Step 1 — Back Panel

- Power down the Chromebook and disconnect the power adapter.

Step 2

- Place the chromebook bottom side up on a flat surface.
- Remove the thirteen 7 mm screws with a Phillips #0 screwdriver.

Step 3

- Insert the plastic opening tool into the slit near the hinges and pry upwards to lift the back panel.
- ❗ Applying pressure may be necessary. A click indicates the panel is ready to come off.

Step 4 — Battery

- Unplug the white 8-wire battery connector from the motherboard by using a spudger to push the two L-shaped indentations towards the battery.
- ❗ The connector is a tight fit. This process requires going back-and-forth between the two indentations and plenty of patience.

Step 5

- Remove the the two 3.7 mm screws with a Phillips #0 screwdriver.

Step 6

- Lift the battery from the frame.

To reassemble your device, follow these instructions in reverse order.
