

Apple PowerBook G3 400 Keyboard Replacement

This guide can be used to install a new keyboard to replace an old or broken keyboard.

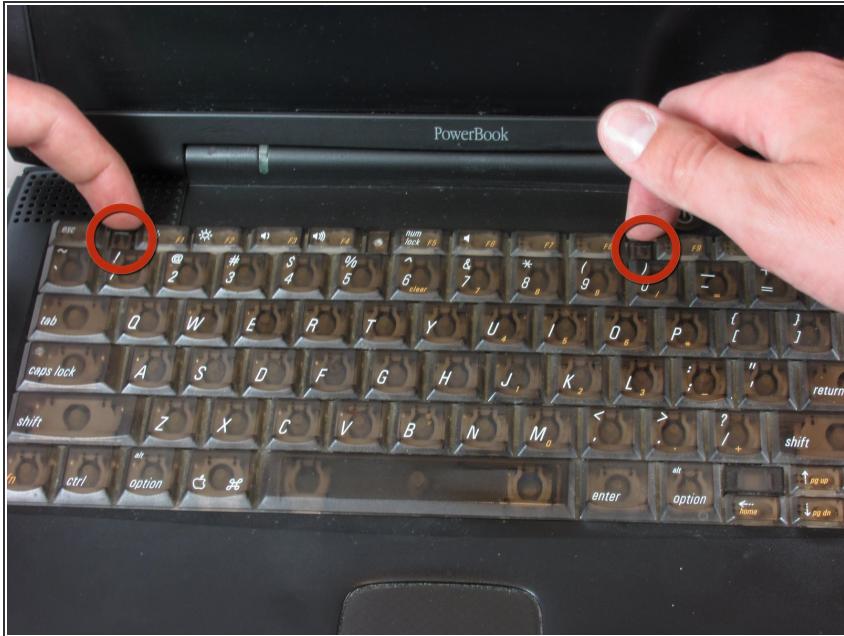

Written By: Byron Hoefer

INTRODUCTION

This guide will show you how to replace the keyboard in a simple step by step process.

Step 1 — Keyboard

- Pull the keyboard tabs toward you while lifting up on the keyboard until it releases from its hold.
- To lift the keyboard out pull it up and away from you. Then place the keyboard on the track pad.

Step 2

- Pull the keyboard ribbon vertically from the logic board to release connection.
- *(i)* The connector may be tight and difficult to remove. If stuck try rocking the connector back and forth while pulling up until it releases. This same process can be used for many of the connectors on this device.
- *(i)* Remove battery and CD/DVD drives before proceeding any further.

Step 3

- Your computer should look approximately like this.

To reassemble your device, follow these instructions in reverse order.
