INTRODUCTION

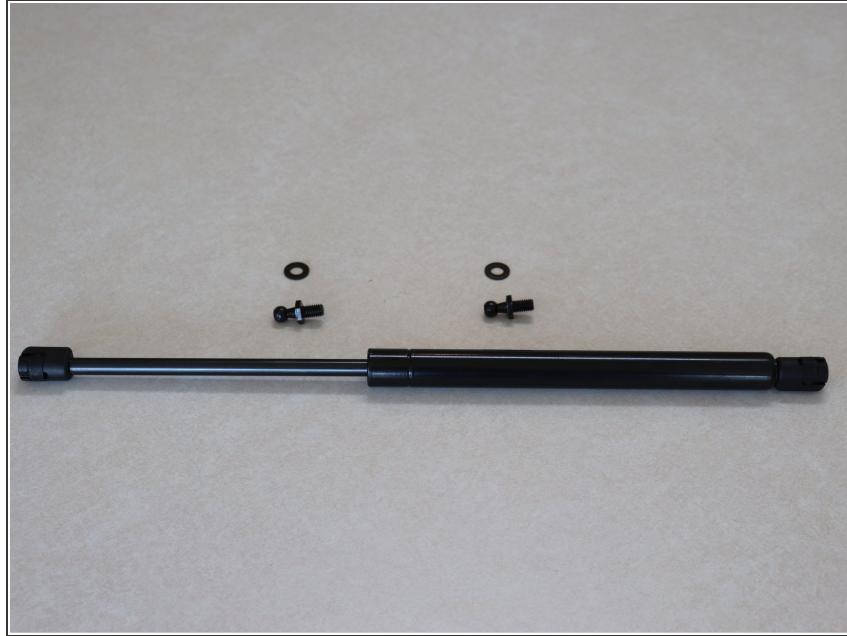

This guide shows the process of replacing a hatch strut on a 2002-2006 Acura Integra (DC5 or RSX). A hatch strut, also referred to as a hatch lift support, is a vital component to keeping the hatch of a vehicle open. As they age and become worn out they'll no longer function properly. In cold temperatures a worn hatch strut may even fail to keep the hatch open.

All that is needed are a replacement hatch strut, a 12mm wrench, and a crescent wrench. There is a wide variety of aftermarket hatch struts for this vehicle and there is no electrical work required for this fast fix. This guide utilizes a [Monroe Max-Lift Lift Support. \(Part Number: 900077\)](#) but any compatible replacement will suffice. It is recommended to have a helper stand by to hold the weight of the hatch or to safely prop it open during the replacement process. A simple fix like this can save you the time and money of going to a repair shop and helps build basic auto maintenance skills.

TOOLS:

- [12mm Wrench \(1\)](#)
- [Adjustable Wrench \(1\)](#)

Step 1 — Hatch Strut

- Acquire a compatible hatch strut (lift support). This guide uses a [Monroe Max-Lift Lift Support. \(Part Number: 900077\)](#)

Step 2

- Go to the rear of the vehicle.
- Pull up on the trunk handle to lift open the trunk.

Step 3

- ① Prop open hatch or have someone help support the hatch weight.
- Remove the upper ball mount.
- Turn the upper ball mount counterclockwise with a 12mm wrench.

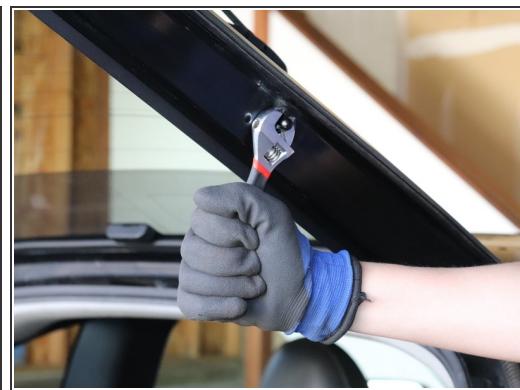

② It will pop off when it's completely unscrewed.

Step 4

- Remove the lower ball mount.
- Turn the lower ball mount counterclockwise with a 12mm wrench.
- *(i)* It will pop off when it's completely unscrewed.

Step 5

- Place a washer on the new upper ball mount.
- Turn it clockwise to hand tighten the new upper ball mount.
- Turn it clockwise with the crescent wrench to finish tightening.

Step 6

- Place a washer on the new lower ball mount.
- Turn it clockwise to hand tighten the new lower ball mount.
- Turn it clockwise with a crescent wrench to finish tightening the new lower ball mount.

Step 7

- Place a lower hatch strut socket over the new lower ball mount.
- Push it firmly onto the new lower ball mount. It will pop on easily.

Step 8

- Place the upper hatch strut socket over the new upper ball mount.
- Press it firmly onto the new upper ball mount. It will pop on easily.

To reassemble your device, follow these instructions in reverse order.
