

Veeam Backup *for* AWS

AWS-native backup and recovery

Challenge

AWS provides an industry-leading cloud platform for you to create and deploy applications and services. However, as referenced in the AWS Shared Responsibility Model, you still retain complete responsibility for your data, including its security and protection.

Veeam® Backup *for* AWS delivers native, policy-based protection for reliable recovery from accidental deletion, ransomware and other data loss scenarios. An API-first approach, immutable backups and full- and file-level restore ensure resilient protection that's easy and cost-optimized, freeing up time and resources for strategic IT priorities.

Powerful set-it-and-forget-it backup

Secure access and management of data to overcome ransomware

Powerful recovery options that keep businesses productive

Zero-fuss backup that meets SLAs

Key capabilities

Relentless Security

- **Immutable and encrypted**
Data integrity through WORM state and encryption
- **Isolated backups**
Logical separation of backup data from production accounts
- **Secure access**
Least-privilege IAM and role-based access controls (RBAC)

Zero Compromise

- **Policy-based**
Automated detection and protection with native backup
- **Cost optimized**
Backup lifecycling to object storage with cost calculations
- **Hybrid ready**
Operationally consistent management across the hybrid and multi cloud*

Fast, reliable recovery

- **Recover anywhere**
Cross-account, region and platform* restores
- **Full- and file-level**
Full instance or granular recovery, in-place or as new
- **Simplified recovery**
Wizard-driven, automated and self-service workflows

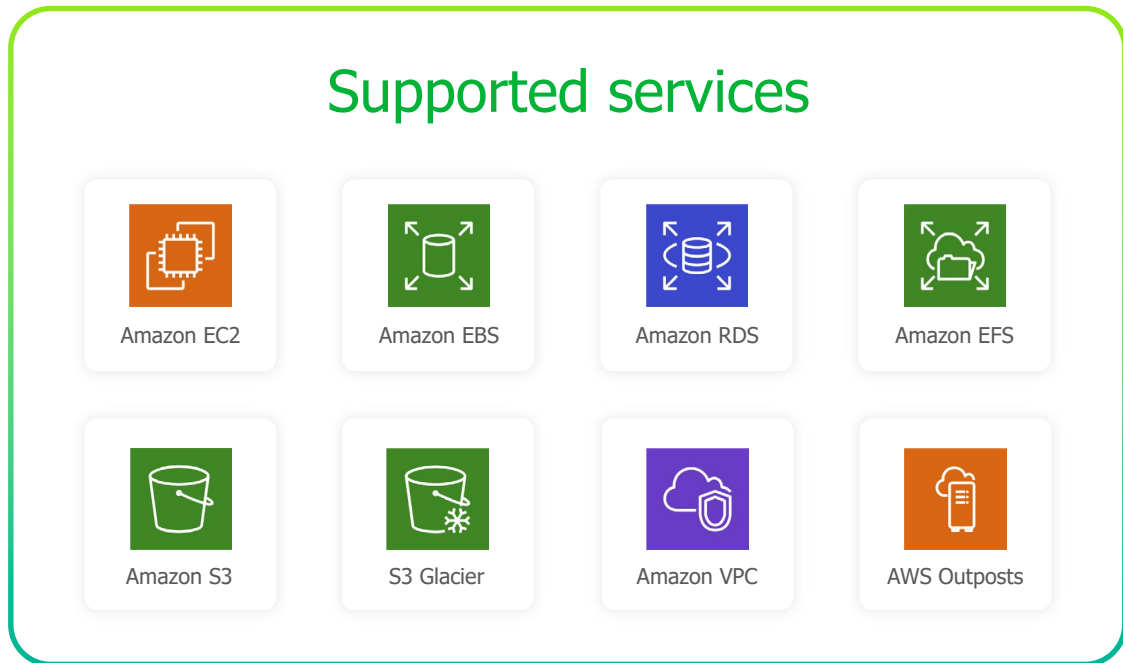

Latest Release

- **Immutable backups**
Data integrity through WORM states using Amazon S3 Object Lock
- **Enterprise scalability**
Performance and efficiency enhancements for large-scale AWS environments
- **Community Edition**

"Veeam Backup for AWS is a natural evolution from Veeam's great on-premises backup solutions which have all the best-in-breed features, the evolution to AWS did not compromise the features and in fact made things so much easier to deploy and get started immediately. It has a more mature feature set than the regular AWS Backup."

— **Sawan Joshi**, Director of Information Security, Firstport LTD
