

# Asus U47VC-DS51 Motherboard Replacement

If you have slow computer speeds and frequent computer crashes, then you should replace your motherboard.

Written By: Murphy Villegas

# INTRODUCTION

This guide shows how to completely take out the motherboard for a total replacement.

## TOOLS:

- [Phillips #00 Screwdriver](#) (1)
  - [Spudger](#) (1)
-

## Step 1 — Hard Drive

- Remove the hard drive cover.
  - Unscrew one 8mm Phillips #00 screw.
- Using the black spudger, insert its flat end under the hard drive's covering, working around to pry it off.

## Step 2

- Remove the hard drive.
  - Unscrew the four 3mm Phillips #00 screws.
- Pull the hard drive's black tab away from the laptop to free it.

## Step 3 — Keyboard

- Remove 9 screws from bottom of notebook using PH00 bit + 1 under hard drive bay.
- Remove 3 screws from bottom of notebook using PH00 bit. 1 is same screw spec as the other 9, and 2 are shorter.

## Step 4

- Using the black spudger, insert its flat end between the crevice where the color changes from grey to black.
- ⓘ The keyboard is very tightly secured.
- Carefully ease the spudger's end along the crevice, going around the entire frame.
- ⚠ The back connectors are short, so be careful when lifting.

## Step 5

- Lift the keyboard from the front where it is closest to the screen.
- Disconnect the large and small ZIF connectors attached to the motherboard by flipping the light-colored part of the switch.

## Step 6

- Remove the third and last ZIF connector on the motherboard by flipping up the dark-colored part of the switch.
- Now, the component should come completely free.

## Step 7 — Motherboard

- Unscrew the one 8mm screw using a Phillips #00.
- Using the black spudger, slightly pry up on the tab and gently pull the optical drive away from the laptop in order to remove it.

## Step 8

- Using the black spudger, slowly lift up on the cable connectors and pull them away from the connectors.
- ⓘ Repeat steps on both cables.
- Unscrew the 12 8mm screws using a Phillips #00 screwdriver.

## Step 9

- Lift up on the motherboard and disengage the two connectors.
- Disconnect the cooling fan connector.
- Unscrew the 7 8mm screws holding in the cooling fan using a Phillips #00 screwdriver.

To reassemble your device, follow these instructions in reverse order.
