🔧 TOOLS:

- [Spudger](#) (1)
- [T6 Torx Screwdriver](#) (1)

Step 1 — Battery

- Place the phone on a flat surface with the screen facing down.

- Remove the plastic backplate by pulling up on the bottom of the cover.

Step 2
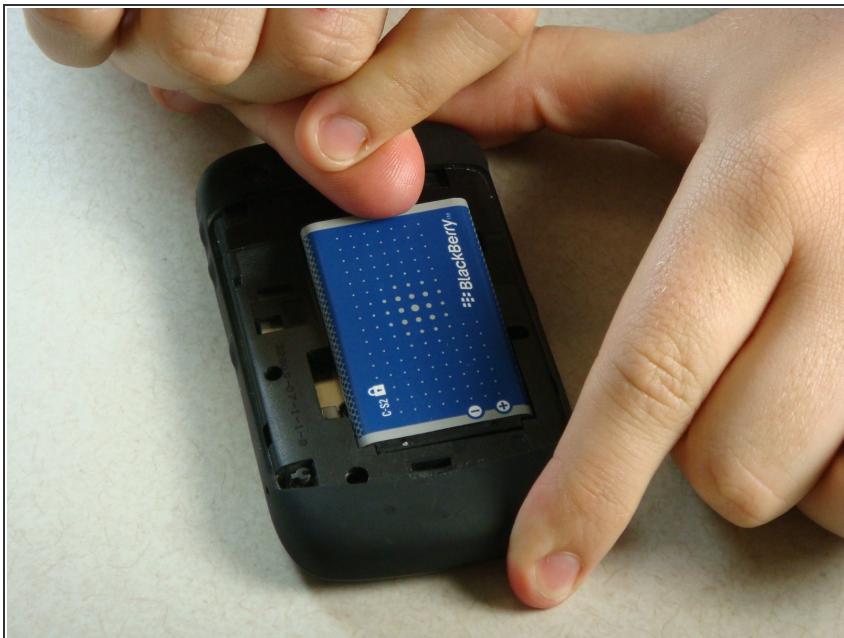

- Remove the battery by pulling up from the top of the battery.

This document was generated on 2019-09-22 10:04:17 PM (MST).

Step 3 — Keypad

- Remove the two screws midway up the phone on the left and right sides using a T6 Torx Screwdriver.

- Warning: One screw will have warranty tape covering the screw. Removing this screw will likely void the phones warranty.

Step 4
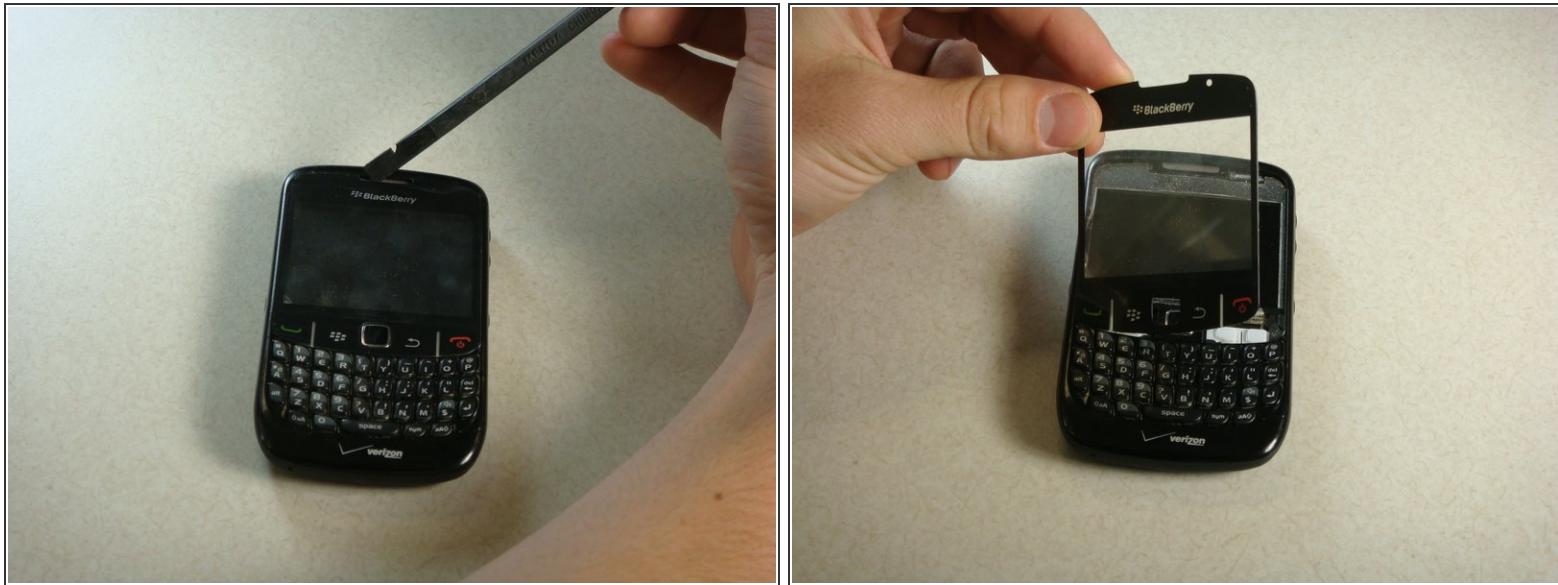

- Flip the phone over so the keyboard faces up.

- Insert a plastic spudger into the screen where speaker resides.

- I recommend going from the side. There are two layers to the cover. You need to make sure you get underneath the bottom layer if you plan on reusing this cover.

- Gently lift up plastic screen cover until screen cover separates from screen.

- Continue until screen cover is completely removed.

Step 5

- Insert the spudger into the top of the plastic siding on the front of the phone and lift up until the siding lifts up.

- Slide the tool around the entire perimeter of the phone until the plastic siding is completely removed.

Step 6

- The keyboard should slide off of the phone now that the plastic siding has been removed.

To reassemble the device, follow the instructions in reverse order.
