Step 5

- Use the size 0 Phillips screwdriver and remove the nine screws from the back panel. The four you need to remove across the top are 3mm and the four across the bottom are 2.5mm.

- The screw in the top right, shown where the screwdriver is, is a 5mm screw.

Step 6

- Use tweezers and remove the black tape from the back panel.

Step 7

- Remove the metal back panel from the keyboard.

Step 8

- Flip the connectors back to release the wires

- Take the white tab and gently pull it to the right in order to release the connecting piece.

Step 9

- Remove the screw from the green plate.

- Once all of the screws are out, remove the plate.

Step 10

- Place soldering tool on each of the four connecting pieces in the corner until each becomes unattached.

- Remove old USB input and replace with the new one.

To reassemble your device, follow these instructions in reverse order.
