

# Canon EOS Rebel T3i Motherboard Replacement

Replace the damaged motherboard.

Written By: Natalie Crock

## INTRODUCTION

Replacing the motherboard is a last resort for correcting water damage to the camera. This guide will help you remove it step-by-step.

### TOOLS:

- [Tweezers](#) (1)
- [Spudger](#) (1)
- [Phillips #000 Screwdriver](#) (1)

## Step 1 — Battery

- Locate the battery compartment on the bottom of the camera.

## Step 2

- Hook your finger onto the compartment door latch.
- Open the battery compartment door.

## Step 3

- Remove the battery from the compartment.

## Step 4 — Motherboard

- Peel away the rubber grip on the left side of the camera with your fingers.

*(i)* The grip should feel like a thick sticker as it comes off.

## Step 5

- Remove four 3 mm Phillips #000 screws on the left side of the camera.

## Step 6

- Remove four 3 mm Phillips #000 screws on the bottom of the camera.

## Step 7

- Remove two 3 mm Phillips #000 screws on the right side of the camera.

## Step 8

- Remove the back of the camera by lifting from both the left and right sides.

*(i)* Be careful not to break the orange and blue cables connecting the back panel of the camera to the motherboard.

## Step 9

- Disconnect the orange cable at the bottom of the camera by gently pinching with your fingers.

## Step 10

- Detach the blue cable by sliding the pointed end of a spudger between the motherboard and the silver prongs connected to the cable.

## Step 11

- Locate the cable on the top left corner of the motherboard.
- Pinch the round, white connector with tweezers and gently remove the cable.

## Step 12

- With tweezers, pinch the ends of the remaining orange ribbon cables, and gently pull these ends off of the motherboard.
- *(i)* Leave the other end of all ribbon cables attached to their components.

## Step 13

- Remove the five 4 mm Phillips #000 screws.

## Step 14

- Gently lift the motherboard away from the camera.

To reassemble your device, follow these instructions in reverse order.
