INTRODUCTION

RAM provides programs with quick access to the data they need. The more programs you have open at once, the more RAM your computer will need.

🔧 TOOLS:

- Spudger (1)
- Phillips #0 Screwdriver (1)

Step 1 — Battery

- Place the laptop on a flat surface with the bottom side facing up.

- Place the tip of a spudger or finger into the hole on the battery release slider.

Step 2

- Use the spudger to move the slider to the right and hold it there.

- With the slider held, use your other hand to pull the battery back away from the laptop.

Step 3 — Back Cover

⚠️ This step will void your device warranty.

- Use the screwdriver to pierce the warranty sticker.

- Unscrew and remove the #0 6mm Phillips screw and set it aside.

Step 4

- Slide the back panel towards you. The best spots to place your fingers are on the bumpers.

- Lift on the front edge to remove the panel.

Step 5 — RAM
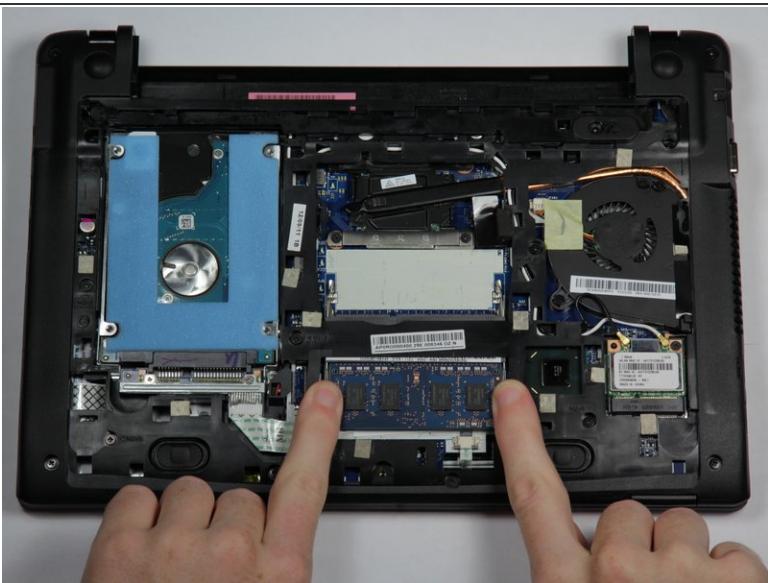

- Pull the metal tabs sideways away from the memory stick.

- The RAM stick will pop up.

Step 6
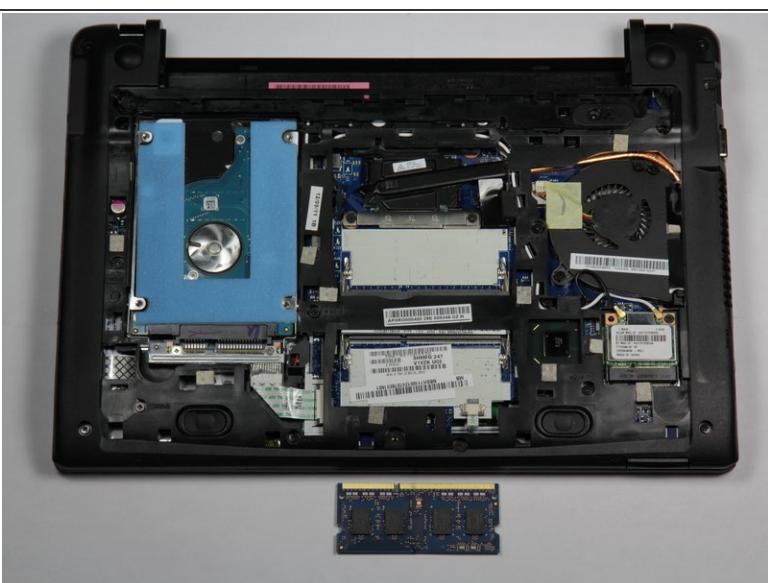

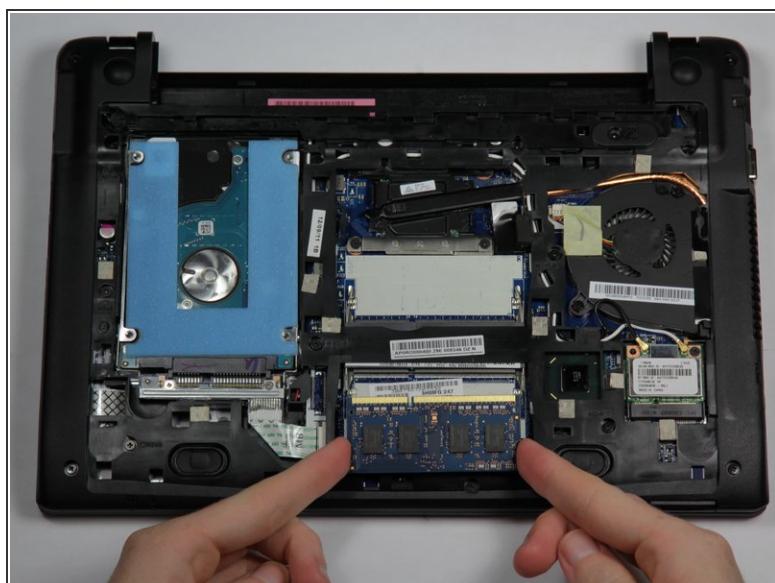

- Pull the RAM stick up and away from the laptop.
