

# Apple AirPort Extreme Model A1034 Internet Card Replacement

Written By: Michael Garcia

 **TOOLS:**

- **Phillips #00 Screwdriver (1)**

## Step 1 — Outer Case

- Remove the three 14.3mm T7 Torx screws from the bottom of AirPort.

## Step 2

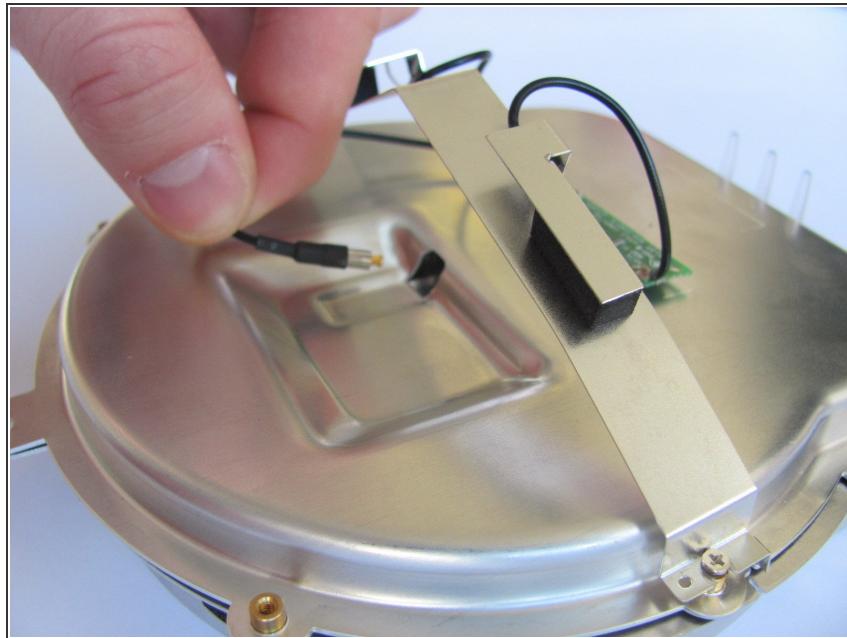

- Remove the 5.1mm Phillips screw from the bottom of the AirPort. This screw is located under the identification sticker. You will have to remove the sticker or make a hole to remove it.

## Step 3

- Lift the bottom and top casing straight apart and then lift metal casing straight up from the bottom plastic casing.

## Step 4

- Unplug the black connector on the top of the metal casing by gently pulling horizontally.

## Step 5 — Internet Card

- Remove four 1mm phillips screws from the bottom.

## Step 6

- Separate the top and bottom of the metal casing. You will now expose the motherboard and AirPort card.
- To remove the AirPort card, gently pull the plastic tab horizontally.

To reassemble your device, follow these instructions in reverse order.
