Step 1 — Blender Jar

- Identify the Jar of the Mini-Prep

Step 2

- Place the Jar on top of the base by taking the bottom of jar and placing it through the blade accelerator.

Step 3

- Notice that the written instructions on the top of the base remind the user to turn counter clockwise to lock the Jar into place.
- Move the jar clock wise until it locks into place. Then to secure it turn it counter clock wise so that the handle sticks out the front of the blender.

Step 4

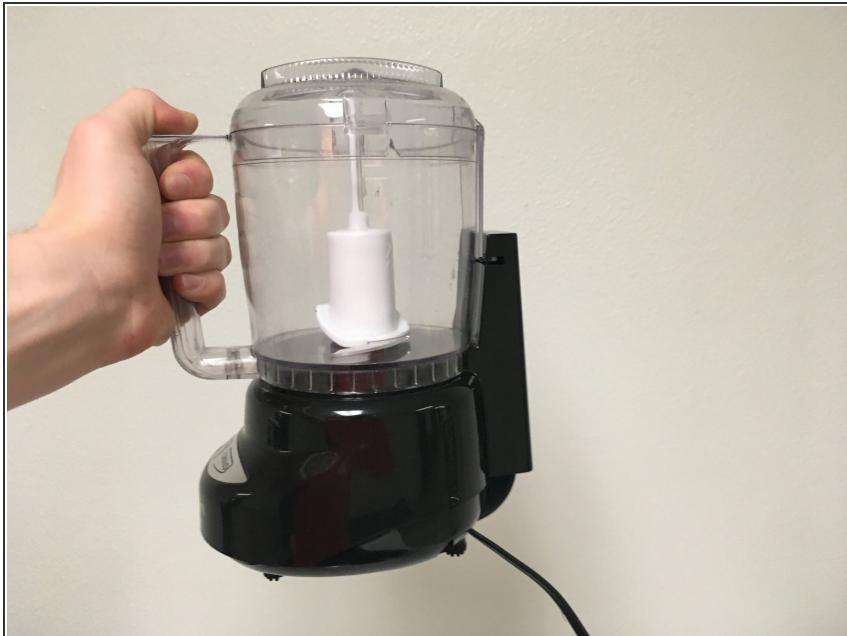

- Place the blade inside using the jar, and on top of the motor propeller. [this is what spins the blade]

Step 5

- first place the lid on top with the plastic attachment on the back right side.
- Once the lid is on, rotate the lid counter clockwise so that it locks into the black locking mechanism in the back.
- This secures the lid on top of the jar.

Step 6

- Ta-da! You have officially learned how to replace the jar section of the blender.

To reassemble your device, follow these instructions in reverse order.
