# INTRODUCTION

If you have updated your keyboard drivers and the keyboard is still unresponsive, you can use this guide to replace it. You will need a Phillips #0 screwdriver and a plastic opening tool.

## 🔧 TOOLS:

- Phillips #0 Screwdriver (1)
- iFixit Opening Tools (1)

## Step 1 — Keyboard

⚠️ Make sure the notebook is off and has been unplugged from any power source.

● Flip the notebook over and remove the 10 screws from the back plate with a #0 Phillips head screwdriver.

ⓘ Six (6) will be 9.6mm and four (4) will be 12.7mm.

## Step 2

● Flip the notebook back over.

● Gently lift and remove the keyboard with a plastic opening tool.

## Step 3

- (Not pictured) Remove the three cables attached to the keyboard and one from the touch-pad.

- (Not pictured) With the plastic opening tool, pry off the metal separation plate from the keyboard.

- (Not pictured) With the plastic opening tool, gently pry the keyboard from its position and replace.

To reassemble your device, follow these instructions in reverse order.
