## INTRODUCTION

Tearing down a water damaged Alcatel One Touch Fierce from Metro PCS.

### TOOLS:

- [Phillips #000 Screwdriver](#) (1)
- [iSesamo Opening Tool](#) (1)

## Step 1 — Alcatel One Touch Fierce Teardown

ALCATEL  
ONE TOUCH  
FIERCE

### TEARDOWN

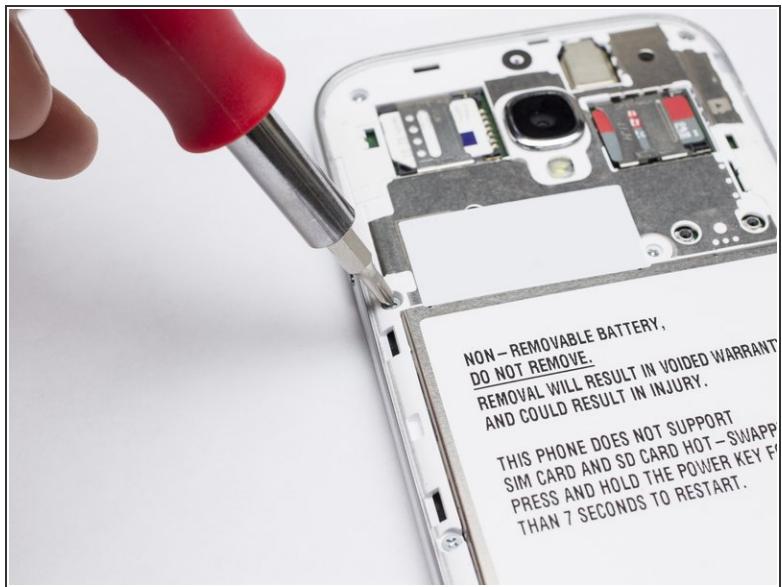

- Phillips #000 is highly recommended. As you can see I'm too broke for the iFixit equivalent.
- The iSesamo is also always handy.

## Step 2

- This is the Metro PCS variant of the phone in a nice metallic silver color.
- The front of this particular device is water damaged and finger print damaged.

## Step 3

- With the back plastic removed.
- "DO NOT REMOVE"
- Challenge accepted

## Step 4

- The second cover is removed. We now have a better look at the components.

## Step 5

- The battery. Doesn't last very long.

## Step 6

- The 5MP camera located on the back of the phone.

## Step 7

- The daughter board contains the Micro USB port

## Step 8

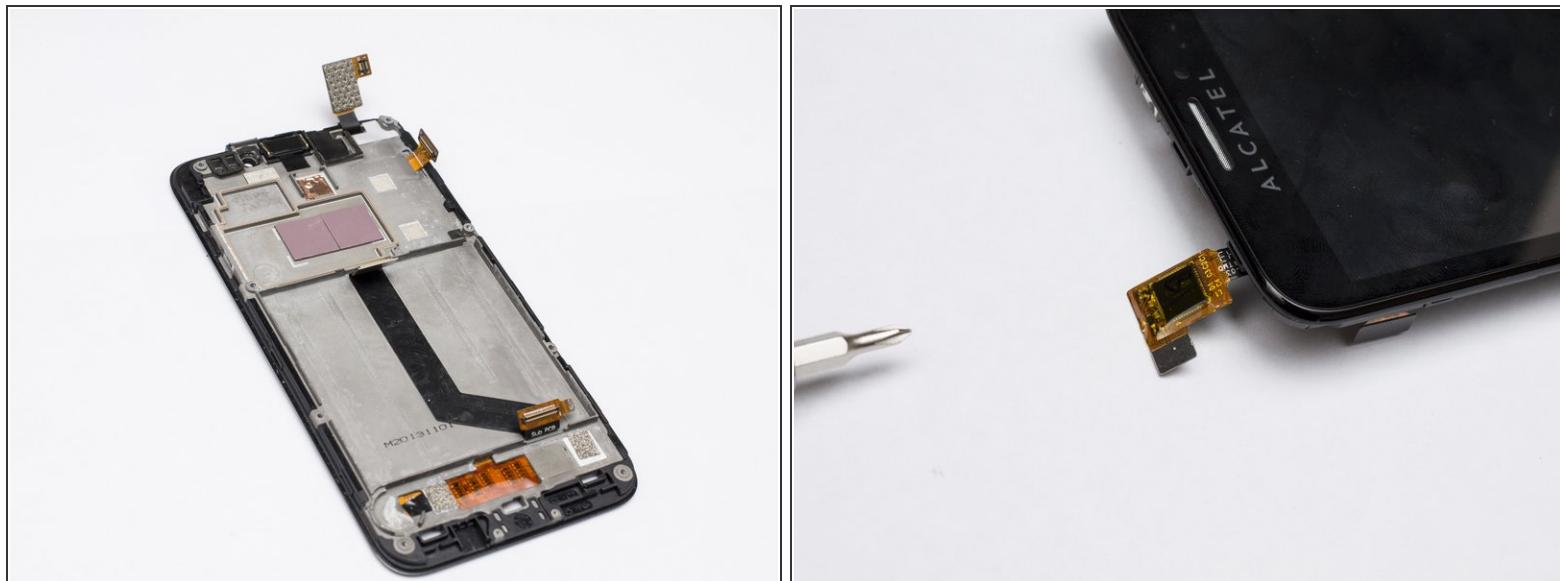

- The main PCB

## Step 9

- The VGA camera located on the front of the phone.

## Step 10

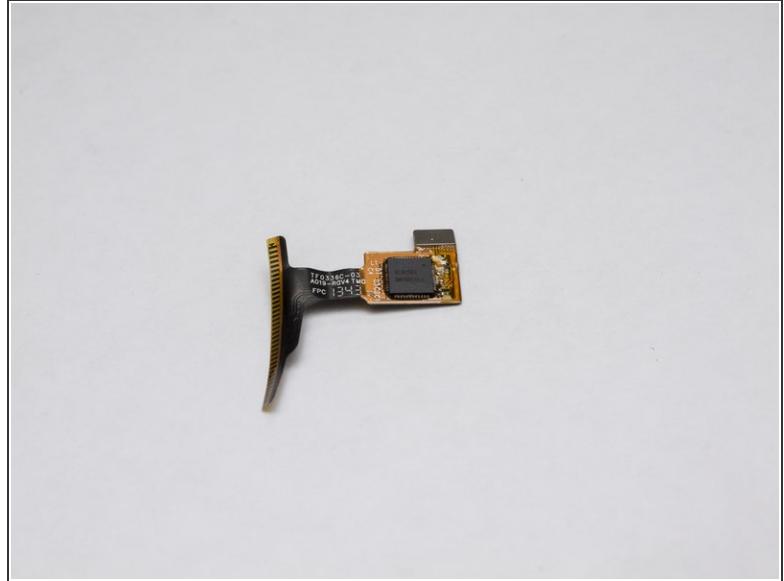

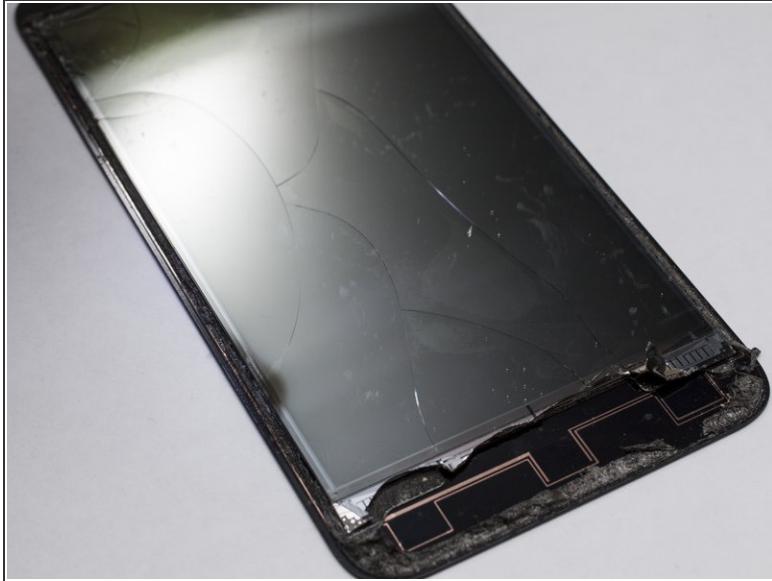

- The remains of the front panel

## Step 11

- Trying to remove the front panel assembly.
- It seemed to have quite a bit of adhesive.
- Luckily i have a good amount of picks available.
- Oh no, i think i hear cracking...

## Step 12 — Shoot..

- Crap! i totally saw this coming.
- To avoid this use a heat gun to loosen the glue...not too much heat though.

## Step 13

- I now have a functional phone without an LCD screen.

To reassemble your device, follow these instructions in reverse order.
