Step 1 — Back Cover

- Remove the two 00 Phillips screws located in the right hand side of the tablet.
Step 2

- Use plastic opening tools to loosen and pry off the back plate (pink piece).

⚠️ When removing the cover, be careful not to pull too hard as there are wires connected to the motherboard attached to the back cover.

Step 3 — Camera

⚠ It is recommended that a grounding bracelet be used in order to avoid damage to the device's circuits through ESD (Electro-Static Discharge)
● Start by removing the electrical tape covering the camera, located at the top left corner of the device.

ⓘ Remove enough tape to expose the ZIF connector and the camera.

Step 4

- Lift up the black plastic lock on the ZIF connector with tweezers.

- ⓘ ZIF stands for Zero Insertion Force connector. Make sure the connector is unlocked completely.

Step 5

- Gently remove the camera by removing the power cord with tweezers. The camera should release easily: do not twist or pull too hard.

- Replace the camera with a new one.
