Step 1 — Back Casing
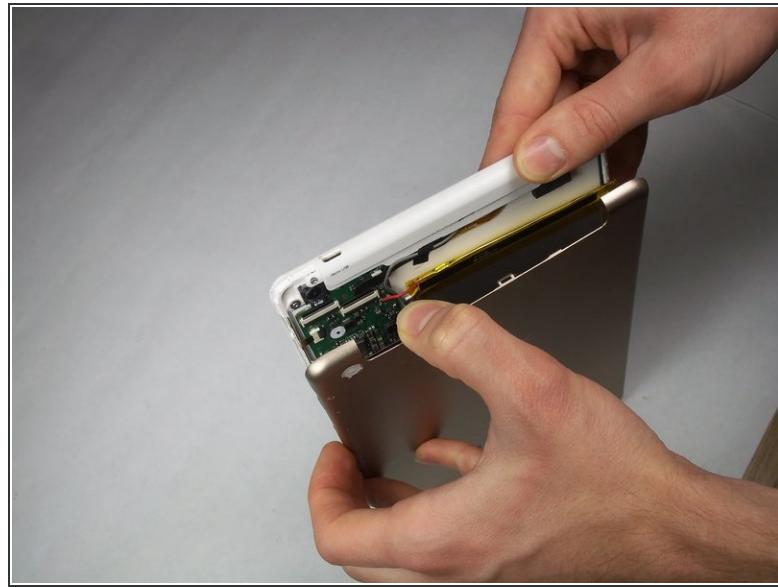

- Start by bending the tablet back at the top white-colored portion to expose an opening between the back cover and the tablet body.

- Wedge a plastic opening tool into the opening and push it down to force the back cover off.

- Move along the top edge of the tablet and repeat the step above.

- Pull the back cover away from the tablet body to completely remove it.

Step 2 — Front Camera

- To get to the front camera, you will first need to remove the top panel.

- Unscrew two 2.25 mm Phillips screws with a #00 screwdriver from the top plastic panel to remove it.

Step 3

- Once unscrewed, use a spudger to pop the panel off by wedging it underneath the panel.

Step 4
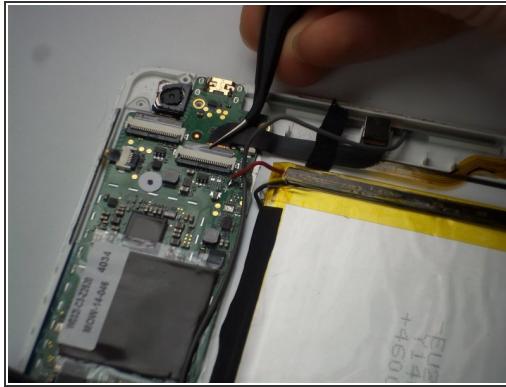

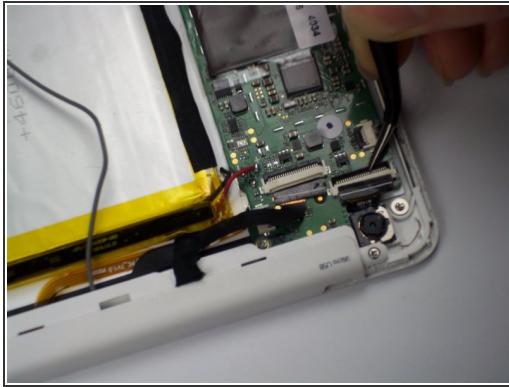

- First, use plastic coated tweezers to pull up the black release tab.

- Pull on the black connector with tweezers as close as possible to the white connector base, making sure not to pull on the connector base.

⚠ It is important to be careful not to damage the black connector tape or the white base.

- Next, use the tweezers to peel off the tape holding down the connector to the front camera.

- The front camera can now be removed from its socket.

To reassemble your device, follow these instructions in reverse order.
