INTRODUCTION

Use this guide to replace the top motherboard on your device.

TOOLS:

- TR9 Torx Security Screwdriver (1)
- iFixit Opening Tools (1)

Step 1 — Bottom Circuit Board Access

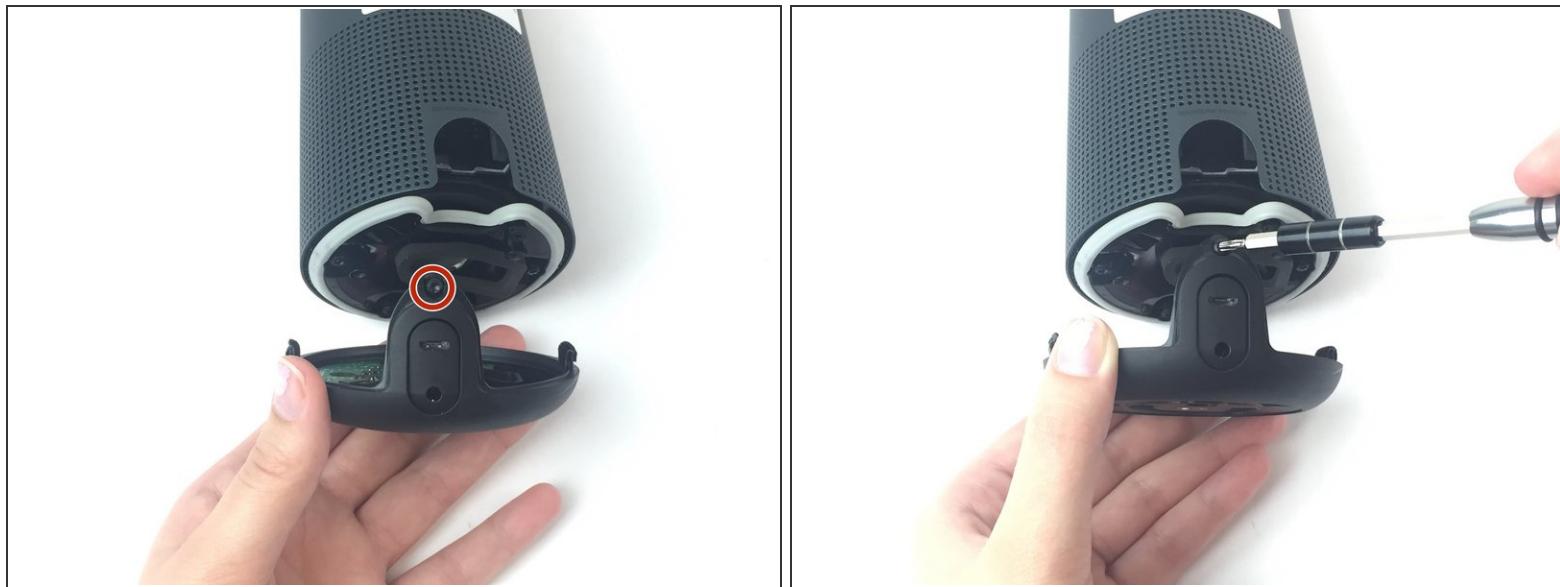

- Flip speaker over so that the bottom is facing up.
- Using the blue spudger, lift the gray foam up and slowly peel it off with your hand.

Step 2

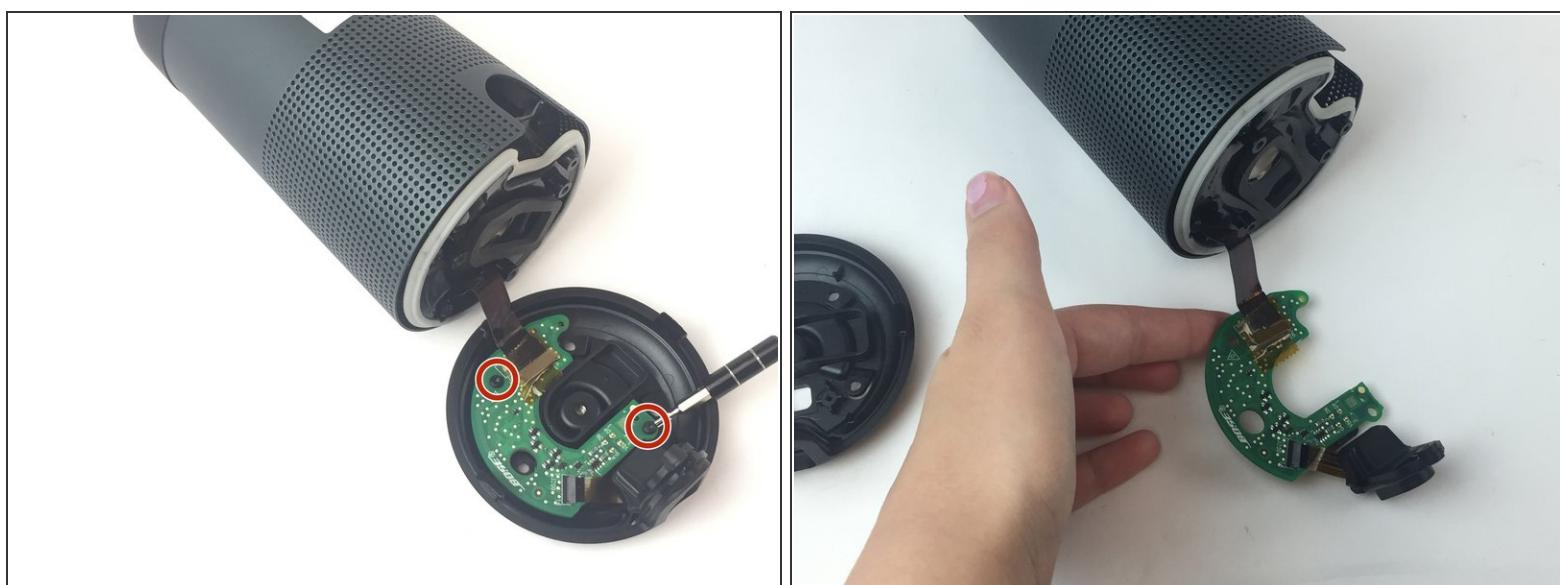

- Using the screwdriver, unscrew three screws.
- Detach the bottom cover from the rest of the speaker by pulling the two in opposite directions.

Step 3

- Remove the screw that is above the charging port.

Step 4

- Remove the two screws connecting the motherboard to the bottom cover of the speaker.
- Remove the bottom cover.

Step 5 — Top Circuit Board

- Using your hands, grip and separate the soft plastic and the metal casing away from each other with some small force.

Step 6

- Remove the (4) four screws shown around the top of the inside.
- (2) two of the screws are shown here, the other side will look the same.

Step 7

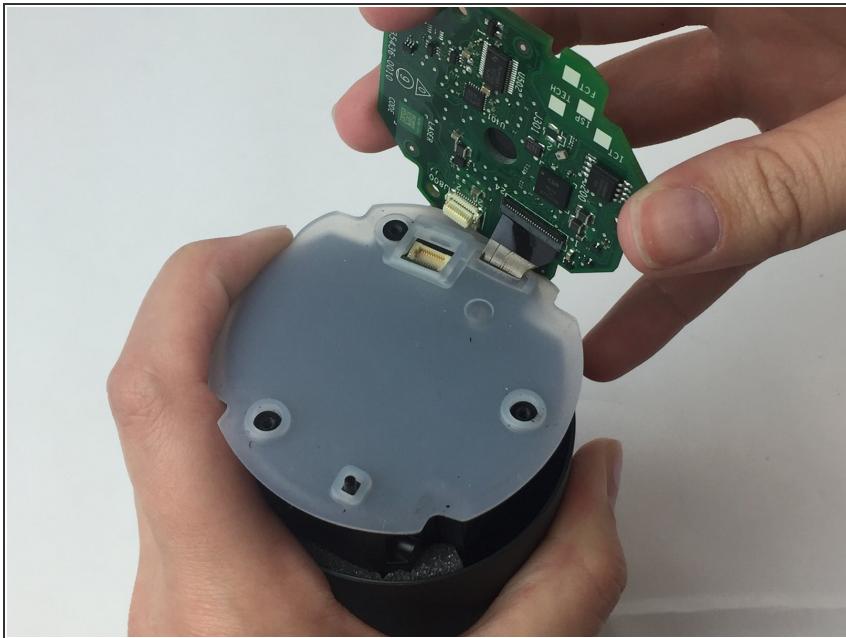

- Pry up and remove the soft plastic casing from the rest of the device.

Step 8

- Remove the 3 screws holding down the top circuit board.

Step 9

- Lift up and look on the underside of the circuit board.
- Using the plastic opening tool, pry open the wide clamp keeping a ribbon to the top circuit board. The top circuit board can now freely be removed from the device.

To reassemble your device, follow these instructions in reverse order.
