

Computer keyboard Teardown

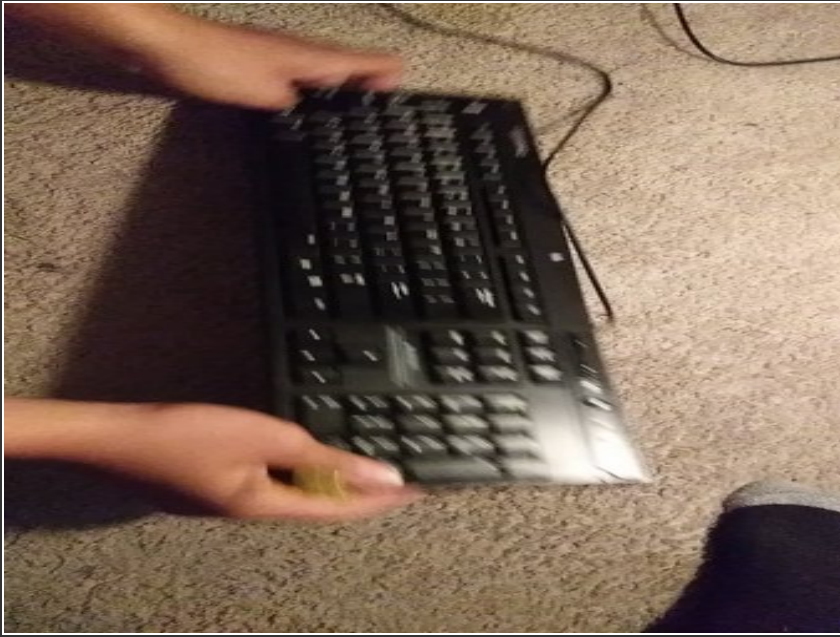

Knowing how to take apart a keyboard and what happens when you are using it.

Written By: Tomasi Moala

INTRODUCTION

This is what's inside the keyboard once you unscrew the back and open it. The model you see here has silicone keys. (Silicone and under are three layers/screens)

Step 1 — Unscrew all the screws

- Unscrew all the screws on back. On the back of the keyboard.

Step 2 — Silicone keys (rubber and three screens)

- Once you have opened the keyboard it should look somewhat like this.

To reassemble your device, follow these instructions in reverse order.
