TOOLS:
- Spudger (1)
- Phillips #0 Screwdriver (1)

PARTS:
- Keyboard (1)

Step 1 — Keyboard
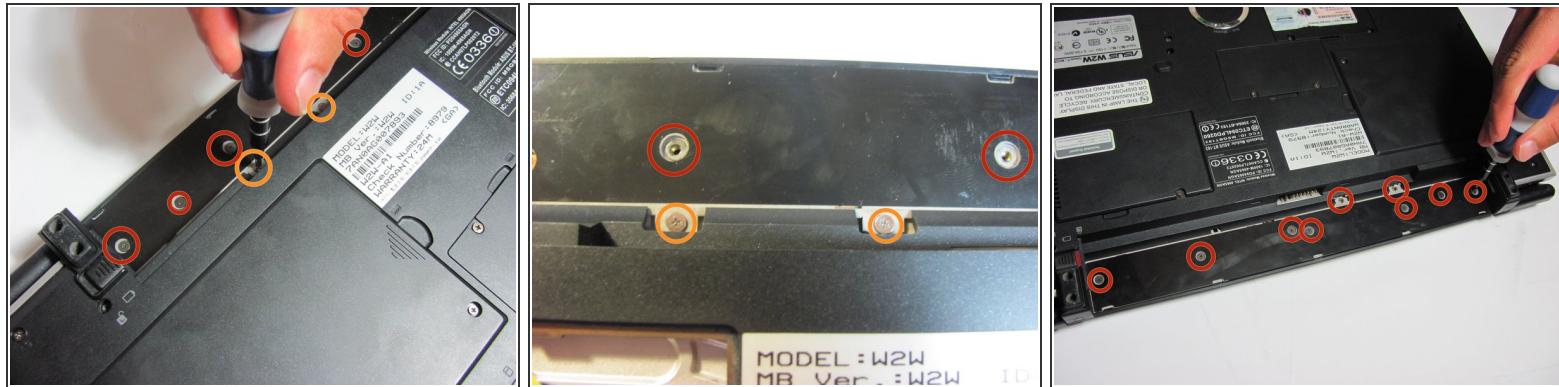

- Remove the battery, then unscrew the 7 3 mm Phillips screws behind the battery. Make sure they go in separate, organized piles.

- Unscrew the 2 4 mm Phillips head screws by the battery.

Step 2

- Remove the panel above the keyboard with a plastic spudger.

Step 3

- Once the panel is removed, use the spudger to pry out the keyboard.

- ⚠ Do not fully remove, for the keyboard is still attached to the ribbon cable.

Step 4
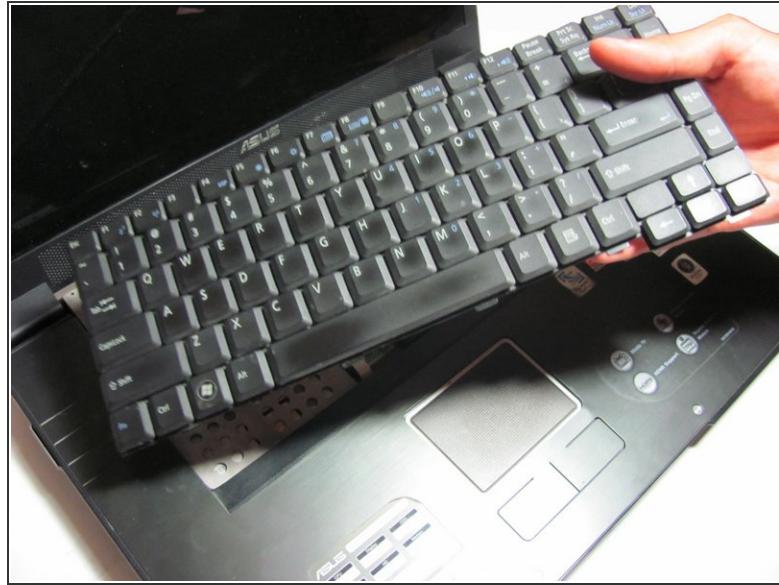

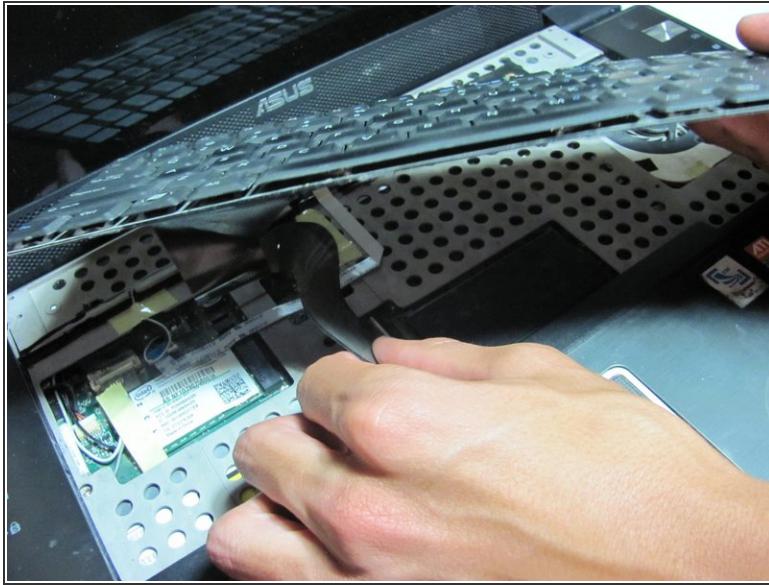

- Detach the ribbon cable from the keyboard by pulling the end of the ribbon cable that is attached inside of the laptop.

- ⚠ Be sure to detach from the root rather than from near the middle. It should slide out with ease.

- Now you can fully remove the keyboard from the laptop.
