Step 1 — RAM

- Using a flathead screwdriver, spudger, or large coin such as a quarter, remove the large 13mm screw on the bottom of the laptop.

- Take off the back panel.

Step 2

- Locate the RAM near the center of the computer.

- Push gently on the metal pins that are on both sides of the RAM sticks.

- ⚠ Before touching the RAM, discharge any built-up static by touching a metal surface or wearing an antistatic wrist strap.

Step 3

- When you push on the pins, the RAM will pop up. Gently remove it from its socket.

- Repeat the third and fourth step for the second stick of RAM, located behind the first stick.

To reassemble your device, follow these instructions in reverse order.
