Step 1 — Keyboard

- Flip the Chromebook onto its back, where there are eleven screws.

- There are two variations of screws on the back panel:

  - Six 8.7mm screws.

  - Five 6.4mm screws.

- Using your screwdriver with the J00 Phillips Head tip, remove the screws by turning them counter clockwise.
Step 2

- Once the screws are removed, flip the Chromebook back over.

- Gently remove the keyboard by starting to lift up on one corner with a plastic opening tool.

- Follow around the brim of the keyboard until it pops off.

Step 3

- Once you remove the keyboard, it will be connected to the CPU with two tabbed connections.

- Release the connections from the tabs gently by flipping the white flaps up until disconnected.

- You can now pull the ribbons out from the board and remove the keyboard.

Step 4 — Battery

- Once the keyboard is removed, the battery is located on the bottom portion of the shell.

- The battery is held in with six 6.5mm screws on opposing sides.

Step 5

- The battery is now held in with a tabbed connection to the CPU on the left side of the board. On the tabbed connection, there is a silver plate.

- Gently push on the silver plate towards the screen until the plastic connection is free.

- The tabbed connection should now slide out backwards.

Step 6

- At this point, using the plastic removal tool, lift the battery out of the shell.

To reassemble your device, follow these instructions in reverse order.
