

Black and Decker BL3000S Circuit Board

Remove the circuit board from the Black and Decker BL3000S.

Written By: Andrew

 **TOOLS:**

- 2.5 mm Flathead Screwdriver (1)
- Phillips #1 Screwdriver (1)
- TA20 Screwdriver (1)

Step 1 — Blender Base

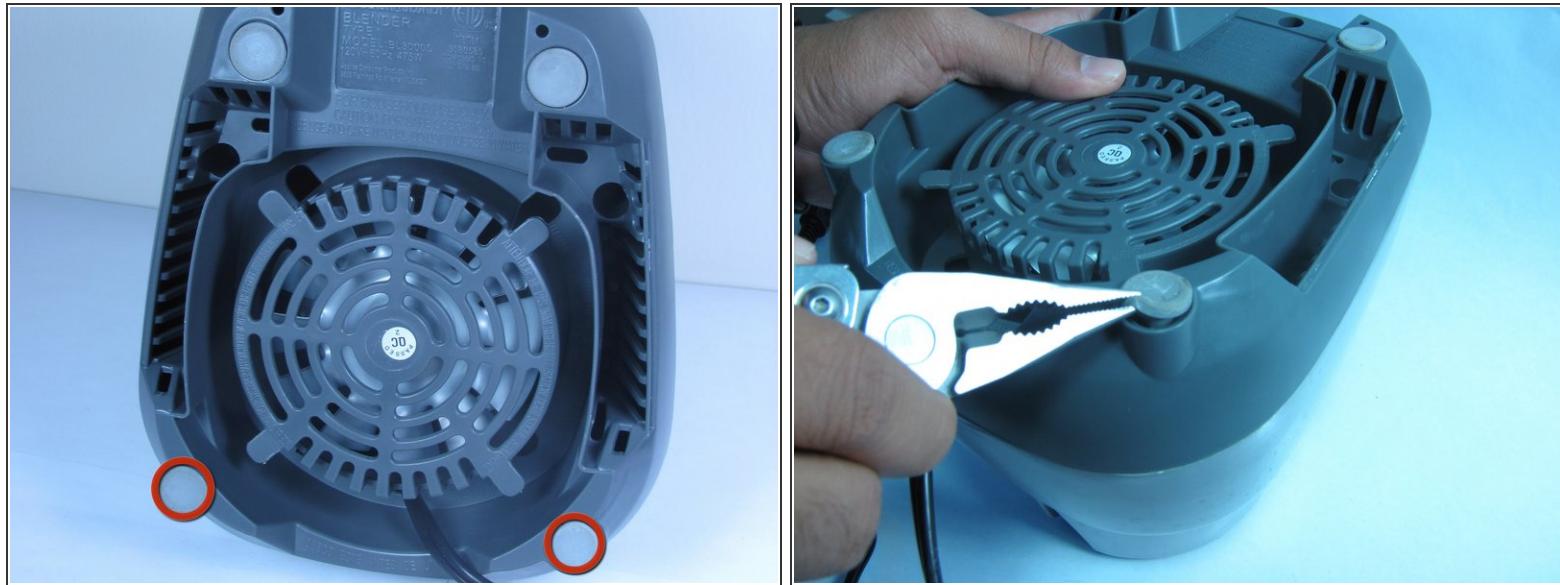

- ❶ Before disassembling the blender base, make sure the blender disconnected from any power outlet.
- Lift the jar straight up from the base without tilting the jar.

Step 2

- Remove the top three 1/4 inch base screws using a Philip's head screwdriver.

Step 3

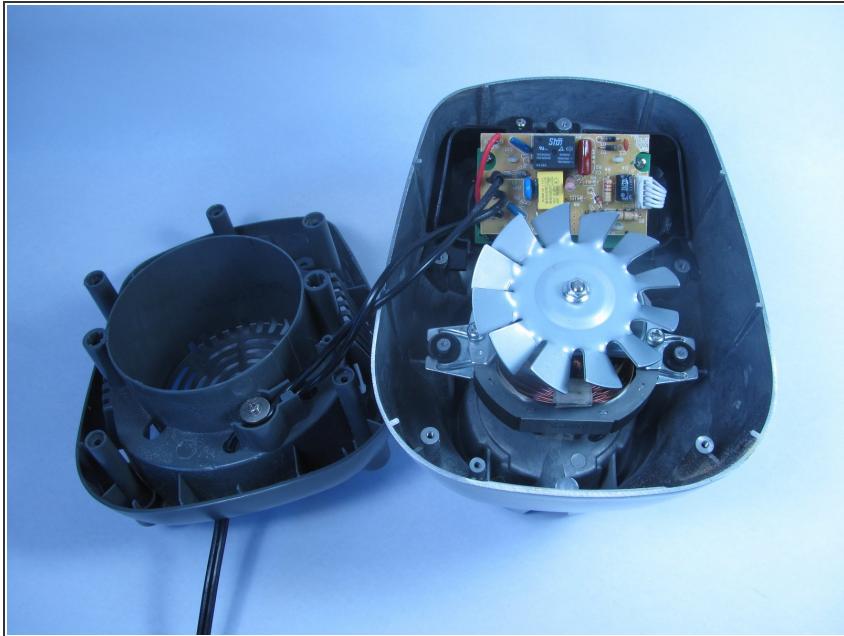

- Remove the two base leg covers next to the power cord using pliers or a flat-head screwdriver.
- *(i)* This provides access to the base screws beneath.

Step 4

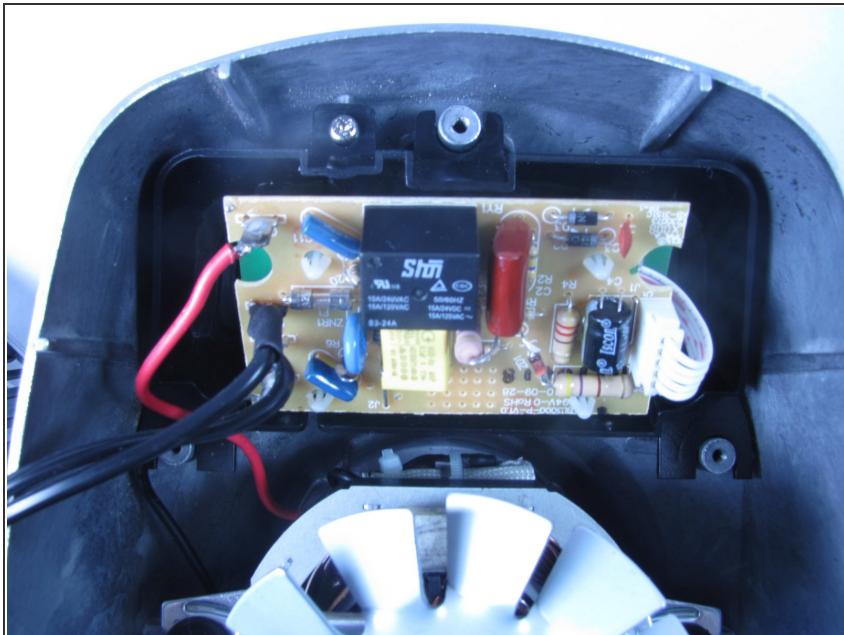

- Remove the following screws that secure the top and bottom halves of the base.
 - One 1/4 Phillips screw
 - One TA-20 screw
- *(i)* Both screwdrivers must have a minimum of a three inch shank (length).
- *(i)* Screwdrivers with extenders will not fit down the access holes.

Step 5

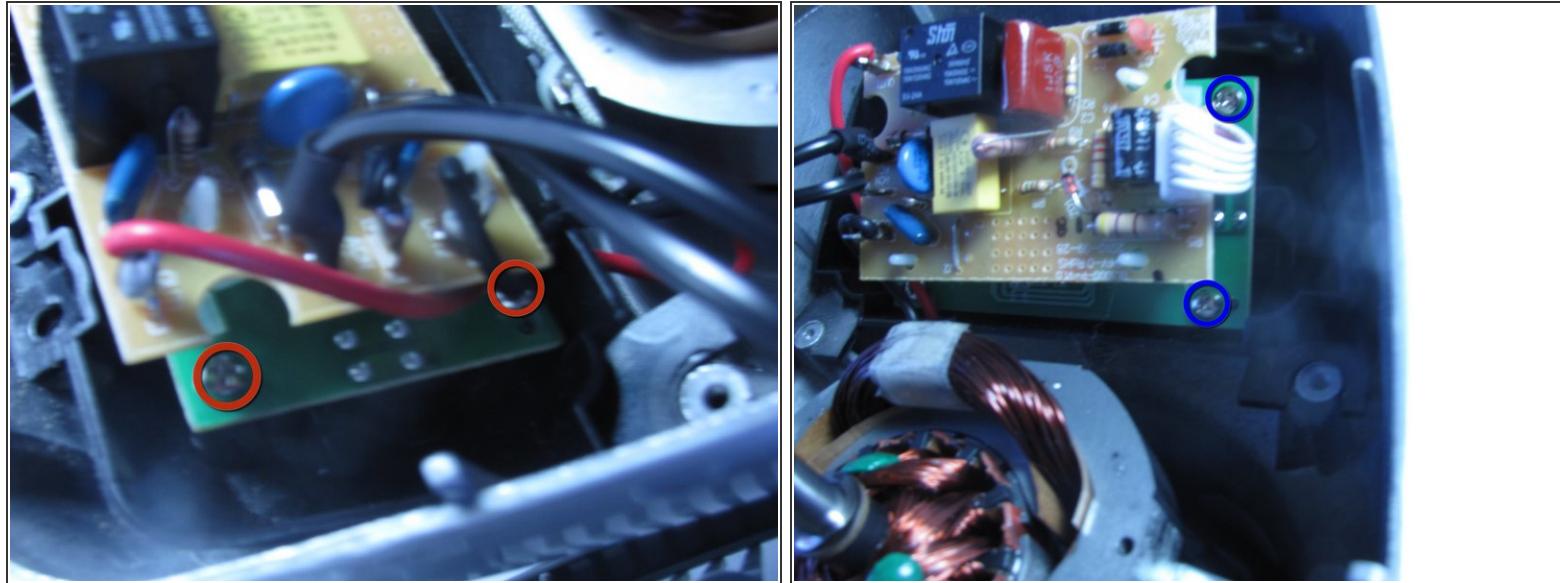

- Lift the top half of the base from the bottom half of the base to reveal the internal mechanism.

Step 6 — Circuit Board

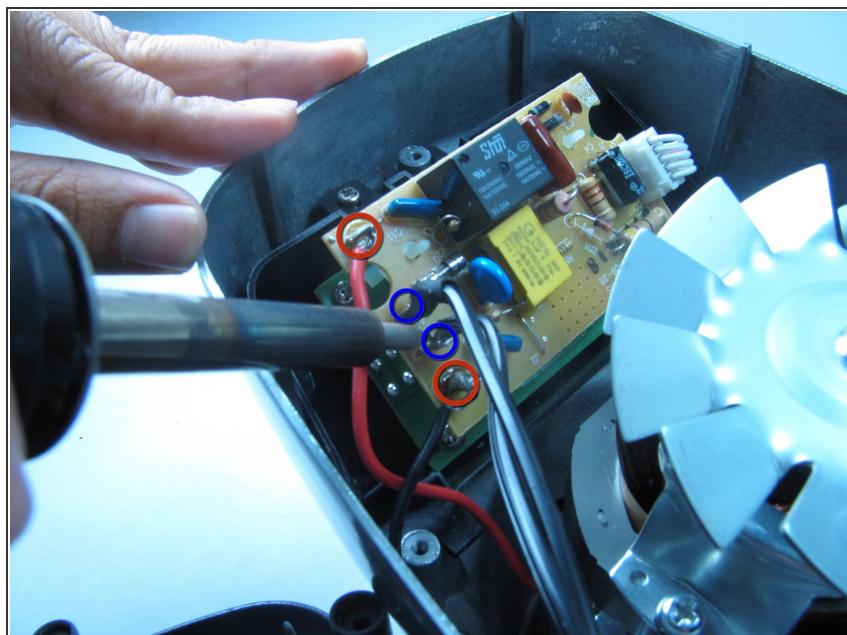

- Once you have the base removed, the circuit board should be clearly visible inside.

Step 7

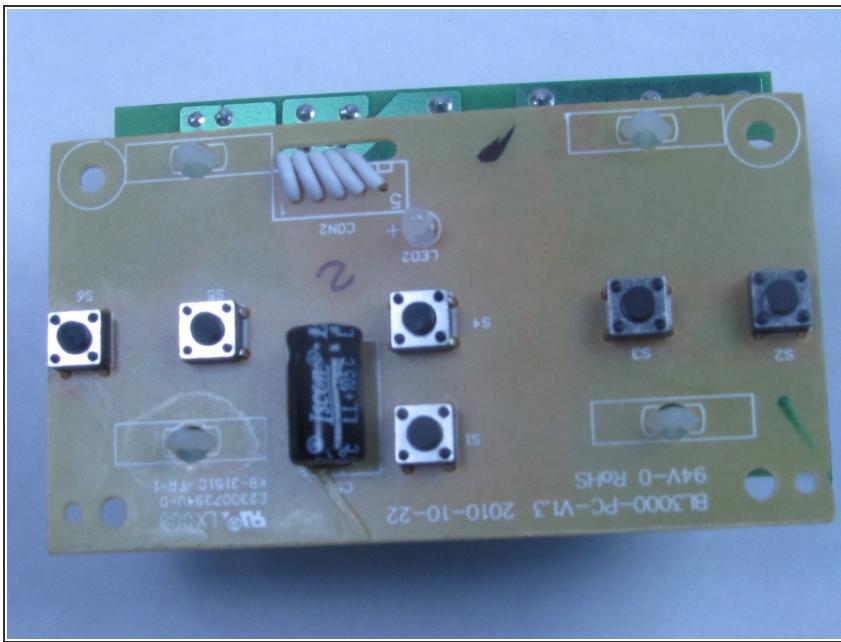

- Remove the four screws located on the circuit board.
 - Two are on the left side.
 - Two are on the right side.

Step 8

- Remove the following soldered connections with a soldering iron:
 - Motor wires
 - Power cord wires

Step 9

- Lift the circuit board straight up to remove it from the base.

To reassemble your device, follow these instructions in reverse order.
