Step 1 — Disc/Optical Drive

- Place the device upside-down. Unscrew the screw at the top of the cover and remove the cover by using a plastic opening tool.

Step 2

- Remove the screw that is located on the right edge of the removed cover. The screw is in a small opening.

Step 3

- Inside the opening that the screw was in, use a nylon spudger or any thin tool to push against the inside edge of the disc/optical drive.

- With the disc/optical drive slightly popped out of the socket, pull the rest of it out by hand.

To reassemble your device, follow these instructions in reverse order.
