

2008-2012 Honda Accord Turn Signal Replacement

How to replace the turn signal in your Honda Accord.

Written By: ndsol

INTRODUCTION

How to replace the turn signal in your Honda Accord.

TOOLS:

- [2 Hands](#) (1)
- [Latex or nitrile gloves](#) (1)

PARTS:

- [Sylvania 7528 Long Life Mini Bulb](#) (1)

Step 1 — Introduction

- ifixit doesn't allow linking to specific times in the video, so you'll have to drag through to the right time in the video:
- LEFT Turn Signal (Driver's side): 8:09 in video.
- RIGHT Turn Signal (Passenger's side): 9:39 in video.
- The beginning and end of the video includes a lot of talking. Really, just drag through to the specific time you need.

Step 2 — Headlight replacement

- This video does not go over headlight replacement. Other videos I have looked at suggested taking off the underside body panel for the front wheels.
- It may be possible to reach the headlight using the same method as the turn signals. Please update this guide if it works for you.
