processor for the shelf. Al-
          ways provide one (1) per shelf in Slot 01. Provide the fol-
          lowing items for each MSP required:

          QTY (1) Service Proc. 100MHz/64MB (NTFX77UA) or
                               100MHz/128MB (NTFX77VA) or

                                 (slot 1-2)

          QTY (1) Service Proc. (NTFX91BA) TM MSP (Slot 01R)

The Service Proc. (NTFX77UA) 100MHz/64MB and the Service
Proc. (NTFX77VA) 100MHz/128MB require two card slots.

The MSP for the AIX SC shelf shall use configuration ID #1.

3) If 3 SCSI units are needed, provide the following:

Qty (1) Filler Disk Module (NTFX61ZA)
                          (Slot 22)

Qty (3) VME SCSI Disk   2.4GB Dual Disk (NTFX30EA)
                           or
                           4.0GB Dual Disk (NTFX30FA)
                             (Slots 4-6, 7-9, 10-12)

QTY (3) VME Disk TM Kits   (NTZZ51QB)
                          (See below for locations)

QTY (1) SCSI-II Terminator (A0634485)
                              (at Connector SCSI/A of
                               Slot 12R on SC Shelf)

The VME SCSI gets its power from the NAV backplane. A VME
SCSI Disk (NTFX30EA or NTFX30FA) occupies three (3) consec-
utive slots. The VME SCSI TM (NTFX29AA) occupies two (2)
consecutive slots.

When used in this application on the SC shelf the contents
of the VME Disk TM Kit are located as follows:

*   The VME SCSI TM (NTFX29AA) occupies slots 6R-5R, 9R-8R,
    12R-11R.

The possible terminations of the SCSI Jumper Cables
(NTFX8587) are:

*   One of the cables will connect from 12R (top connector)
    to 9R (bottom connector).

*   A second cable will connect from 9R (top connector) to
    6R (bottom connector).

*   The third cable will connect from slot 6R (top connec-
    tor) to slot 1R (bottom connector)

4) If 2 SCSI units are needed and one of the SCSIs must be a
    NTFX61 SCSI, provide the following:

              QTY (1) SCSI Disk   2.4GB/2.4GB Dual Disk (NTFX61EA)
                                     or
                                     5.0GB/5.0GB Dual Disk (NTFX61FA)
                                          (slot 22)

              QTY (1) SCSI Cable   (NTFX8586)
                                        (See below for terminations)

              QTY (1) VME SCSI Disk   2.4GB Dual Disk (NTFX30EA)
                                        or
                                        4.0GB Dual Disk (NTFX30FA)
                                          (slots 4-6)

              QTY (1) VME Disk TM Kit (NTZZ51QB)
                                          (See below for locations)

              QTY (1) SCSI Terminator   (A0664610)
                                          (at Connector P4 of the
                                           PWR SCSI Backpanel
                                           on the SC shelf)

              QTY (2) SCSI Terminator   (P0667972)
                      Screws   (at Connector P4)

      The VME SCSI gets its power from the NAV backplane. A VME
      SCSI Disk occupies three (3) consecutive slots. The VME
      SCSI TM occupies two (2) consecutive slots.

      When used in this application on the SC shelf the contents
      of the VME Disk TM Kit are located as follows:

      *   The VME SCSI TM (NTFX29AA) occupies slots 6R-5R.

      *   The SCSI Jumper Cable (NTFX8587) connects to the VME
          SCSI TM (slot 6R) top connector. The other end termi-
          nates on slot 1R (bottom connector).

   One end of the SCSI Cable (NTFX8586) connects to Connector P5 of
   the PWR SCSI Backpanel on the SC Shelf. The other end terminates
   on the VME SCSI TM (Slot 6R) bottom connector.

     5) If 2 SCSI units are needed and all of the SCSIs must be VME
         SCSIs, provide the following:

              QTY (1) Filler Disk Module (NTFX61ZA)
                                          (Slot 22)

              QTY (2) VME SCSI Disk   2.4GB Dual Disk (NTFX30EA)

                                             or
                                 4.0GB Dual Disk (NTFX30FA)
                                    (slots 4-6, 7-9 or 10-12)

          QTY (2) VME Disk TM Kit (NTZZ51QB)
                                        (See below for locations)

          QTY (1) SCSI-II Terminator (A0634485)
                                        (at Connector SCSI/A of
                                         Slot 12R on SC Shelf)

The VME SCSI gets its power from the NAV backplane. A VME
SCSI Disk occupies three (3) consecutive slots.   The VME
SCSI TM occupies two (2) consecutive slots.

When used in this application on the SC shelf the contents
of the VME Disk TM Kit are located as follows:

*   The VME SCSI TMs (NTFX29AA) occupy slots 6R-5R, 9R-8R
    or 12R-11R.

The   possible terminations of the SCSI Jumper Cables
(NTFX8587) are:

*   The first jumper cable will connect from 9R (top con-
    nector) to 6R (bottom connector) if the VME SCSIs are
    located in slots 4-6 and 7-9 . If the VME SCSIs are lo-
    cated in slots 4-6 and 10-12, then the first jumper ca-
    ble will connect from 12R (top connector) to 6R (bottom
    connector)

*   The second cable will connect from 6R (top connector)
    to slot 1R (bottom connector).

6) If 1 SCSI unit is needed provide the following:

         Qty (1) SCSI   2.4GB/2.4GB Dual Disk (NTFX61EA)
                               or
                               5.0GB/5.0GB Dual Disk (NTFX61FA)
                                     (slot 22)

         Qty (1) SCSI Cable   (NTFX8586)

QTY (1) SCSI Terminator   (A0644610)
                                  (at Connector P4 of the
                                   PWR SCSI Backpanel on
                                   the SC shelf)

QTY (2) SCSI Terminator   (P0667972) at Connector P4
        Screws   (at Connector P4)

One end of the SCSI Cable (NTFX8586) connects to Connector
P5 of the PWR SCSI Backpanel on the SC Shelf. The other end
terminates on slot 1R (bottom connector).

7) The FDDI supports fiber digital distribution interface. If
    needed, provide a maximum of one (1) per shelf in Slot 3.
    Provide the following items for each FDDI required:

    QTY (1) FDDI Kit (NTZZ51PA)
    QTY (2) FDDI Adapter Plate (P0806647)
    QTY (4) FDDI Screws #4 (P0670923)

    The FDDI shall use configuration ID #1.

8) Reserved for future use. This item originally contained
    information pertaining to the SS7 circuit pack, TM and ca-
    bles. These items are now ordered for the NTFX55CA NAV SS7
    Server Bay.

9) Provide one (1) Filler CP (NTFX66AA) for every Slot 02-21
    of the AIX Service Controller Shelf not filled by cards,
    and provide one (1) Filler TM (NTFX67AA) for every Slot
    02R-17R of the Service Controller Shelf not filled by tran-
    sition modules.

RUL7 1) The NAVB002 Service Controller Shelf has (21) slots in
          front for cards and (17) slots in rear for transition mod-
          ules. These cards and transition modules shall be assigned
          in the following priority order: MSP, RSP, SCSI, IOC V.35,
          IOC RS232, DTL, MTL, SRP, TSI, Filler.

          Fill each slot (front and rear if applicable) in priority
          order.   If a slot is already provisioned use the next
          available slot for that item.

      2) The MSP is the Master Service Processor for the shelf. Al-
          ways provide one (1) per shelf in Slot 01.   Provide   the
          following items for each MSP required:

          QTY (1) Service Proc. 33MHz/32-64MB (NTFX75BA or NTFX75CA)

3) The RSP is the Real-Time Service Processor for the shelf.
   If needed, provide a maximum of one (1) per shelf in Slot
   02. Provide the following items for each RSP required:

   QTY (1) Service Proc. 33MHz/32-64MB (NTFX75BA or NTFX75CA)
   QTY (1) Service Proc. TM RSP (Slot 02R)
   QTY (1) SCSI Jumper Cable   (Slot 02R)

   The terminations of the SCSI Jumper Cable are 1R (bottom
   connector) to 2R (top connector).

   This is provided for Fast File System Functionality.

4) The I/O Controller (IOC) V.35 supports two (2) external
   V.35 ports.   If needed, provide a maximum of six (6) per
   shelf in Slots 5, 7, 9, 11, 13, 15. When the IOC Control-
   ler V.35 is assigned to these slots, the associated even-
   numbered slot (n+1) is unavailable for DTL provisioning.
   Provide the following items for each IOC V.35 required:

   QTY (1) I/O Controller V.35 Building Block

5) The I/O Controller (IOC) RS232 supports eight (8) RS232
   interfaces at up to 19.2Kbaud. Provide a maximum of seven
   (7) per shelf in Slots 3, 4, 17-13. Provide the following
   items for each IOC RS232 required:

   QTY (1) I/O Controller RS232 Building Block

   Also, provide eight (8) 9-25 Pin Adapter Cables for each
   IOC RS232 mounted in Slots 3, 17-13. (One is connected to
   each of the 9- pin ends of the OA&M Telemetry Cable.   Each
   of these 8 cable ends will then be connected to one 25-pin
   connector on the modem shelf backpanel - 4 on the left side
   and 4 on the right side.)

   If an IOC RS232 is provisioned in slot 4, all eight ends of
   the OA&M Telemetry Cable terminate on the bulkhead connec-
   tor plate.

6) Always provide at least one (1) Standard, Redundant, or
   Backup DTL, depending on the SCs usage. It is required to
   get T1 onto the Voice Bus (i.e. a Voice Controller applica-
   tion).

   The Standard DTL supports one (1) T1 to voice-bus inter-
   face. A maximum of twelve (12) per shelf may be provi-

sioned in Slots 5-16. Provide the following items when a
Standard DTL is required:

QTY (1) Standard DTL Kit Building Block (NTZZ51HA)

The Redundant DTL Kit is provisioned for Service Controller
shelves used as redundant controllers. The Redundant DTL
Kit supports one (1) T1 to voice-bus interface. Provide a
maximum of twelve (12) per shelf in Slots 5-16.

Provide the following items when a Redundant DTL is re-
quired:

QTY (1) Redundant DTL Kit Building Block (NTZZ51KA)

The Backup DTL Kit supports one (1) T1 to voice-bus inter-
face.   If needed, provide a maximum of twelve (12) per
shelf in Slots 5-16. The Backup DTL Kit is provisioned for
Service Controller shelves used as backup controllers.
Provide the following items when a Backup DTL is required:

QTY (1) Backup DTL Kit Building Block (NTZZ51LA)

7)   The Multi-Channel Tel Link (MTL) supports connectivity to
     thirty-two (32) voice bus channels. If needed, provide a
     maximum of sixteen (16) per shelf in Slots 20-5.

8)   The Speech Recognition Processor (SRP) supports speech re-
     cognition processing.   If needed, provide a maximum of
     eighteen (18) per shelf in Slots 3-20.

9)   Provide one (1) Filler CP for every Slot 02-20 of the Ser-
     vice Controller Shelf not filled by cards, and provide one
     (1) Filler TM for every Slot 02R-17R of the Service Con-
     troller Shelf not filled by transition modules.

10) Always provide one (1) SCSI Device in Slot 22 of the Ser-
     vice Controller Shelf. Select one of the following: 2.4GB
     Disk/DAT or 2.4GB/2.4GB Dual Disk.

11) Always provide one (1) SCSI Cable since a SCSI Disk is al-
     ways required for the SC shelf. One end connects to Con-
     nector P5 of the PWR SCSI Backpanel on the SC Shelf.   To
     minimize the length of the SCSI bus, the other ends termi-
     nates on whichever of the following devices is closest to
     the P5 Connector: MSP or RSP. The possible terminations of
     the other end of the SCSI Cable are

     * Slot 1R (bottom connector) on the TM MSP if an RSP is NOT provisioned.

     * Slot 2R (bottom connector) on the TM RSP if an RSP is provisioned.

12) Provide (8) 9 Pin Filler Plate and (16) Mounting Screws on the SC bulkhead connector plate per SC shelf if position 4R is not equipped.

13) Provide (1) 25 Pin Cover Plate and (2) Mounting Screws on the SC bulkhead connector plate for each uneqipped SC shelf CP position 3R- 17R.

RUL8 1) Provide two (2) Modem Shelf Air Plenum (NTFX5511) for each modem shelf. One above and one below. Provide two (2) Shelf Mounting Hardware Kits (NTFX5501) per Modem Shelf to mount the air plenums.

2) Provide one (1) Modem Shelf Power Kit (NTFX5522) for the FIRST modem shelf in the NAV Controller Bay. Provide two (2) Modem Power Jumper Cables (NTFX8526) for each ADDI-TIONAL modem shelf in the NAV Controller Bay. The modem shelf comes equipped with two power converters.

3) Each OC can support as many remote dial-up X.11 terminals and dedicated X.11 terminals as required.

Provide the following items when a Modem Connected X.11 Terminal is required to be connected to a modem in a Controller Bay:

    QTY (1) Modem Connected X.11 Terminal Kit (NTFY10AE)

Each Modem Connected X.11 Terminal Kit requires one (1) Universal Modem 4-Wire (A0609601), configured as an RS-232, to be located in Slots 1 or 9 of the FIRST Modem Shelf, if the modem shelf is located in the same Controller Bay as the OC shelf.

If the modem shelf is located in a Controller Bay other than the one containing the OC shelf, provide one (1) Universal Modem 4- Wire (A0609601), configured as a RS-232, to be located in Slots 1 or 9 of the FIRST Modem Shelf and one (1) Modem to Bulkhead Cable (NTFX8563) for each Modem Connected X.11 Terminal Kit.

If the modem shelf is to be located in a LAN Bay, refer to the LAN Bay provisioning documents.

Some applications may require a Universal Modem 4-Wire modem (A0609601) to be provisioned with them. If a modem has been provisioned with the application, and the customer is not providing their own access terminal or printer to use with it, the first Modem Connected X.11 Terminal Kit (NTFY10AE) may use the previously provisioned modem unless a Printer Kit (NTFY10AF) has already been provisioned to use it.

4) Provide a maximum of four (4) Printer Kits for each NAV Node. Provide the following items when a Printer is required to be connected to a modem in a Controller Bay:

   QTY (1) Desktop Matrix Printer Kit (NTFY10AF)

Each Printer Kit requires one (1) Universal Modem 4-Wire (A0609601), configured as RS-232, to be located in Slots 2, 3, 10, or 11 of the FIRST modem shelf, if the modem shelf is located in the same bay as the OC shelf.

If the modem shelf is not located in the same bay as the OC shelf, provide one (1) Universal Modem 4-Wire (A0609601), configured as a RS-232, to be located in Slots 2, 3, 10, or 11 of the FIRST modem shelf and one (1) Modem to Bulkhead Cable (NTFX8563).

Some applications may require a Universal Modem 4- Wire modem (A0609601) to be provisioned with them. If a modem has been provisioned with the application, and the customer is not providing their own access terminal or printer to use with it, the Printer Kit (NTFY10AF) may use the previously provisioned modem unless a Modem Connected X.11 Terminal Kit (NTFY10AE) has already been provisioned to use it.

5) Provide a maximum of two (2) Remote Dialup X.11 Terminal Kits for each NAV Node. Provide the following items when a Remote Dialup X.11 Terminal is required to be connected to a modem in a Controller Bay:

   QTY (1) Remote Dialup X.11 Terminal Kit (NTFY10AD)

Each Remote Dialup X.11 Terminal Kit (NTFY10AD) requires one (1) Modem 9600 Dial-Up (A0600472) to be located in Slots 4 or 12 of the FIRST modem shelf, if the modem shelf is located in the same bay as the OC shelf.

If the modem shelf is not located in the same bay as the OC shelf, provide one (1) Modem 9600 Dial-Up (A0600472) to be

located in Slots 4 or 12 of the FIRST modem shelf and one
(1) Modem to Bulkhead Cable (NTFX8563) for each Remote
Dialup X.11 Terminal Kit.

Some   applications   may require a 9600 Dial-Up modem
(A0600472) to be provisioned with them.   If a modem has
been provisioned with the application, and the customer is
not providing their own access terminal to use with it, the
first Remote Dialup X.11 Terminal Kit (NTFY10AD) may use
the previously provisioned modem.

6)   Reserved for future use.   This item originally contained
     information pertaining to a Local X.11 Terminal (NTFY10AA).
     This Terminal connects directly to an Ethernet HUB and is
     there for provisioned with the LAN Bay, not the Controller
     Bay.

7)   V.35 MODEM - The use of Universal 64k modem   replaces Uni-
     versal modem items. The new modems provide higher bandwidth
     (64 kbaud) compared to the existing universal modems (56
     kbaud). The 64k modems (NTFY01AA) will be generally avail-
     able for all applications once the existing 56k modem
     (A0609601) stock is exhausted.

     The Universal Modem 4-Wire (A0609601) may be provisioned by
     itself or as part of the Universal Modem Building Block Kit
     (NTZZ51NA), as explained below. The Universal 64k modem
     (NTFY01AA) is provisioned by itself and not as part of a
     Building Block.

     Universal Modems provisioned in slots 1-4 or 9-12 of the
     first modem shelf (shelf position 40) that is provisioned
     in the same bay as an OC shelf do not require any addi-
     tional cabling.   (This is because these positions are
     equipped with NTFX8550 cables going to the OC shelf.) Pro-
     vision the Universal Modem 4-Wire (A0609601) by itself.

     For Universal Modems provisioned in slots 5-8 or 13-16 of
     the first modem shelf (shelf position 40) provisioned in
     the same bay as an OC shelf, additional cabling to the
     bulkhead is required.   Provision the Universal Modem Kit
     Building Block (NTZZ51NA) if the Universal Modem 4-Wire
     (A0609601) is used.

     If the Universal 64k modems (NTFY01AA) is required, pro-
     vision (1) Modem to Bulkhead Cable (NTFX8563) with each
     modem.

For Universal Modems provisioned in any slot on any shelf besides the first modem shelf (shelf position 40) provisioned in the same bay as an OC shelf, additional cabling to the bulkhead is required. Provision the Universal Modem Kit Building Block (NTZZ51NA) if the Universal Modem 4-Wire (A0609601) is used.

If the Universal 64k modem (NTFY01AA) is required, provision (1) Modem to Bulkhead Cable (NTFX8563) with each Universal 64k modem provided.

8) RS232 MODEM - When a RS232 modem is required for interbay configurations, provide one (1) Universal Modem 4-Wire (A0609601). Configure the modem for RS-232. This is the type modem required for Modem Connected X.11 Terminal and Printer connectivity. The Universal Modem 4-Wire may be provisioned by itself or as part of the Universal Modem Kit Building Block (NTZZ51NA), as explained below.

Universal Modems 4-Wire (A0609601) provisioned in slots 1-4 or 9-12 of the first modem shelf (shelf position 40) that is provisioned in the same bay as an OC shelf do not require any additional cabling. (This is because these positions are equipped with NTFX8550 cables going to the OC shelf.) Provision the Universal Modem 4-Wire (A0609601) by itself.

For Universal Modems 4-Wire provisioned in slots 5-8 or 13-16 of the first modem shelf (shelf position 40) that is provisioned in the same bay as an OC shelf, provision the Universal Modem Kit Building Block (NTZZ51NA).

For Universal Modems 4-Wire provisioned in any slot on any shelf besides the first modem shelf (shelf position 40) that is provisioned in the same bay as an OC shelf, additional cabling is required. Provision the Universal Modem Kit Building Block (NTZZ51NA).

9) DIAL-UP MODEM - If a modem is required for dialup modem access, provide one (1) Modem 9600 Dial-Up (A0600472) to be located in Slot 4 or 12 of the FIRST Modem Shelf in the NAV node, if the modem shelf is located in the same bay as the OC shelf. A maximum of two (2) may be provisioned. The first modem goes in slot 4, the second in slot 12.

If the modem shelf is not located in the same bay as the OC shelf, provide one (1) Modem 9600 Dial-Up (A0600472), and one (1) Modem to Bulkhead Cable (NTFX8563) to be located in

Slot 4 or 12 of the FIRST Modem Shelf in the NAV node. A
maximum of two (2) modems may be provisioned. The first
modem goes in slot 4, the second in slot 12.

If a second modem is required, it also requires one (1)
Modem to Bulkhead Cable (NTFX8563).

The customer may provide their own peripheral dialup access
terminal equipment to connect to this modem. If they wish
Nortel to supply a dialup access terminal, then provision
a Remote Dialup X.11 Terminal Kit (NTFY10AD) per its rule.

10) Provide one (1) Modem Filler Card (A0650426) for each posi-
    tion not provisioned with a modem. Each modem shelf has 16
    modem positions.

11) Reserved for future use. This item originally contained
    information pertaining to the cover plates and mounting
    screws used to fill empty bulkhead positions. Manufacturing
    now provides this material for all empty bulkhead positions
    on NAV bays.

12) One modem shelf supports up to two IOC (RS-232) kits in a
    cabinet.

13) A roll-up terminal is required at each NAV site. A roll-up
    terminal is an ASCII (text-based) terminal on wheels prima-
    rily used for installation. It should be capable of at
    least recognizing the VT-100 page fomatting protocol. Fur-
    thermore, it can only be connected to NAV shelves or NAV
    hubs using ground isolated RS-232 cables, such as with the
    RS-232 ISO cable assembly (NT3M20BE). If the terminal and
    ground isolated cable are already available at the site,
    there is no need to order a new one.

    If a new roll-up terminal is required, provision (1) VT520
    White Display Terminal (A0376839) and (1) NT1320 (NT3M20BE)
    Isolation Kit (A0388012).

RUL9 1) Provide one (1) NAV Shelf Air Plenum (NTFX5605) for each
        shelf location, 37, 15 and 02, not provisioned with a NAV
        Shelf.
