

# Acer Aspire TimelineX 4830T-6682 Fan Replacement

Use this guide to replace the Fan in your Acer Aspire TimelineX 4830T-6682

Written By: Jon Brunsell

## INTRODUCTION

A working cooling fan in laptops is a critical component because the processor, and graphic IC's would overheat without it. Fans are a wearout part that will eventually need replacing.

This guide provides simple steps to replace the Fan on the Acer Aspire TimelineX 4830T-6682 using minimal tools that can be acquired locally, or through iFixit. Please make sure and follow the prerequisite procedures.

### TOOLS:

- [Phillips #0 Screwdriver](#) (1)
  - [iFixit Opening Tools](#) (1)
  - [Tweezers](#) (1)
  - [Phillips #1 Screwdriver](#) (1)
  - [Spudger](#) (1)
-

## Step 1 — Lower Back Panel

- Remove the single screw with a Phillips #0 screwdriver.
- Use a plastic opening tool on the upper part of the panel to remove it and access the RAM.
- ⓘ The other way to remove the panel is by sliding it away from the laptop. The difficulty of sliding it depends on the condition of your laptop.

## Step 2 — RAM

- After the panel has been removed, locate the RAM. It should be on the lower right.
- There are pins around the RAM that need to be pulled back. After the pins are removed, pull the RAM chip towards you to remove it.

## Step 3 — Keyboard

- Remove the eleven screws that hold that back panel to the laptop using a J0 Phillips screwdriver bit.

## Step 4

- Place the laptop in the upright position, the lower front touchpad panel should be easily detached at this point.
- Remove the lower front touchpad panel by using an angled tweezers to disconnect the only wired tape connected to the motherboard.

## Step 5

- Next, disconnect the 4 wired tapes of the keyboard from the motherboard just like we did with the lower front touchpad panel.

## Step 6

- Finally, using an opening tool, gently pry along the edge of the keyboard to separate it from the laptop.

## Step 7 — Battery

- The battery will be on the side closest to the screen.
- Gently lift it out. It will still be attached by white, red, and black wires.

## Step 8

- Pull the white plug, it should easily detach.
- Remove the battery from the device.

## Step 9 — Fan

- Remove the 3.4mm by 1.9mm screws with a Phillips #0 screwdriver from the fan's heatsink.

## Step 10

- Remove the plastic fan dust protector

## Step 11

- Remove the two 3.4mm by 1.9mm screws that are now exposed

## Step 12

- Separate the fan from the heat sink

To reassemble your device, follow these instructions in reverse order.
