 **TOOLS:**

- [T4 Torx Screwdriver \(1\)](#)
- [Tweezers \(1\)](#)
- [iFixit Opening Tools \(1\)](#)

## Step 1 — Remove the front screen

- wedge the plastic opening piece underneath the bottom left hand corner of the front frame. Pry the frame off of the Nook.

## Step 2 — Remove the screws

- Remove every visible screw tying the chassis to the bottom frame using the T-4 attachment for the screwdriver in the iFixit screwdriver kit.

## Step 3 — Remove the chassis

- Remove every visible screw tying the chassis to the bottom frame using the T-4 attachment for the screwdriver in the iFixit screwdriver kit.

## Step 4 — Detach battery

- detach the battery ribbon from the motherboard.

## Step 5 — Flip the nook

- flip center chassis so that the back of the screen is facing you, and the hole is positioned in the bottom right corner.

## Step 6 — Detach the screen from chassis part 1

- Remove copper tape above the antenna, 3 quarters of the way up the left side of the nook.

## Step 7 — Detach the screen from chassis part 2

- Locate thin orange strip on the top side of the motherboard. Apply tweezers to the black casing that locks it into the motherboard (plastic piece will completely come out).

## Step 8 — Detach the screen from chassis part 3

- Locate the foam covered orange strip on the motherboard. Pull up (away from motherboard) so that it is no longer connected to the motherboard.

## Step 9 — Take motherboard away from the screen

- Lift motherboard away from the screen. Pull frame off of the screen.

## Step 10 — Place new screen

- Put the new screen back into place in the frame (the reverse of step 9). Place motherboard back into place on the back of the screen. And follow steps in reverse order to reassemble.

To reassemble your device, follow these instructions in reverse order.
