

Acer Chromebook C710-2833 Fan Replacement

The fan pulls air from the exterior of the laptop through the computer to help prevent the interior components from overheating.

INTRODUCTION

In this replacement guide, you will learn how to safely remove and install a cooling fan.

TOOLS:

- [64 Bit Driver Kit](#) (1)
- [Magnetic Project Mat](#) (1)
- [Anti-Static Wrist Strap](#) (1)

PARTS:

- [Acer Chromebook C710 CPU Cooling Fan](#) (1)

Step 1 — Fan

- Flip your Chromebook over so the bottom is facing up.

Step 2

- Locate the 6 mm Phillips #00 screw that holds the back cover together. Use your driver with the PH00 bit attached to unscrew it.
- Once completely unscrewed, carefully lift the cover off.
- Place the cover and screw safely to the side for now.

This document was generated on 2019-10-20 07:33:23 AM (MST).

Step 3

- Now take your anti-static wrist strap and place it tightly on your wrist.
- Attach the alligator clamp of the wrist strap to something that will ground yourself to avoid possible electric zaps.
- ⓘ The location chosen in the picture is recommended.

Step 4

- Locate the two 6 mm Phillips #00 screws on the fan port.
- Unscrew the two screws and place them aside for now.

Step 5

- Carefully remove the fan from its port. You may need to use a little force as there will be an adhesive on the right side of the fan keeping it in place.
- Locate the Molex cable connecting the fan to its port in the top left corner.
- Disconnect the cable.

To reassemble your device, follow these instructions in reverse order.
