## INTRODUCTION

This guide will show you how to properly replace your Flash Assembly on your Canon PowerShot SD1300 IS.

### TOOLS:

- [JIS Driver Set \(1\)](#)  
J00
- [iFixit Opening Tools \(1\)](#)

## Step 1 — Flash Assembly

- Remove the two 2mm J00 screws on the right exterior.
- Remove a single 4 mm J00 on the bottom exterior.
- Remove a single 3mm J00 on the left exterior.

## Step 2

- Once the front shell of the camera is removed the back shell should slide off just the same.

## Step 3

- Remove a 3mm J00 screw from behind wires under the flash.

## Step 4

- Use plastic opening tool to remove the screen to gain access to the screws to remove the Flash Assembly.

## Step 5

- Remove the two 3mm J00 screws under the screen.
- Remove the 4mm J00 screws under the screen.
- The flash assembly is now released and should be able to be removed from the front side of the camera.

To reassemble your device, follow these instructions in reverse order.
