INTRODUCTION

The RAM is located under the plastic casing of the laptop. Before starting the guide, make sure the laptop's charger is not plugged in.

🔧 TOOLS:
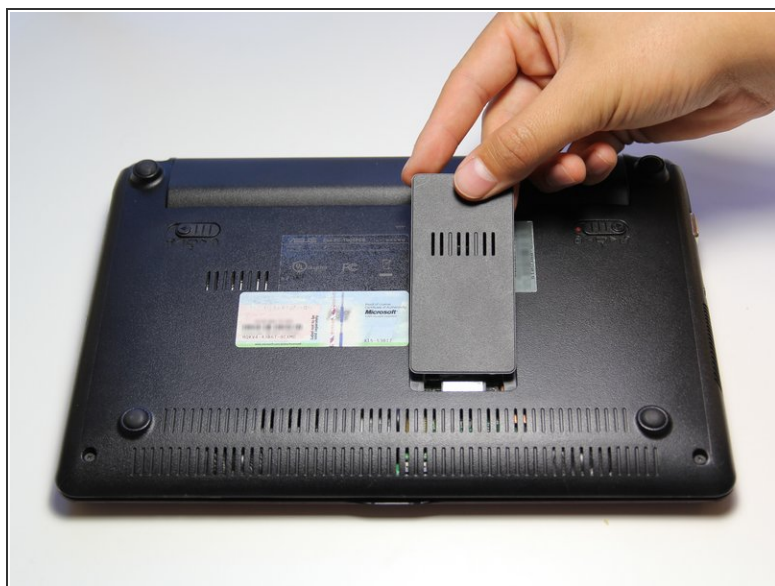

- Phillips #1 Screwdriver (1)

Step 1 — RAM

- Start by having the laptop upside down on a hard flat surface.

- Find and unscrew the 6.65 mm Phillips #1 screw.

- ⓘ The screw will not detach from the RAM cover.

Step 2

- Carefully remove the cover by lifting it with your fingers.

⚠ Make sure that you do not pull the cover to quickly or too hard as this could damage the plastic pins that hold the cover on.

Step 3

- Identify the pins on both sides of the RAM.

- Using both hands, pull the pins apart from each other to release the RAM.

- (i) The RAM will "pop" up on its own after the pins are pressed.

Step 4

- Grab the RAM stick with two fingers and gently pull it out of its slot.
