# INTRODUCTION

First, we will locate the battery/memory card hatch. Second, we will change the main batteries and orient them properly. Third, we will change the clock battery.

## TOOLS:

- iFixit Opening Tools (1)

## PARTS:

- AA Batteries (2)
- CR1220 watch battery (1)

## Step 1 — Locate and Open Battery Hatch

- The battery hatch is on the bottom of the camera.

⚠ CAUTION: Locate the switch to open the hatch and push gently toward the front of the camera. Too much force can break the hatch.

- While the switch is pushed forward, pull the cover away from the camera.

## Step 2 — Locate and Remove Camera Batteries

- This camera requires AA batteries. To remove batteries, simply allow them to fall out of the camera.

- The clock battery cover is shown here in the purple circle. Use a fingernail to lift the battery out of the camera.

## Step 3 — Replacing Camera Batteries

- When replacing the AA batteries, verify they are oriented correctly by following the (+) and (-) signs on the camera.

To install new batteries and reassemble your device, follow these instructions in reverse order.
