INTRODUCTION

If your device is overheating, you may need to replace the laptop's CPU Fan. This guide will help you through this process.

🔧 TOOLS:

- Spudger (1)
- Tweezers (1)
- iFixit Opening Tools (1)
- JIS #000 Screwdriver (1)
- JIS #0 Screwdriver (1)

Step 1 — Battery

⚠ Make sure the laptop is powered off.

- Flip the laptop over and locate the battery release switch.

- Insert the pointed end of the spudger into the battery release switch.

- Push the battery release switch to the right.

Step 2

- While the battery release switch is pushed to the right, carefully slide the battery out of its socket.
Step 3 — CPU Fan

- Remove the top panel of the laptop with the plastic opening tool.

Step 4

- Use a JIS #000 screw bit to remove the marked screw.

Step 5

- Carefully pull the marked green chip out of the motherboard.

Step 6

- Use tweezers to unplug the wire connecting the fan to the motherboard.

Step 7

- Use a JIS #00 screw bit to remove the marked screws around the CPU fan.

- Carefully remove the CPU fan.

To reassemble your device, follow these instructions in reverse order.
