

# Acer E5-571-54FL Cooling Fan Replacement

This guide will aid you in the replacement of the CPU cooling fan. It will also be used in other repair guides.

Written By: Aaron Weissman

## INTRODUCTION

Is your laptop overheating? Are you hearing strange noises coming from inside the case? It may be time to replace your CPU Cooling fan.

### TOOLS:

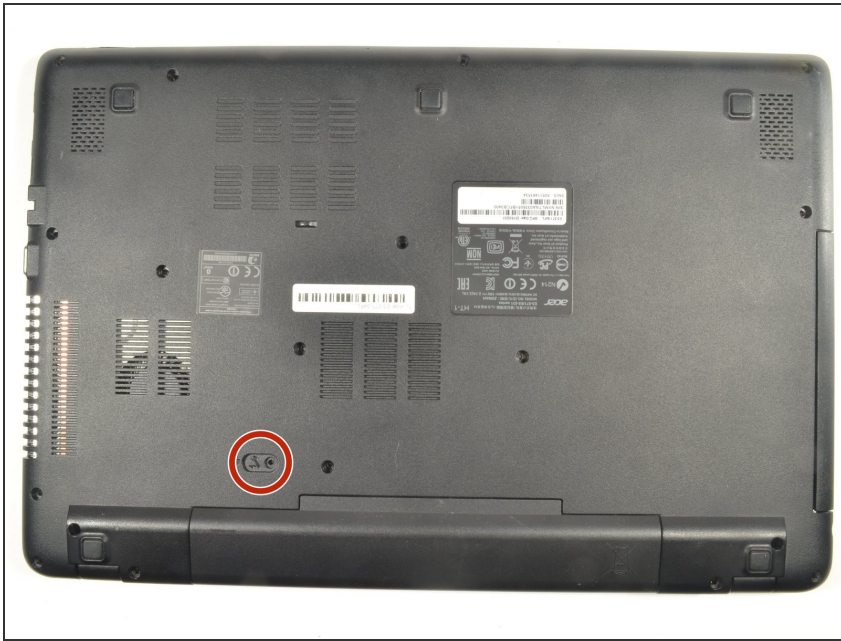

- [Phillips #0 Screwdriver](#) (1)
- [iFixit Opening Tools](#) (1)
- [Metal Spudger Set](#) (1)
- [Tweezers](#) (1)

### PARTS:

- [Acer E5-571 Cooling Fan](#) (1)
- CPU Cooling Fan

## Step 1 — Battery

- ⚠ Ensure the laptop is powered down prior to beginning.
- Turn the laptop over with the battery closest to your body.
- The battery release is just above the left side of the battery.

## Step 2

- Insert a small tipped screwdriver or similar tool into the release.
- Gently slide the release all the way to the left.
- ⓘ You should hear a sound after the slide is all the way left. This lets you know the battery has disengaged.

This document was generated on 2020-01-08 08:00:49 PM (MST).

## Step 3

- With your hands on each end of the battery, carefully pull towards your body to remove.

## Step 4 — Keyboard

- Using a #0 Phillips screwdriver, remove a total of eighteen identical 8mm Phillips screws and set them aside.

## Step 5

- Rotate the laptop 180 degrees so that the battery compartment is now furthest away from your body.

## Step 6

- Turn the laptop over so that you can easily open the screen to a vertical position.

## Step 7

- Put your fingers under the top of the keyboard assembly directly below the Acer logo.
- Carefully pull up on the center until you hear the tabs disengage from the bottom.

## Step 8

- Work your way around the seam with the plastic opening tool carefully prying the base and top cover apart.
- ⓘ If you have difficulty with the plastic opening tool, use a metal spudger **but be more cautious** to not damage or mar your laptop case.

## Step 9

- When the two halves are separated, carefully lift up the front of the keyboard and touchpad assembly.
- You will see three ribbon cables attached to the motherboard.

## Step 10

- Closest to the ribbon cable on the zero insertion force (ZIF) connector is a **white** locking tab.
- Carefully lift up on the locking tab with the plastic opening tool to release the ribbon cable. (Picture 2)
- Remove the ribbon cable from the connector.

## Step 11

- Closest to the ribbon cable on the ZIF connector is a **black** locking tab.
- Carefully lift up on the locking tab with the plastic opening tool to release the ribbon cable. (Picture 2)
- Remove the ribbon cable from the connector.

## Step 12

- On each side of the large connector there are two white tabs.
- Carefully push away from you with the plastic opening tool on each white tab to release the cable. (Picture 2)
- Remove the ribbon cable from the connector.

## Step 13

- Once all three ribbon cables are disconnected, lift off the top cover with the keyboard and touchpad.

## Step 14 — Cooling Fan

- The CPU Cooling Fan is in the upper left corner of the laptop.
- Using a #0 Phillips screwdriver, remove the two 4.5mm screws holding the fan to the case.

## Step 15

- Place the tips of the ESD safe pointed tweezers between the plug and socket of the fan connection.
- Gently push left to disconnect the fan plug.
- Move the fan connector and wires free of the motherboard and WiFi card.

## Step 16

- Lift the curved end of the fan about 30 degrees.
- Remove the fan by moving your hand up and to the right until it is clear of the case.
- ⓘ If you feel resistance, check to be sure the fan connector and wires are not stuck under the motherboard or WiFi card.

To reassemble your device, follow these instructions in reverse order.
