INTRODUCTION

The shutter button is one of the most commonly used buttons on a camera. Therefore, it is also the most likely to break.

TOOLS:

- [Phillips #00 Screwdriver](#) (1)

Step 1 — Battery

- Slide open the battery cover.
- Push the small orange tab to the side so the battery can be removed.

Step 2

- Slide the battery out of the battery compartment.

Step 3 — Front and Rear Casing

- Two Phillips screws need to be removed using a #00 Phillips screwdriver. The upper screw is under the USB port cover, which can simply be pulled away gently from the casing. the lower screw is visible on the panel.
- The screws are different sizes. The .125 inch screw is located under the USB port cover. The 0.85 inch screw goes in the lower hole on the panel.

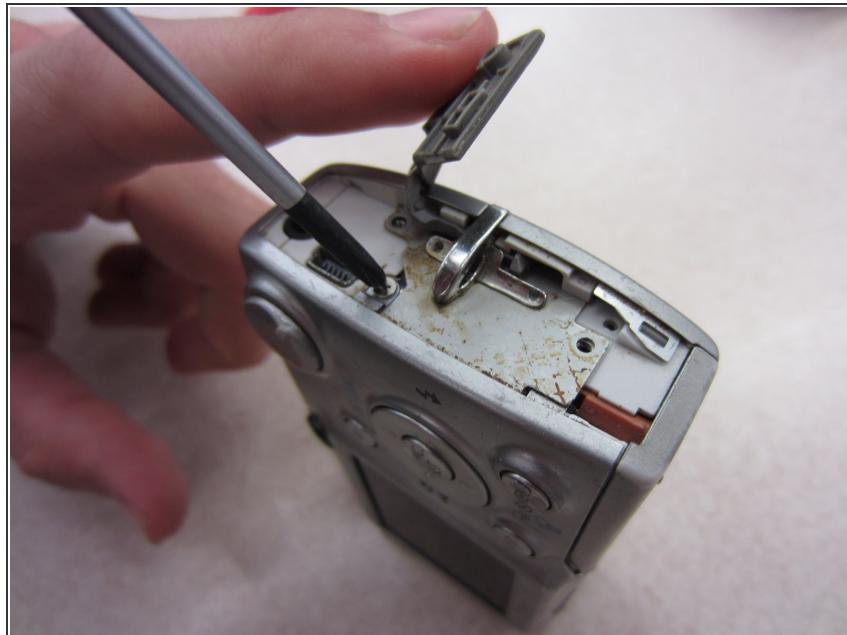

i When looking at the back of the camera, these two screws are on the right panel of the camera.

Step 4

- Remove the right side cover from the camera casing.

Step 5

- Remove a .07 inch Phillips screw using a #00 Phillips screwdriver.

Step 6

- Remove two .085 inch Phillips screws from the left side of the camera using a #00 Philips screwdriver.

Step 7

- Remove the left side cover from the camera.

Step 8

- Remove three .15 inch Phillips screws from the bottom of the camera using a #00 Phillips screwdriver.

Step 9

- Once the casing is unscrewed, hold the camera with one side facing down, and lift the opposite face of the casing to open it.
- Remove the internal camera components and layout out all pieces on a clean surface.

(i) The front and back cover may require gentle rocking to remove.
