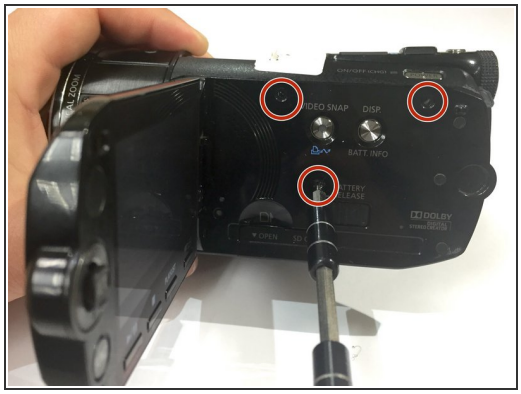
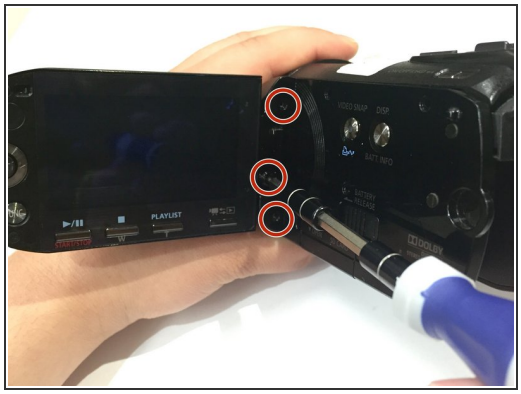
Step 1 — LCD Screen

- Turn the camcorder upside down and remove the three 3x4 mm Phillips screws securing the black plastic case.

Step 2





- Flip open the LCD screen.
- Remove the three 3x4 mm Phillips screws securing the black panel plastic case.
- From the inner corner in between the panel and the LCD screen, remove the two 2x2.5 mm Phillips screws and the 3x4 mm Phillips screw.

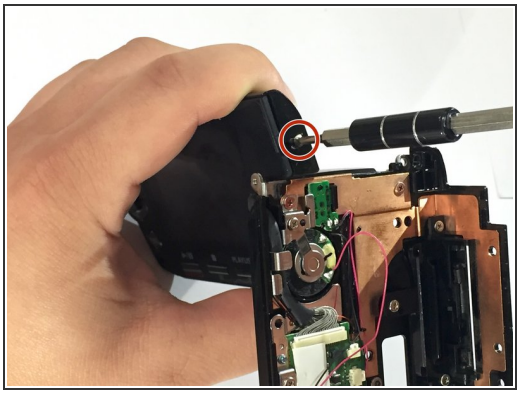
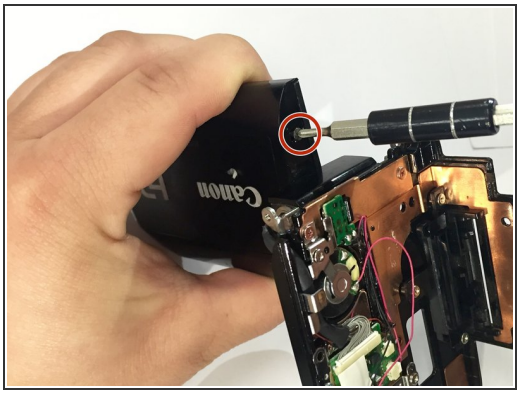
Step 3

- Using your fingers, remove the black plastic covering. Underneath the covering, you will find a screw hinge.
- Remove the 2x2.5 mm Phillips screw located at the top of the screw hinge.
- Using your fingers, remove the panel from the base of the camcorder.

Step 4





- Remove the 2x2.5 mm screw from the right side of the plastic case surrounding the LCD screen.
- Flip over the plastic case and remove the 2x2.5 mm screw.
- Remove the two 2x2.5 mm screws from the front plastic case.

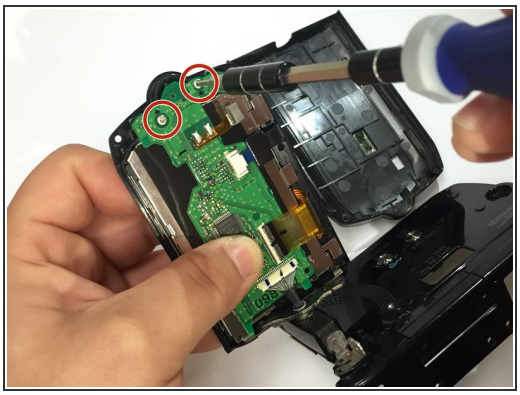
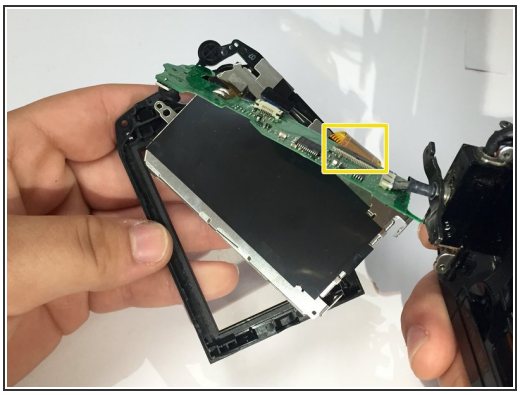
Step 5

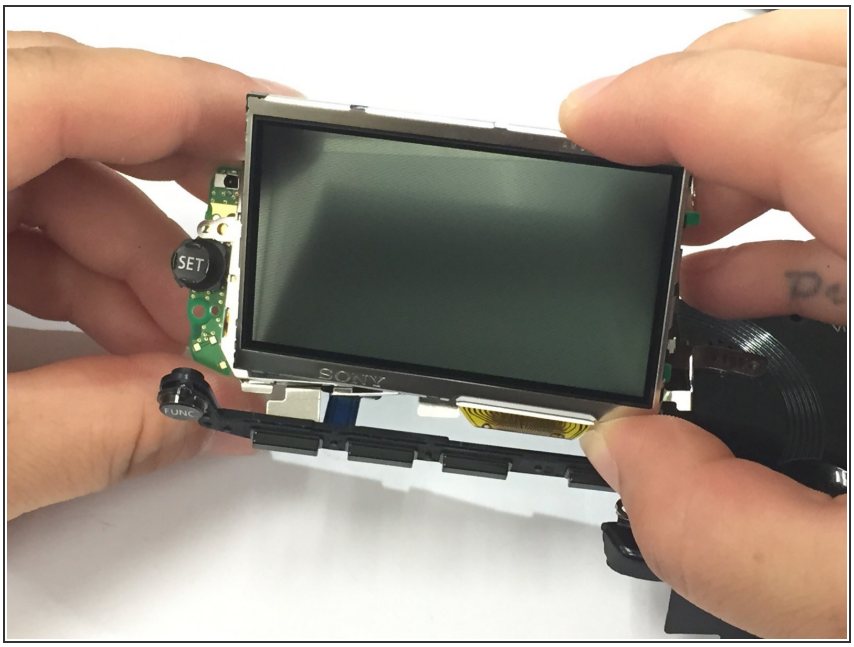




- Using a plastic opening tool, pry off the plastic case surrounding the LCD screen.
- Remove the two 1x2.5 mm screws from the motherboard on the back of the LCD screen.
- Gently pull off the motherboard from the LCD screen.

⚠ Be aware of the orange tab when seperating the motherboard from the LCD screen.

Step 6



- Using your fingers, remove the LCD screen.

To reassemble your device, follow these instructions in reverse order.
