Step 1 — Printer Cartridge

⚠ Disconnect printer from power before making any repairs.

● Remove the two screws on the back left of the printer using the Phillips 00 screwdriver.
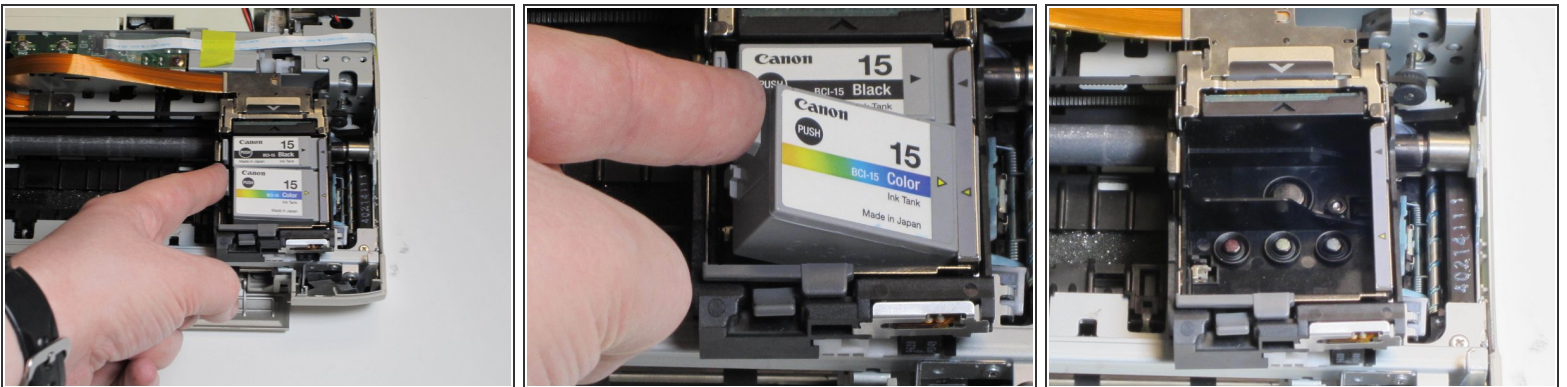

Step 2

● Push down and slide the tabs on both sides of the back of the printer away from the device to remove the tabs.

Step 3

- Insert the iFixit opening tool in the seam on the rear of the device and pry apart the outer plastic casing.

- *i* This will take a bit of force, so don't be alarmed if you have to pull very hard to open the casing.

Step 4

- *i* Remove the color cartridge on bottom first, then remove the black cartridge afterwards.

- Push the empty ink cartridge gently to the right to unlock.

- Slide the cartridge upward and away from the device to remove the cartridge.

Step 5

📌 The black cartridge always goes into the top slot, color cartridge in bottom slot.

● Install replacement cartridges by placing the cartridge in the port on the right hand side first, then push down to lock into place.

ⓘ Cartridge will click when inserted correctly.

To reassemble your device, follow these instructions in reverse order.
