

DJI Phantom 4 Advanced Shell Replacement

How to remove the shell on a DJI Phantom 4 Advanced.

Written By: David Hudson

 **TOOLS:**

- [2mm Hex Key \(1\)](#)
- [Metal Spudger \(1\)](#)
- [1.5mm Hex Screwdriver \(1\)](#)
- [JIS #000 Screwdriver \(1\)](#)

Step 1 — Propeller

- Use your finger tips to pinch the damaged propeller.
- Twist the propeller counterclockwise and pull up to remove.

Step 2 — Shell

- Remove the eight 7 mm hex screws by turning counterclockwise with a 2 mm hex bit.

Step 3

- Pry the LED motor covers off with a metal spudger.
- *i* The prying location is marked by an indent that points outward from the arm.

Step 4

- Pry the paper covering off the four corners with a metal spudger.

Step 5

- Remove the twelve 8.7 mm hex screws with a 2 mm hex bit from the motor bases.

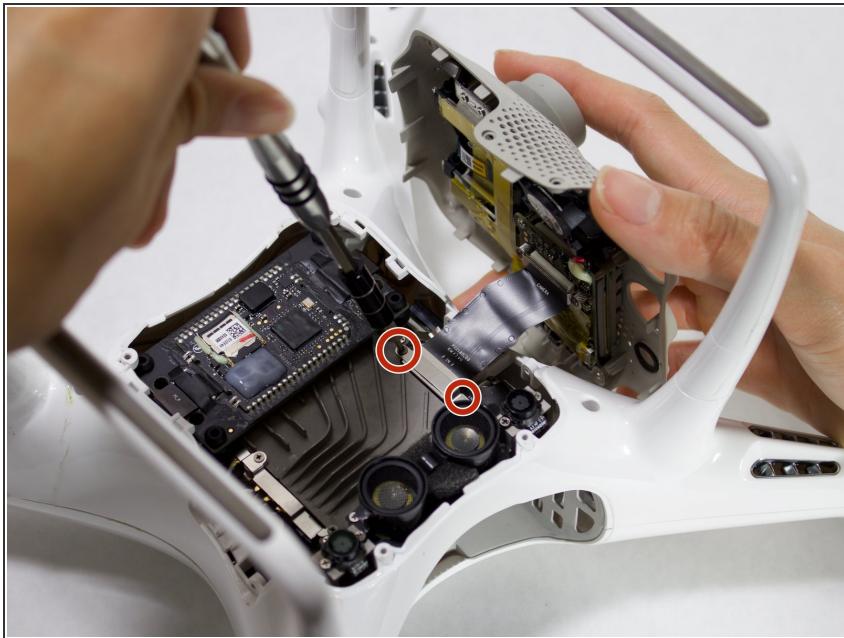

Step 6

- Flip the drone on its back
- Remove the eight 4.5 mm hex screws by turning them counterclockwise with a 1.5 mm hex bit.
- Separate the mesh from the drone by pulling up gently and rocking left to right.

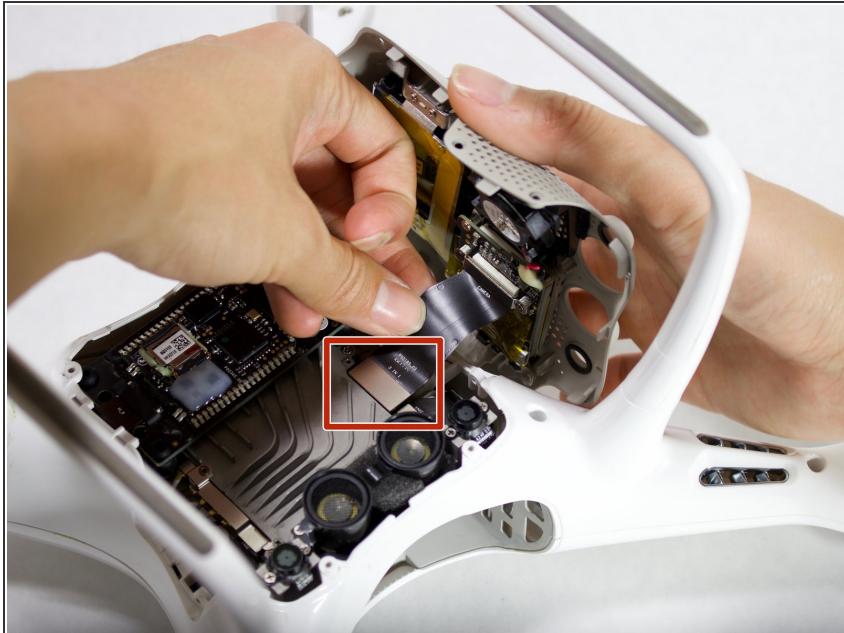

⚠ The cable connects from the camera to the drone. Pulling up could rip the connection. Tilt the mesh 90 degrees towards the cable.

Step 7

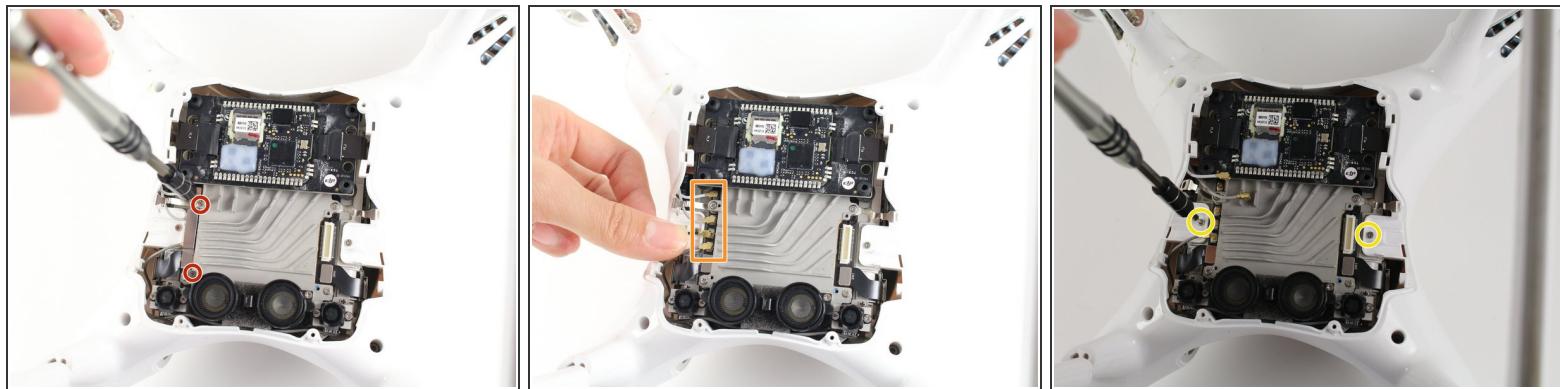

- Remove two 1.2mm screws using the JIS #000 bit from the camera cable retaining bracket.

Step 8

- Lift the camera connector at one end with your hand and remove the mesh.

Step 9

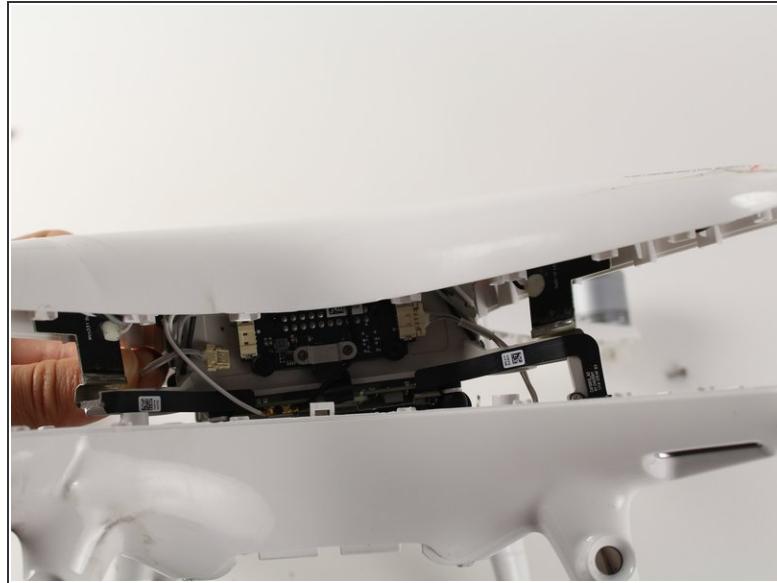

- Remove the two 1.2 mm screws using a JIS #000 bit from the antenna retaining bracket.
- Pull the four U.FL antennae up.

⚠ The U.FL antenna connectors are fragile.

- Remove the two 4 mm screws using a JIS #000 bit.

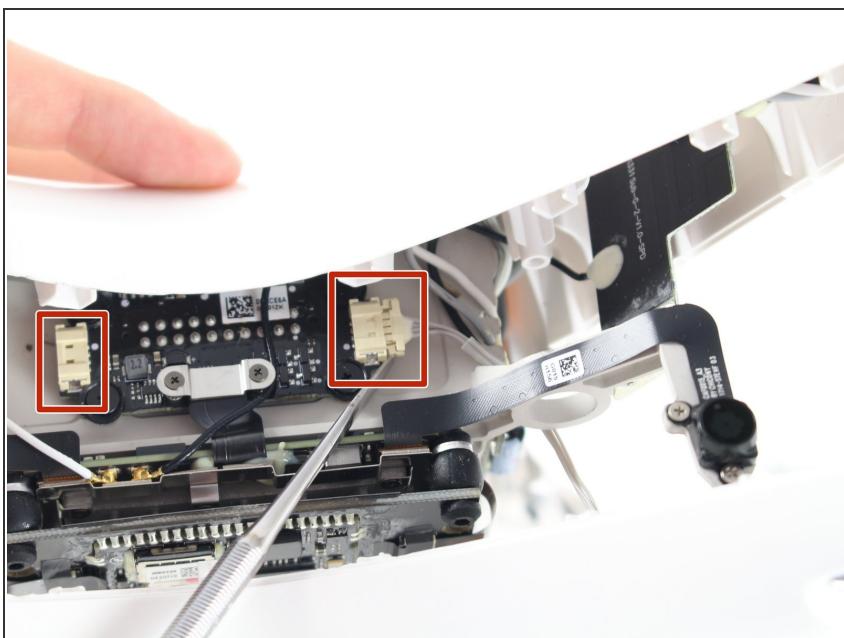

Step 10

- Pry apart the clamshell at the motor end.
- Separate the clamshell.

⚠ Two wires connect from the lower frame to the upper frame at the front of the drone. Pulling the clamshell apart hard may damage the connectors and wires.

Step 11

- Press the connector tabs with a spudger and pull on the wire simultaneously.
- Remove the shell from the rest of the drone.

To reassemble your device, follow these instructions in reverse order.
