## INTRODUCTION

If the device does not work like it used to, the device may have damaged RAM. Replace or Install new RAM into your device using this guide.

### TOOLS:

- [Phillips #0 Screwdriver](#) (1)

### PARTS:

- [RAM](#) (1)

## Step 1 — RAM

- Shut down the computer and disconnect all external devices connected to it.
- Place the laptop face down. Position the computer with the front towards you.

## Step 2

- Loosen the two screws (12mm) on the bottom panel of your device using a Phillips size 0 bit.
- Use the grips to slide the panel off.
- Remove the panel by lifting it off the device.

## Step 3

- Identify the slot for the RAM in your device.
- Slide the replacement RAM in until you hear a clicking sound.

To reassemble your device, follow these instructions in reverse order.
