## INTRODUCTION

Without a working battery, a laptop becomes anchored to a wall outlet. That's not very mobile! In this guide, you will learn how to remove and replace the battery.

## Step 1 — Battery

- Shutdown the computer.
- Remove all external devices.
- Unplug the power, and any other cords, from the laptop.
- Turn the laptop upside down, with the front towards you.

## Step 2

- Slide the battery release latch to the left until the battery pops up.
- Lift the front edge of the battery pack and swing it back to remove it.

★ When reassembling, first align the back of the battery with the chassis, then press the front downwards until it latches.
