Step 1 — Mousepad

- Flip the Chromebook on its front.

- Remove the screws on the back using the Phillips #1 screwdriver.

- Remove the six 8mm screws.

- Remove the five 5mm screws.

Step 2

- Separate the plastic case from the keyboard at the seam by using a plastic opening tool.

Step 3

- (i) The small and wide ribbon cables connect the keyboard to the motherboard.

- Disconnect the small ribbon cable by lifting the flap and sliding it out of the motherboard input toward the battery using a spudger.

- Disconnect the wide ribbon cable by lifting the flap and sliding it out of the motherboard input toward the battery using spudger.

Step 4

- Remove the keyboard and flip it onto its front. You should see the back of the mousepad.

- Lift the foil strips to reveal two hidden screws. Then remove all four 2mm screws from the top of the trackpad with the Phillips #1 screwdriver.

- Remove the mousepad by sliding it upward.

To reassemble your device, follow these instructions in reverse order.
