

# Asus Chromebook C101P Touchpad Replacement

How to replace an Asus Chromebook C101P touchpad.

Written By: Bryan Acosta

## INTRODUCTION

Replacing the Asus Chromebook C101P touchpad is a simple procedure, so if you ever spill liquid onto your touchpad and it refuses to work anymore, don't be scared. With just a few steps, you'll be able to have a functioning touchpad again. **It is important** that you unplug and shut your Chromebook off before attempting this replacement in order to prevent electrocuting yourself.

### TOOLS:

- [T5 Torx Screwdriver](#) (1)
- [iFixit Opening Tools](#) (1)
- [Tweezers](#) (1)
- [Phillips #0 Screwdriver](#) (1)

## Step 1 — Keyboard

- Flip the Chromebook so that the bottom is facing up.
- Remove the eight T5 Torx screws.

## Step 2

- Remove the four rubber grips on the bottom side of the Chromebook using an opening tool.

### Step 3

- Remove the four black screws where the rubber grips were.

### Step 4

- Reorient the Chromebook so the right side is facing upwards.
- Wedge an opening tool or spudger between the keyboard (upper case) and the lower case of the bottom portion of the Chromebook.

## Step 5

- Pull back the black lever on the base of the cable. While pulling back, take your tweezers and pull back on the large ribbon cable.
- Pull back the black lever on the base of the cable. While pulling back, take your tweezers and pull back on the small ribbon cable.
- Separate the keyboard from the rest of the laptop.

## Step 6 — Touchpad

- Remove the three Phillips #0 screws holding the trackpad in place.

## Step 7

- Using tweezers, pull the cable free from the touchpad.
- Using tweezers, pry off the tape holding the touchpad down.

To reassemble your device, follow these instructions in reverse order.
