-

## Step 1 — Volume/Power Buttons

- Use sim card attachment for the screwdriver found in the iFixit box to remove the sim card tray from the phone.

## Step 2

- Remove the 3.5 mm screws on both sides of the charging port, on the bottom of the phone, using the T2 screwdriver.

### Step 3

- Use the opening tool to separate the screen and the plastic body of the phone.

### Step 4

- Use the angled tweezers to remove the power/volume buttons from the inside of the phone cover.

## Step 5

- The finished product should be the volume and power buttons separated from the back casing of the phone.
