TOOLS:

- [Teflon tape](#) (1)
- [Smart Wrench](#) (1)

Step 1 — Remove Thumb Screw Drain

- Remove the thumb screw drain from the bottom of the compressor using a Smart Wrench.

i The thumb screw may not easily be removed due to corrosion.

Step 2 — Apply Teflon Tape

- Apply teflon tape to the replacement thumb screw drain.

i The teflon tape should be wound tightly around the entire threaded portion of the thumb screw drain.

→ When you reassemble the thumb screw drain on the compressor, make sure to fully tighten it using a Smart Wrench.
