INTRODUCTION

If you're encountering issues as a result from the scanner bed, this is where you will want to start.

To replace the glass scanner bed, you must:

- Remove the two plastic bars that holds the scanner bed in place.
- Carefully remove the glass scanner bed to add the replacement.

🔧 TOOLS:

- Metal Spudger (1)

## Step 1 — Canon CanoScan N670U Disassembly

- Open up your Canon CanoScan N670U to an upright position.

Step 2

- Turn your device so that you're facing the long side of the Canon CanoScan N670U.

- Locate the small crevice between the plastic components of the scanner bed and the scanner base.
Step 3

- Carefully insert a metal spudger tool in the crevice and slowly cut through the adhesive between the plastic components.

- ⚠️ You may cut small bits of the plastic as you're slicing the adhesive. Do not forcefully bend the plastic strip as you're cutting or it will snap.

Step 4

- Once the adhesive strip is sliced through, the plastic bar that is attached should release. Set aside the plastic bar.

Step 5

- Repeat steps 2-4 for the other side of the scanner.

Step 6

- Use your hands or a metal spudger tool to push the plastic bar at the bottom of the glass scanner bed forward until you can't push it any farther.

Step 7

- Insert the metal spudger tool underneath the glass scanner bed. The front of the scanner bed should be resting on top of the tool.

Step 8

- Slowly pull the glass scanner bed towards you and set the piece aside.

Step 9 — Glass Scanner Bed

- Replace your defective glass scanner bed with a new one.

To reassemble your device, follow these instructions in reverse order.
