INTRODUCTION

Prerequisite-only guide to remove the RAM door.

🔧 TOOLS:

- iFixit Opening Tools (1)
- iFixit Opening Picks set of 6 (1)
- Phillips #00 Screwdriver (1)

Step 1 — Remove the RAM access door

- Use an opening tool to pry up the small rubber cover on the upper right corner of the RAM access door.

Step 2

- Remove the 5.3 mm Phillips #00 screw securing the RAM access door.
- (i) This screw is held in the hole in the door with a washer and will not come out of the hole, even after you unscrew it.

Step 3

- Insert the point of an opening pick in the seam near the top right corner of the RAM access door and gently pry the door up slightly.

- The door is held in place by small clips around its edges. Pry until you feel the nearest clips release.

Step 4

- Insert the wide edge of an opening pick into a new part of the seam between the door and the computer.

- Pry the door up to release the clips closest to the pick.

- Continue to slide the pick along the seam all the way around the door, prying as you go, until all the clips holding the door down have been released.

Step 5

- Remove the RAM access door.

To reassemble your device, follow these instructions in reverse order.
