

# Asus X502C-RB01 Hard Drive Replacement

This guide will detail how to replace the internal hard drive.

Written By: Jaspal Chauhan

## INTRODUCTION

If your hard drive has failed or needs to be replaced, this guide will show you how to get to the hard drive and remove it.

### **TOOLS:**

- [Phillips #0 Screwdriver](#) (1)
- [iFixit Opening Tools](#) (1)

**Prying Tool**

- [Spudger](#) (1)

## Step 1 — Keyboard Panel

- Turn off the laptop and flip it face down.
- Using a Phillips #0 screwdriver, remove the seven 9mm screws circled in red.
- With the same screwdriver, remove the four 5mm screws circled in orange.

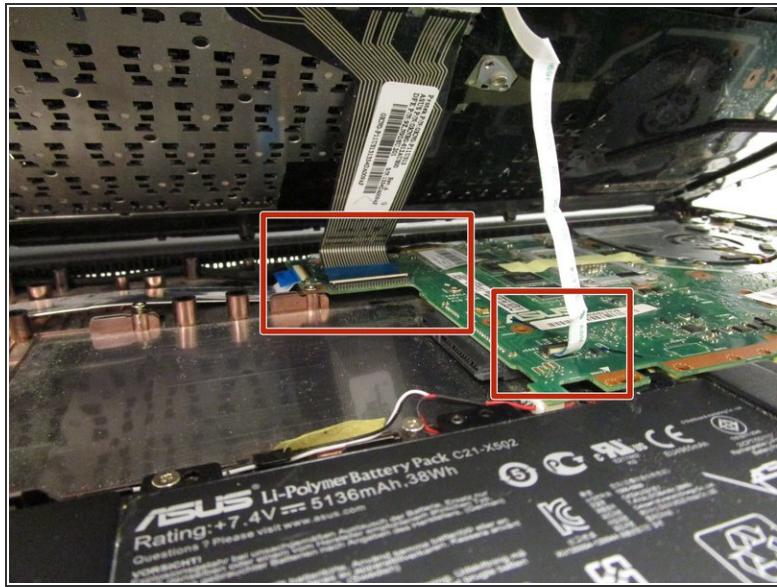

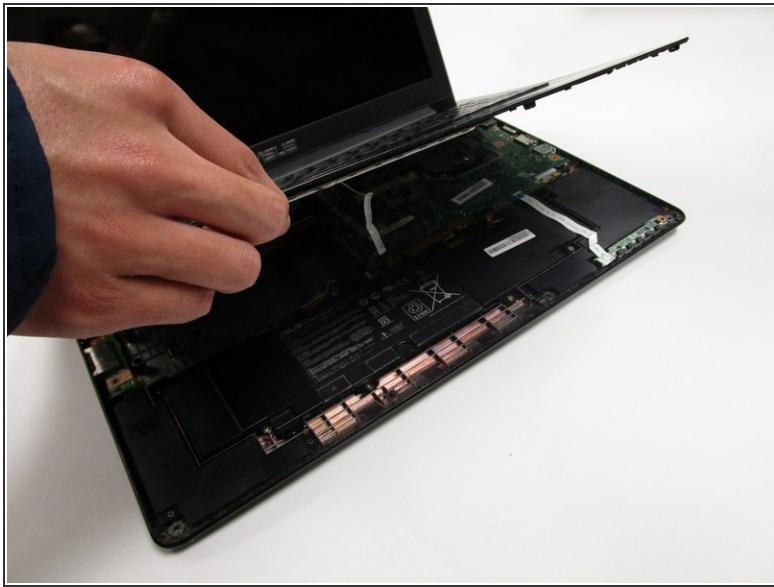

## Step 2

- Flip the laptop face up and open the lid.
- Use the plastic opening tool to pry around the entire edge of the keyboard panel to loosen the panel from the base.

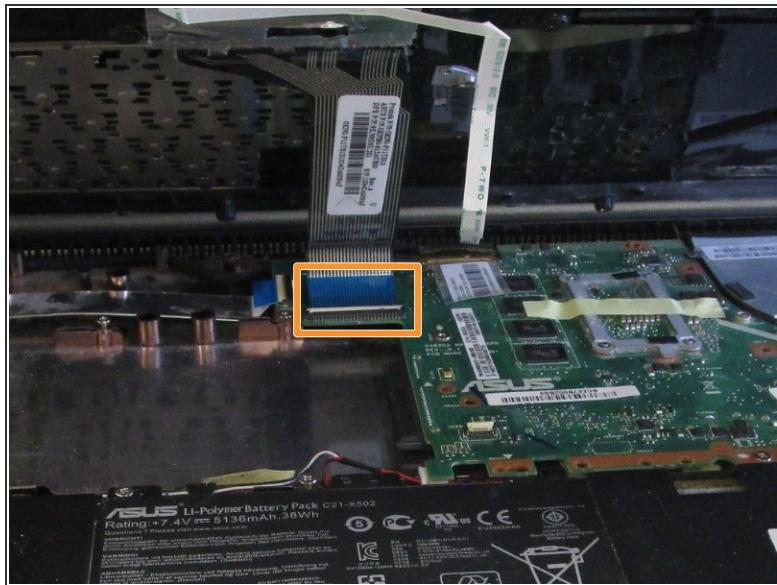

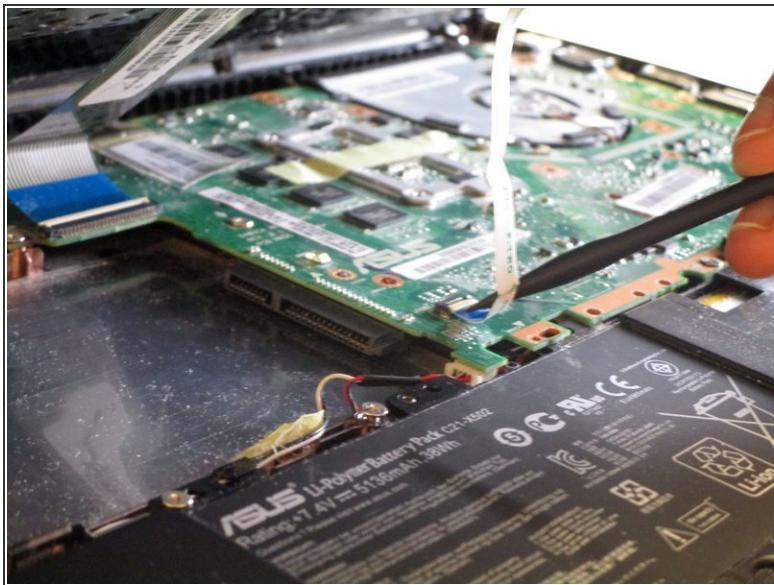

**⚠** Be careful not to lift the panel just yet, as it is still connected to the motherboard.

## Step 3

- Partially lift the panel up, revealing the two cables connected to the motherboard.

## Step 4

- Disconnect the first ZIF cable by lifting the tab using the spudger tool or your fingernail and gently pull the cable out.
- Disconnect the second ZIF cable by lifting the tab using your fingernail and gently pull the cable out. This one is more difficult to reach with the spudger.

## Step 5

- Remove the keyboard panel completely and set it aside. The internal components of the laptop are now exposed.

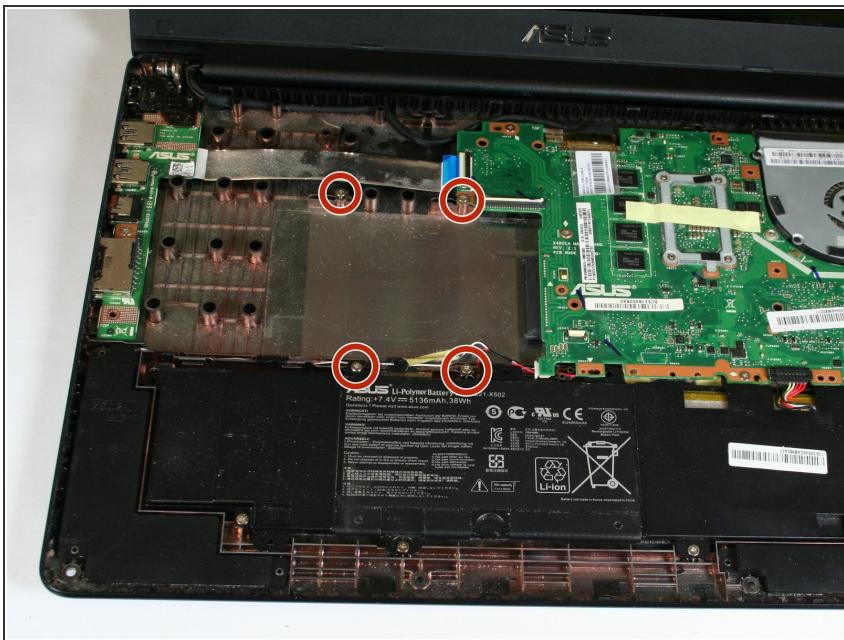

## Step 6 — Hard Drive

- Locate the hard drive in the area highlighted in red.

**i** This demonstration model does not have a mounting bracket around the hard drive.

## Step 7

- Remove the four 5mm screws from the hard drive mounting bracket using the Phillips #0 screwdriver.

## Step 8

- Slide the hard drive in the direction away from the connector and lift it up to remove it.

To reassemble your device, follow these instructions in reverse order.
